## Contents

1 Options  
### 1.1 Optional Subjects  
- CTS: Communication Technology and Communication Systems  
  - Fundamentals of Signal Processing  
  - Microwave Engineering I  
  - Information Theory I: Fundamentals  
  - Project Seminar Communication and Sensor Systems  
  - Advanced Seminar on Networking, Security, Mobility, and Wireless Communications  
  - Wireless Network for Emergency Response: Fundamentals, Design, and Build-up from Scratch  
  - Communication Networks I  
  - Seminar Telecooperation  
  - TK1: Distributed Systems and Algorithms  
  - Multimedia Communications Lab I  
  - Multimedia Communications Project I  
  - Digital Signal Processing  
  - Mobile Communications  
  - Convex Optimization in Signal Processing and Communications  
  - MIMO - Communication and Space-Time-Coding  
  - Seminar Smart City  
  - IoT and wireless protocols in embedded systems  
  - Routing, Switching and Forwarding  
  - Communication Technology II  
  - Information Theory II: Networks  
  - Speech and Audio Signal Processing  
  - Digital Signal Processing Lab  
  - Multimedia Communications Lab II  
  - Multimedia Communications Project Seminar II  
  - Project Seminar Wireless Communications  
  - Multimedia Communications Seminar II  
  - Adaptive Filters  
  - Advanced Topics in Statistical Signal Processing  
  - Antennas and Adaptive Beamforming  
  - Microwave Engineering II  
  - Multimedia Communications Project II  
  - Project Seminar Communication and Sensor Systems  
  - Project Seminar Communication and Sensor Systems  
  - Project Seminar Communication and Sensor Systems  
  - Project Seminar Emerging Topics in Sensor Array and Multichannel Processing  
  - Internet - Practical Course Telecooperation  
  - Mobile Networking  
  - Practical Project Telecooperation  
  - Network, Traffic and Quality Management for Internet Services  
  - Multimedia Communications Seminar I  
  - Software Defined Networking  
  - Ubiquitous computing in business processes  
  - Radar Techniques

Automotive Mechatronics and Assistance Systems ............................... 202
Tutorial Automotive Engineering ......................................................... 204
Optical Technologies in Car Lighting .................................................. 205
Technical Mechanics for Electrical Engineering ................................. 206
Project seminar Applications of Lighting Engineering ......................... 208
Project seminar Advanced Applications of Lighting Engineering .......... 209
Project seminar Special Applications of Lighting Engineering ............ 210
Combustion Engines II .................................................................... 211
Fundamentals of Navigation I ............................................................. 213
Space Debris - Risks, Surveillance and Mitigation ................................. 214
Tutorial Advanced Cax Methods ......................................................... 216
Automated Driving ......................................................................... 217

2.2 Optional Subjects AIS-IA: Intelligent Systems and Algorithms

Introduction to Artificial Intelligence .................................................... 219
Information Management .................................................................. 221
Efficient Graph Algorithms ................................................................. 224
Natural Language Processing and the Web ........................................... 226
Data Mining and Machine Learning .................................................... 228
Deep Learning for Natural Language Processing ................................. 230
Fuzzy Logic, Neural Networks and Evolutionary Algorithms ............... 231
Matrix Analysis and Computations ...................................................... 233
Introduction to Scientific Computing with Python ............................... 235
Project Seminar Hardware for Neural Networks .................................. 237
Web-Mining .......................................................... 238
Practical Lab Algorithms ........................................ 241
Practical Course in Artificial Intelligence ..................... 242
Seminar Data Mining and Machine Learning ................... 244
Statistical Machine Learning ..................................... 246
Project Lab Deep Learning in Computer Vision ............... 248
Learning and Educational Technologies ......................... 249
Algorithmic Modelling ........................................... 251
Practical Lab Advanced Algorithms ............................... 253
Concepts and Technologies for Distributed Systems and Big Data Processing 254
Foundations of Language Technology ............................ 256
Bioinformatics ...................................................... 258
Optimization Algorithms .......................................... 259
Ambient Intelligence ............................................... 260
Automata, Formal Languages and Decidability ................. 262
Propositional Logic and Predicate Logic ......................... 264
Deep Learning: Architectures & Methods ....................... 266
Reinforcement Learning: From Foundations to Deep Approaches 268
Text Analytics ....................................................... 270
Extended Seminar - Systems and Machine Learning ........ 271
Algorithmic modeling for creating schedules .................. 273
Machine Learning and Deep Learning for Automation Systems 275
Deep Generative Models ......................................... 277
Fundamentals of Reinforcement Learning ....................... 278
Introduction to Artificial Intelligence ............................ 280
Introduction to Quantum Computing ............................. 282
2.3 Optional Subjects AIS-IE: Information Processing in Electrical Power Engineering 284
Electrical Power Engineering ........................................ 284
Power Systems I ..................................................... 286
Electrical Machines and Drives .................................... 287
Power Electronics ................................................... 289
High Voltage Technology I ......................................... 291
Advanced Power Electronics ....................................... 293
Real Time Applications and Communication with Microcontrollers and Programmable Logic Devices 295
Energy Converters - CAD and System Dynamics ............. 297
Application, Simulation and Control of Power Electronic Systems 299
Energy Management and Optimization .......................... 301
Introduction to Data-Based Modelling ........................... 303
Elektrische Energieversorgung II / Power Systems II ........... 305
Power Laboratory I .................................................. 307
Power Laboratory II .................................................. 309
Electromagnetic Compatibility ...................................... 310
Large Generators and High Power Drives ....................... 312
High Voltage Switchgear and Substations ....................... 314
High Voltage Technology II ....................................... 315
New Technologies of Electrical Energy Converters and Actuators 317
Design of Electrical Machines and Actuators with Numerical Field Calculation 319
Machine Learning & Energy ....................................... 320
Electric Railways ..................................................... 322
Physics and Technology of Accelerators ......................... 324
Virtual Prototyping of Electric Drives ............................ 325
2.4 Optional Subjects AIS-MT: Medical Technics 327
Visualization in Medicine .......................................... 327
Measurement Technology .......................................... 329
Measurement Technology Lab .................................................. 330
Bioinformatics ................................................................. 332
Current Trends in Medical Computing ................................. 333
Microsystem Technology .................................................... 335
Sensor Technique ............................................................ 336
Deep Learning for Medical Imaging .................................... 338
Artificial Intelligence in Medicine Challenge ...................... 339
Project Seminar Biophotonics ............................................. 340
Fuzzy Logic, Neural Networks and Evolutionary Algorithms .... 342
Project Seminar Systems of Biomedical Engineering .......... 344
Evolutionary Systems - From Biology to Technology ........... 345
Computational Modeling for the I GEM Competition .......... 346
Signal Detection and Parameter Estimation ....................... 348
Computer-aided planning and navigation in medicine .......... 350
Medical Image Processing .................................................. 352
Analysis and Synthesis of Human Movements I ................. 354
Deep Generative Models .................................................... 355
Basics of Biophotonics ...................................................... 356
Artificial Intelligence in Medicine ....................................... 358
Bioinformatics I ............................................................... 360

2.5 Optional Subjects AIS-CSR: Control Systems and Robotics

Foundations of Robotics ..................................................... 362
System Dynamics and Automatic Control Systems II ........... 364
Laboratory Matlab/Simulink I ............................................. 366
Laboratory Control Engineering I ....................................... 367
Integrated Robotics Project 1 ............................................. 368
Integrated Robotics Project 2 ............................................. 370
Laboratory Control Engineering II ..................................... 372
Control of Drives ............................................................ 373
Laboratory Matlab/Simulink II ......................................... 375
Multivariable and Robust Control .................................... 376
Modeling, Simulation, and Optimization ............................ 378
System Dynamics and Automatic Control Systems III ......... 380
Project Course Control Engineering ................................. 382
Project Seminar Robotics and Computational Intelligence .... 383
Practical Training with Drives ........................................... 385
System Dynamics and Automatic Control Systems I ........... 387
Measuring Technique ....................................................... 389
Electromechanical Systems I .............................................. 391
Introduction to Electrodynamics ...................................... 392
Railway Vehicle Engineering ............................................ 394
Data-driven Modelling of Dynamic Systems ...................... 395
New Technologies of Electrical Energy Converters and Actuators .... 397
Design of Electrical Machines and Actuators with Numerical Field Calculation ........ 399
Actuators for Mechatronic Systems Laboratory ................... 400
Planning and Application of Electrical Drives (Drives for Electric Vehicles) ... 401
Project Seminar Automatic Control Systems ...................... 402
Project Course Practical Application of Mechatronics .......... 403
Time domain methods for electromagnetic field simulation .... 404
Machine Learning and Deep Learning for Automation Systems . 405
Robot Learning: Integrated Project - Part 2 ...................... 408
Computational Engineering and Robotics ......................... 409
Technical Mechanics for Electrical Engineering ................. 411

Language: German
Module owner: Prof. Dr.-Ing. Abdelhak Zoubir

1 Teaching content
The course covers the following topics:
- The basic concepts of stochastic
- The sampling theorem
- Discrete-time noise processes and their properties
- Description of noise processes in the frequency domain
- Linear time-invariant systems: FIR and IIR filters
- Filtering of noise processes: AR, MA, and ARMA models
- The Matched filter
- The Wiener filter
- Properties of estimators
- The method of least squares

2 Learning objectives
After successful completion of the module, students understand the basics of probability theory so that they can apply them to stochastic signals in the course of the lecture. In particular, students will be able to describe stochastic processes in the time and frequency domains and analyze their interaction with linear time-invariant systems. Students know the basic properties of estimators. They are able to design optimal filters and apply the method of least squares to problems.

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS)
The examination is a written exam (duration: 120 minutes). If less than 11 students are registered for the course, the examination will be an oral one (duration: 30 min.). The type of examination will be announced at the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
• Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
BSc ETIT, BSc MEC

8 Grade bonus compliant to §25 (2)

Module owner
Prof. Dr.-Ing. Rolf Jakoby

1 Teaching content
Electromagnetic (EM) Properties of Materials: 1.) Microscopic Scale, including energy levels and energy bands, charge carriers and conduction; 2.) Macroscopic Scale, including plane waves in homogeneous lossy media, electromagnetic properties of low-loss media (lossy dielectrics), skin effect in good conductive media (metals & alloys), penetration depth in biological tissues and specific absorption rate (SAR), oblique incidence of plane waves at a dielectric interface, mechanisms of polarization in dielectrics and its applications, losses in dielectrics, applications of (electro)ceramics; Interaction between Electromagnetic Waves and Biological Materials (Bioelectricity, Dielectric Dispersion in Tissues, Relaxation and Resonances, Microwave Dosimetry, SAR and thermal considerations, Exposure of Body to Cell Phone and Base Station)

Passive RF Circuits with R-, L- and C-Lumped Elements: Resonant and Equivalent RLC Circuits, Graphical Representation of RF Circuits with the Smith Chart, Lumped-Element Impedance Matching.

Theory and Applications of Transmission Lines: Propagation Modes in Transmission Lines, General Transmission-Line Equations (lumped-element model, transmission-line parameters, wave propagation along a transmission line); Wave Characteristics on Transmission Lines from input-port and output-port parameters of the line; Lossless Transmission Elements as Circuit Elements; Transmission-Line Terminations; Transmission-Line Impedance Matching, including quarter-wave transformer, impedance of a half-wave section and single-stub and double-stub matching; Left-Handed Metamaterial Lines and Dispersion.

Scattering-Matrix Formulation of Microwave Networks: Scattering-Matrix Formulation; Characterization of Microwave Networks; Input and Output Reflections of Unmatched Microwave Networks; Concatenation and Transformations of Scattering Matrixes; ABCD-Matrix Formulation.

N-Port Microwave Devices: Power Divider and Power Combiner: Three-Port Power Divider (Lossless T-junction Power Divider, Symmetrical, Resistive T-Junction Power Divider, Wilkinson Power Divider); Four-Port Power Divider (Coupled Line Directional Coupler, The Quadrature Hybrid, The 180°-Hybrid Coupler); In-plane N-Port Compound Devices with examples of Interference-based RF Switch and Butler Matrix.

Waveguides and Planar Transmission Lines: Quasi-Optical Approach; General Solution from Maxwell’s Equations; Parallel-Plate Waveguide; Rectangular Waveguide; Attenuation in Waveguides (Dielectric Losses, Conductor Losses); Microstrip Lines.

2 Learning objectives
Students understand the essentials of RF engineering: passive RF components and circuits with discrete elements and line components, line theory, application of scattering matrices to describe passive and active RF components, waveguides: theory, propagation and losses.

3 Recommended prerequisites for participation
Communications engineering, fundamentals of technical electrodynamics

4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination
6 **Grading**
Module exam:
  - Module exam (Technical examination, Examination, Weighting: 100 %)

7 **Usability of the module**
BSc ETiT, Wi-ETiT

8 **Grade bonus compliant to §25 (2)**

9 **References**
Script is in English and will be electronically hand out at the beginning of the lecture; Literature will be recommended in first lecture

Module owner
Prof. Dr. techn. Heinz Köppl

1 Teaching content
This lecture course introduces the fundamentals of information theory, network information theory and coding theory.
Outline:
information, uncertainty, entropy, mutual information, capacity, differential entropy, typical sequences, Gaussian channels, basics of source and channel coding, linear block codes, Shannon's source coding theorem, Shannon's channel coding theorem, capacity of Gaussian channels, capacity of bandlimited channels, Shannon's bound, bandwidth efficiency, capacity of multiple parallel channels and waterfilling, Gaussian vector channel, Multiple Access Channel, Broadcast Channel, rate region.

2 Learning objectives
Upon completion of the module, students will have an understanding of the fundamentals of classic information theory.

3 Recommended prerequisites for participation
Basic knowledge of probability theory

4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module
BSc ETiT, BSc iST, MSc iCE, BSc Wi-ETiT, BSc/MSc CE

8 Grade bonus compliant to §25 (2)

1 Teaching content
Investigating and solving specific problems concerning communication and sensor systems (Problems concerning communications engineering, microwave technology, signal processing, sensor networks etc. are possible, topics will be defined out of the recent research topics of the involved labs), working on a given task by one's own, organizing and structuring of a seminar task, searching and analyzing of scientific reference publications for a given task, summarizing achieved results and conclusions by means of a written report, presenting achieved results and conclusions and defending them in an oral discussion including audience.

2 Learning objectives
Upon successful completion of the module, students will be able to:
- the ability to apply methods of communication and sensor systems to practical problems
- deep and special knowledge in a particular field of communication and sensor systems (communications engineering), RF technology, signal processing, sensor networks
- the skills to find, analyze and evaluate scientific reference papers for a particular topic
- the capability to summarize the achieved scientific findings in the form of a concise report
- the ability to present and discuss achieved results in the form of a presentation in front of an audience

3 Recommended prerequisites for participation
Previous knowledge in chosen discipline, e.g. communication technology, signal processing, microwave technology, sensor networks

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
BSc ETiT, BSc Wi-ETiT, BSc CE, BSc iST, BSc MEC

8 Grade bonus compliant to §25 (2)

9 References
Will be announced in the lecture

1 Teaching content
The Advanced Seminar on Networking, Security, Mobility, and Wireless Communications covers current research that is considered highly relevant for the future development of the given topic areas. Goal of the seminar is to explore the aforementioned research area by studying, critically analyzing and discussing, summarizing, and presenting selected first-rate research articles. Deliverables are a short presentation, a final presentation, and a seminar paper.

The prospective topics for the advanced seminar will be derived from the current research topics of the SEEMOO group.

Course contents:
- Independent exploration of a topic in the area of networking, security, mobility, and wireless communications (typically in english)
- Own, enhanced literature study
- Interpretation and classification of the literature study
- Preparation of an introductory talk as well as a final talk including presentation slides
- Presentation of both talks for a heterogenous audience (experts/non-experts)
- Technical discussion after the talks
- Feedback to the speakers and the talks (including presentation skills) and technical content
- Understanding the process of scientific work as well as of scientific publications

2 Learning objectives
After successfully attending the course, students are able to independently explore new topics in a scientific manner. They have acquired detailed knowledge on selected mechanisms, methodologies as well as applications for the investigated topic area. Techniques such as thoroughly surveying literature, critical discussion and analysis of scientific articles, and the presentation of the obtained results are demonstrated by the students. Students can defend their work against a critical technical audience.

3 Recommended prerequisites for participation
Successfull participation of an lecture of SEEMOO

4 Form of examination
Course related exam:
- [20-00-0549-se] (Study achievement, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:
- [20-00-0549-se] (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
B.Sc. Informatik
M.Sc. Informatik
M.Sc. Wirtschaftsinformatik
B.Sc. Psychologie in IT
Joint B.A. Informatik
B.Sc. Sportwissenschaft und Informatik

Can be used in other degree programs.

8 Grade bonus compliant to §25 (2)

9 References
Will be announced in seminar.

1 Teaching content
The communication capabilities among the population is of utmost importance to respond to crises. This course will discuss how to build wireless communication systems from scratch, i.e. under the assumption that no communication infrastructure is left intact as a result of the crisis. The course introduces the theoretical basis from the fields of amateur radio as well as communication systems. It deepens these fields with the knowledge to design and build communication networks for times of crisis. The discussed technologies will span from local to global wireless communications without need of further infrastructure. Theoretical exercises as well as experimentation, the design and building of electrical circuits and the analysis of wireless technology under laboratory conditions deepen the understanding of the subject.

Course contents:
- Signals, signal propagation, antennas, basics of electrical engineering
- Modulation schemes in analog and digital systems (OFDM, ATV/SSTV, Packet Radio, SSB, ...)
- System aspects for communication in times of crisis
- Design and practical realization from scratch of wireless communication systems

2 Learning objectives
After successfully attending the course, students have theoretical and practical knowledge in the area of wireless and infrastructureless communication for emergency response. They understand the most important physical and electrotechnical basics of wireless communications and know wireless transmission mechanisms in theory and practice. They are able to build a wireless communication system from scratch and operate it. The students acquire competences in the area of amateur radio and software defined radio technology.

3 Recommended prerequisites for participation

4 Form of examination
Course related exam:
- [20-00-0780-iv] (Technical examination, Oral/written examination, Default RS)

1 Teaching content
In this class the technologies that make today’s communication networks work are introduced and discussed. This lecture covers basic knowledge about communication networks and discusses in detail the physical layer, the data link layer, the network layer and parts of the transport layer. The physical layer, which is responsible for an adequate transmission across a channel, is discussed briefly. Next, error control, flow control and medium access mechanisms of the data link layer are presented. Then the network layer is discussed. It comprises mainly routing and congestion control algorithms. After that basic functionalities of the transport layer are discussed. This includes UDP and TCP. The Internet is thoroughly studied throughout the class.

Detailed Topics are:
- ISO-OSI and TCP/IP layer models
- Tasks and properties of the physical layer
- Physical layer coding techniques
- Services and protocols of the data link layer
- Flow control (sliding window)
- Applications: LAN, MAN, High-Speed LAN, WAN
- Services of the network layer
- Routing algorithms
- Broadcast and Multicast routing
- Congestion Control
- Addressing
- Internet protocol (IP)
- Internetworking
- Mobile networking
- Services and protocols of the transport layer
- TCP, UDP

2 Learning objectives
This lecture teaches about basic functionalities, services, protocols, algorithms and standards of network communication systems. Competencies acquired are basic knowledge about the lower four ISO-OSI layers: physical layer, datalink layer, network layer and transport layer; furthermore, basic knowledge about communication networks is taught. Attendants will learn about the functionality of today’s network technologies and the Internet.

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Examination, Weighting: 100 %)
Usability of the module
Wi-CS, Wi-ETiT, BSc CS, BSc ETiT, BSc iST

Grade bonus compliant to §25 (2)
Grade improvement is achieved by solving voluntary additional assignments due weekly in writing during the lecture period. The maximum grade improvement is 1.0. For a grade improvement to be awarded, a minimum number of points (50% of the maximum achievable points) must be reached. Above this minimum number, the grade improvement increases proportionally (from 0.0 grade improvement at the minimum number to a maximum of 1.0 grade improvement at 95% of the maximum achievable points). Above 95% of the maximum achievable points, the bonus is 1.0. Components of the additional assignments can be classical exercises, answering quizzes, creating wiki articles or quizzes. Participation in these is mandatory to receive the grade improvement. The grade improvement has no influence on passing the exam.

1. **Teaching content**
The TK Seminar is cycle of seminar where students are given the chance to read and analyze current scientific publications.

2. **Learning objectives**
After participation in the seminar Telekooperation, students
- have been introduced to the research area of their seminar topic
- are able to critically read and analyze scientific papers
- can document and present the evaluation of such critical analysis in both written and spoken form

3. **Recommended prerequisites for participation**
General knowledge within Computer Science based on Bachelor.

4. **Form of examination**
Course related exam:

### 1 Teaching content
**Objectives:**
- Comprehensive overview about the fundamental problems and approaches in distributed computing
- In-depth methodological knowledge of classical distributed algorithms and programming paradigms
- Applicable exemplary knowledge of current developments and standards

**Syllabus:**
- Introduction
- Refresher and supplement to Chapter 1 of the Net-Centric Computing canon.
- Overview of the lecture
- Distributed Algorithms
  - Elementary algorithms (e.g., global state).
  - Basic algorithms (e.g., exclusion, consensus, cooperation)
  - Formalization (properties and their proof).
- Distributed Programming
  - Push paradigms (e.g., IPC, RPC, DOC)
  - Current approaches (e.g., pull paradigms, object mobility)

### 2 Learning objectives
After successful completion of the module, students are familiar with the concepts of distributed algorithms and programming. They understand the fundamental issues of distributed systems and the classical distributed algorithms and programming paradigms. They are able to apply these classical and current standards of distributed programming to given problems.

### 3 Recommended prerequisites for participation
Recommended: Computer Networks and Distributed Systems

### 4 Form of examination
Course related exam:
- [20-00-0065-iv] (Technical examination, Oral/written examination, Default RS)

The form of the examination will be announced at the beginning of the course. One or a combination of max. two of the following forms is possible.

Written exam (duration 60 or 90 or 120 minutes), oral exam (duration 15 or 30 minutes), homework (optional: including tests).

### 5 Prerequisite for the award of credit points
Pass exam (100%)

### 6 Grading
Course related exam:
- [20-00-0065-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

### 7 Usability of the module
May be used in other degree programs.

8 Grade bonus compliant to §25 (2)

1 Teaching content
The course deals with cutting-edge development topics in the area of multimedia communication systems. Besides a general overview, it provides a deep insight into a special development topic. The topics are selected according to the specific working areas of the participating researchers and convey technical and basic scientific competencies in one or more of the following topics:

- Network planning and traffic analysis
- Performance evaluation of network applications
- Discrete event simulation for network services
- Protocols for mobile ad hoc networks / sensor networks
- Infrastructure networks for mobile communication / mesh networks
- Context-aware communication and services
- Peer-to-peer systems and architectures
- Content distribution and management systems for multimedia/e-learning
- Multimedia authoring and re-authoring tools
- Web service technologies and service-oriented architectures
- Adaptive educational technologies
- Natural language processing in education

The concrete list of topics can be found each semester on the corresponding teaching website of KOM.

2 Learning objectives
The ability to solve simple problems in the area of multimedia communication shall be acquired. Acquired competences are:

- Design of simple communication applications and protocols
- Implementing and testing of software components for distributed systems
- Application of object-oriented analysis and design techniques
- Presentation of project advances and outcomes

3 Recommended prerequisites for participation
Keen interest to explore basic topics of cutting edge communication and multimedia technologies. Further we expect:

- Basic experience in programming Java/C# (C/C++)
- Knowledge in computer communication networks. Lectures in Communication Networks I and/or Net Centric Systems are recommended.

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)

Report (including submission of programming code) and/or Presentation and/or Oral examination (25 minutes) and/or Colloquium (testate), but never more than two out of it. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
BSc ETiT, BSc/MSc iST, MSc MEC, Wi-CS, Wi-ETiT, BSc/MSc CS

8 Grade bonus compliant to §25 (2)

2 Learning objectives
The ability to solve and evaluate technical problems in the area of design and development of future multimedia communication networks and applications using state of the art scientific methods. Acquired competences are among the following:
- Searching and reading of project relevant literature
- Design of communication applications and protocols
- Implementing and testing of software components
- Application of object-orient analysis and design techniques
- Acquisition of project management techniques for small development teams
- Evaluation and analyzing of technical scientific experiments
- Writing of software documentation and project reports
- Presentation of project advances and outcomes

3 Recommended prerequisites for participation
Keen interest to develop and explore challenging solutions and applications in cutting edge multimedia communication systems. Further we expect:
- Basic experience in programming Java/C# (C/C++).
- Basic knowledge in Object oriented analysis and design.
- Knowledge in computer communication networks. Lectures in Communication Networks I and/or Net Centric Systems are recommended.

1 Teaching content
1) Discrete-Time Signals and Linear Systems - Sampling and Reconstruction of Analog Signals
2) Digital Filter Design - Filter Design Principles; Linear Phase Filters; Finite Impulse Response Filters; Infinite Impulse Response Filters; Implementations
3) Digital Spectral Analysis - Random Signals; Nonparametric Methods for Spectrum Estimation; Parametric Spectrum Estimation; Applications;
4) Kalman Filter

2 Learning objectives
Students understand basic principles of signal processing. They can design and analyze FIR and IIR filters. Furthermore, they are able to analyze statistical signals in the time and frequency domain. The students know the basics of spectral estimation and can design non-parametric as well as parametric spectral estimators and analyze them with respect to their performance.

3 Recommended prerequisites for participation
Deterministic signals and systems theory

## 1 Teaching content
The lecture covers aspects of mobile communication systems with particular focus on the physical layer.
- Mobile radio systems, services, market, standardization
- Duplex and multiple access techniques, cellular concept
- Mobile radio channel, deterministic and stochastic description
- Modulation schemes
- Code division multiple access (CDMA)
- Orthogonal frequency division multiplexing (OFDM)
- Optimum and suboptimum receiver techniques
- Cellular radio capacity and spectrum efficiency
- Diversity methods
- Multiple input multiple output (MIMO) systems
- Power control and handover
- Architecture of mobile radio systems

## 2 Learning objectives
After completion of the module, students possess
- a profound understanding of physical layer aspects, e.g., transmission schemes, multiple access schemes of mobile communication systems, duplex schemes, multi carrier schemes, receiver techniques, multi antenna schemes
- a profound understanding of signal propagation in mobile radio systems (mobile radio channel)
- the ability to understand and solve problems of the field of the physical layer
- the ability to compare, analyse and evaluate different system concepts
- knowledge on modelling of the transmission properties of the mobile radio channel

## 3 Recommended prerequisites for participation
Deterministic Signals and Systems, Communication Technology I, Mathematics I to III, Statistics/Probability Theory, Scientific Computing

## 4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

## 5 Prerequisite for the award of credit points
Passing the final module examination

## 6 Grading
Module exam:
- Module exam (Technical examination, Examination, Weighting: 100 %)

1 **Teaching content**
This graduate course introduces the basic theory of convex optimization and illustrates its use with many recent applications in communication systems and signal processing.

2 **Learning objectives**
After completing the module, students will have become familiar with advanced topics in modern communication. This includes in particular the basic theory of convex optimization and its application in digital signal processing and mobile communication systems.

3 **Recommended prerequisites for participation**
Knowledge in linear algebra and the basic concepts of signal processing and communications.

4 **Form of examination**
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS)
The examination takes place in form of a written exam (duration: 120 minutes). If one can estimate that less than 14 students register, the examination will be an oral examination (duration: 20 min.). The type of examination will be announced in the beginning of the lecture.

5 **Prerequisite for the award of credit points**
Passing the final module examination

6 **Grading**
Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**
MSc ETiT

8 **Grade bonus compliant to §25 (2)**

1 Teaching content
This lecture course introduces the principles of space-time and multiple-input multiple-output (MIMO) communications.
Outline: Motivation and background; overview of space-time and MIMO communications; fading MIMO channel models, MIMO information theory, receive and transmit diversity; channel estimation, MIMO detectors, Alamouti space-time block code, orthogonal space-time block codes; linear dispersion codes; coherent and non-coherent decoders, differential space-time block coding; MIMO with limited feedback, Multiantenna- and multiuser diversity, BER performance analysis, MIMO in modern wireless communication networks, multicell and multiuser MIMO (coordinated multipoint).

2 Learning objectives
Students will understand modern MIMO communications and existing space-time coding techniques.

3 Recommended prerequisites for participation
Knowledge of basic communication theory and basic information theory.

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS)
The examination takes place in form of a written exam (duration: 120 minutes). If one can estimate that less than 10 students register, the examination will be an oral examination (duration: 20 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
MSc ETiT

8 Grade bonus compliant to §25 (2)

1 Teaching content
Rapid urbanization presents cities with complex challenges, from socio-economic and environmental problems to issues involving infrastructure and governance. In the seminar students will have a look at different technical approaches to cope with these different challenges, e.g. for traffic prediction, analysis of environmental data or disaster preparation and management.

2 Learning objectives
The students learn fundamentals of scientific work when interacting with existing Smart City literature. Furthermore, the students get a good overview of the topic smart city.

3 Recommended prerequisites for participation

4 Form of examination
Course related exam:
- [20-00-0619-se] (Study achievement, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:

Module owner
Prof. Dr. rer. nat. Eberhard Mühlhäuser

1 Teaching content
As part of the internship, students become acquainted with IoT and radio protocols and independently carry out a project with embedded hardware. In addition, aspects of IT security are also taken into account. The main focus is on Bluetooth LE, Bluetooth Mesh, LoRaWAN and communication via OOB channels. Depending on the selected project topic, hardware (microcontrollers, FPGAs, RF transceivers, software defined radio, etc.) as well as laboratory environment (logic analyzers, RF analyzers, oscilloscopes, etc.) are provided.

2 Learning objectives
At the end of the course, students will be able to deal with complex specifications of radio protocols and transfer them into practice. Furthermore, the practical handling of embedded systems and laboratory equipment is taught.

3 Recommended prerequisites for participation
Previous knowledge in computer networks (compulsory lecture "Computer Networks and Distributed Systems) and Embedded Systems (compulsory lectures Computer Organization and / or Data Engineering) Knowledge of the programming language C and basic knowledge of electrical engineering are helpful, as well as knowledge from relevant lectures in the field" Networks and Systems " Distributed systems "such as TK3, mobile networks or KN1.

4 Form of examination
Course related exam:
• [20-00-1064-pr] (Study achievement, Oral/written examination, Default RS)
Pass exam (100%)

1 **Teaching content**
The Modul covers in-depth knowledge about the network layer and related aspects of the link layer. For different types of networks and different requirements we consider methods for routing, for the representation of routing and switching data and for packet forwarding. The focus is on questions of protocol design with respect to robustness, stability and efficiency, also in terms of the interplay with other layers. Security aspects of the network layer are also considered, for instance firewall technologies or BGP security. The accompanying exercises in part consist of group exercise lab blocks.

2 **Learning objectives**
After taking this module, students understand the design options for routing in networks and the efficient implementation of packet forwarding in detail. They can use this knowledge to assess the effects of protocol design decisions and to analyze the expected and actual behavior of protocol designs, individually and in comparison.

3 **Recommended prerequisites for participation**
Basic knowledge in the field of communication networks, as covered for instance in the module „Communication Networks I“.

4 **Form of examination**
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS)
The examination is an oral examination (duration: 30 min.). If it is foreseeable that more than 30 students will enroll, the examination can also take the form of a written exam (duration: 120 min.). The type of examination will be announced at the beginning of the course.

5 **Prerequisite for the award of credit points**
Passing the final module examination

6 **Grading**
Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**
MSc etit, MSc (WI-)etit, BSc/MSc iST

8 **Grade bonus compliant to §25 (2)**
Announcements will be made at the beginning of the semester as to whether there will be homework assignments to accompany the lecture that will improve grades.

9 **References**
Technical literature will be mentioned in the course.

1 Teaching content
Linear and nonlinear digital modulation schemes, optimum receivers for AWGN channels, error probability, channel capacity, channel models, channel estimation and data detection for multipath channels, multicarrier schemes, OFDM

2 Learning objectives
After completion of the lecture, students possess:
- the ability of comparing, evaluating, classifying an analyzing linear and nonlinear modulation schemes by means of signal space representations;
- the ability to understand, describe and analyze the influence of AWGN on the signal;
- the ability to understand and derive optimum receivers in case of AWGN channels;
- the ability to understand, describe and analyze the influence of multipath propagation on the signal;
- the ability to describe the influence of a multipath channel mathematically (channel model) and estimate the multipath channel at the receiver;
- the knowledge of equalizing the received signal in order to undo the influence of multipath propagation, as well as the ability to derive and design several equalizer structures;
- the ability to analyze and evaluate the properties and application areas of multicarrier transmission systems, e.g. OFDM-systems;
- the ability to design and evaluate the system parameters of multicarrier schemes for the application in realistic wireless communication scenarios;
- the ability to mathematically express and analyze all above system models in matrix-vector-notation.

3 Recommended prerequisites for participation
Deterministische Signale und Systeme, Communication Technology I, Basics of Telecommunication, Mathematics I to III, Statistics/Probability Theory, Scientific Computing

4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

Prof. Dr.-Ing. Marius Pesavento

1 Teaching content
This lecture course is devoted to topics in network information theory. Outline: overview of Shannon capacity, outage and ergodic capacity, capacity of channels with state, capacity of Gaussian vector channels, capacity regions of multi-user channels, capacity regions of multiple-access and broadcast fading channels, interference channel, relay channel, multiuser bounds, graphical multi-hop networks, routing, network coding, capacity of MIMO multiple-access and broadcast channels, duality of MIMO multiple access and broadcast channels, dirty paper coding, multi-user diversity, wiretap channel, secrecy rate and physical layer security.

2 Learning objectives
Upon completion of the module, students will have an understanding of the advanced concepts and strategies in network information theory.

3 Recommended prerequisites for participation
Knowledge of basic communication theory

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS)
The examination takes place in form of a written exam (duration: 120 minutes). If apparent that less than 10 students register, the examination will be an oral examination (duration: 20 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

1 Teaching content
Algorithms of speech and audio signal processing: Introduction to the models of speech and audio signals and basic methods of audio signal processing. Procedures of codebook based processing and audio coding. Beamforming for spatial filtering and noise reduction for spectral filtering. Cepstral filtering and fundamental frequency estimation. Mel-filtered cepstral coefficients (MFCCs) as basis for speaker detection and speech recognition. Classification methods based on GMM (Gaussian mixture models) and speech recognition with HMM (Hidden markov models). Introduction to the methods of music signal processing, e.g. Shazam-App or beat detection.

2 Learning objectives
Based on the module you acquire an advanced knowledge of digital audio signal processing mainly with the help of the analysis of speech signals. You learn about different basic and advanced methods of audio signal processing, to range from the theory to practical applications. You will acquire knowledge about algorithms such as they are applied in mobile telephones, hearing aids, hands-free telephones, and man-machine-interfaces (MMI). The exercise will be organized as a talk given by each student with one self-selected topic of speech and audio processing. This will allow you to acquire the know-how to read and understand scientific literature, familiarize with an unknown topic and present your knowledge, such as it will be certainly required from you in your professional life as an engineer.

3 Recommended prerequisites for participation
Knowledge about satistical signal processing (lecture „Digital Signal Processing“). Desired - but not mandatory - is knowledge about adaptive filters.

4 Form of examination
Module exam:
• Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)
Seminar presentation: Scientific talk about a topic in the field of “Speech and Audio Signal Processing”, single (duration 10-15 min) or in groups of two students (15-20 min) or in a group of 20 students and more a written exam (duration 90 min)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
• Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
MSc ETiT, MSc iCE

8 Grade bonus compliant to §25 (2)

1 Teaching content

1. Introduction to MATLAB
2. Discrete-Time Signals and Systems
3. Frequency-Domain Analysis using the DFT
4. Digital FIR Filter Design
5. IIR Filter Design using Analog Prototypes
6. Nonparametric Spectrum Estimation

2 Learning objectives
The students are able to apply skills acquired in the course Digital Signal Processing. These include the design of digital FIR and IIR filters as well as non-parametric and parametric spectrum estimation. Students learn how MATLAB is used to apply theoretical concepts and to demonstrate signal processing techniques by using hands-on application examples.

3 Recommended prerequisites for participation
Fundamentals of Signal Processing

4 Form of examination
Module exam:
- Module exam (Study achievement, Written examination, Duration: 120 Min., Default RS)
Exam (Duration: 120 min) and a Report (Lab Reports), Details will be announced at the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

Module owner
Prof. Dr.-Ing. Ralf Steinmetz

1 Teaching content
The course deals with cutting-edge development topics in the area of multimedia communication systems. Besides a general overview, it provides a deep insight into a special development topic. The topics are selected according to the specific working areas of the participating researchers and convey technical and basic scientific competencies in one or more of the following topics:
- Network planning and traffic analysis
- Performance evaluation of network applications
- Discrete event simulation for network services
- Protocols for mobile ad hoc networks / sensor networks
- Infrastructure networks for mobile communication / mesh networks
- Context-aware communication and services
- Peer-to-peer systems and architectures
- Content distribution and management systems for multimedia/e-learning
- Multimedia authoring and re-authoring tools
- Web service technologies and service-oriented architectures
- Adaptive educational technologies
- Natural language processing in education

The concrete list of topics can be found each semester on the corresponding teaching website of KOM.

2 Learning objectives
The ability to solve and evaluate problems in the area of design and development of future multimedia communication networks and applications shall be acquired. Acquired competences are:
- Design of complex communication applications and protocols
- Implementing and testing of software components for distributed systems
- Application of object-oriented analysis and design techniques
- Acquisition of project management techniques for small development teams
- Writing of software documentation and project reports
- Presentation of project advances and outcomes

3 Recommended prerequisites for participation
Keen interest to explore challenging topics which are cutting edge in technology and research. Further we expect:
- Solid experience in programming Java and/or C# (C/C++)
- Solid knowledge in object oriented analysis and design
- Solid knowledge in computer communication networks are recommended
- Lectures in Communication Networks I (II, III, or IV) are an additional plus

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report (including submission of programming code) and/or Presentation and/or Oral examination (25 minutes) and/or Colloquium (testate), but never more than two out of it. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination
6 Grading
Module exam:
• Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
MSc ETiT, MSc iCE, BSc/MSc iST, Wi-ETiT, BSc/MSc CS, Wi-CS,

8 Grade bonus compliant to §25 (2)

9 References
Each topic is covered by a selection of papers and articles. In addition we recommend reading of selected chapters from following books:
• Andrew Tanenbaum: "Computer Networks". Prentice Hall PTR (ISBN 0130384887)
• Erich Gamma, Richard Helm, Ralph E. Johnson: "Design Patterns: Objects of Reusable Object Oriented Software" (ISBN 0-201-63361-2)

1 Teaching content
The course deals with cutting edge scientific and development topics in the area of multimedia communication systems. Besides a general overview it provides a deep insight into a special scientific topic. The topics are selected according to the specific working areas of the participating researchers and convey technical and scientific competences in one or more of the following topics:

- Network planning and traffic analysis
- Performance evaluation of network applications
- Discrete event simulation for network services
- Protocols for mobile ad hoc networks / sensor networks
- Infrastructure networks for mobile communication / mesh networks
- Context-aware communication and services
- Peer-to-peer systems and architectures
- Content distribution and management systems for multimedia / e-learning
- Multimedia authoring and re-authoring tools
- Web service technologies and service-oriented architectures
- Applications for distributed workflows

2 Learning objectives
The ability to solve and evaluate technical and scientific problems in the area of design and development of future multimedia communication networks and applications using state of the art scientific methods shall be acquired. Acquired competences are:

- Searching and reading of project relevant literature
- Design of complex communication applications and protocols
- Implementing and testing of software components for distributed systems
- Application of object oriented analysis and design techniques
- Acquisition of project management techniques for small development teams
- Systematic evaluation and analyzing of technical and scientific experiments
- Writing of software documentation and project reports
- Presentation of project advances and outcomes

3 Recommended prerequisites for participation
Keen interest to develop and explore challenging solutions and applications in cutting edge multimedia communications systems using scientific methods. Further we expect:

- Solid experience in programming Java and/or C (C/C++)
- Solid knowledge in object oriented analysis and design
- Basic knowledge of design patterns, refactoring and project management
- Solid knowledge in computer communication networks are recommended
- Lectures in Communication Networks I (II, III, or IV) are an additional plus

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
  Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
• Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
Wi-CS, Wi-ETiT, BSc/MSc CS, MSc ETiT, MSc iST

8 Grade bonus compliant to §25 (2)

9 References
Each topic is covered by a selection of papers and articles. In addition we recommend reading of selected chapters from following books:
• Andrew Tanenbaum: "Computer Networks". Prentice Hall PTR (ISBN 0130384887)
• Erich Gamma, Richard Helm, Ralph E. Johnson: "Design Patterns: Objects of Reusable Object Oriented Software" (ISBN 0-201-63361-2)

1 **Teaching content**
Solving special problems concerning wireless communications (problems concerning signal transmission and processing as well as problems concerning the network are possible, topics will be defined out of the current research topics of the lab);
working on the project in teams (2-3 students);
organizing and structuring of a project;
dealing with scientific publications, reading up the theoretical background of the task;
practical work on a complex task;
scientific presentation of the results (report/presentation);
defending the work in an oral discussion including an audience.

2 **Learning objectives**
After completion of the course, students possess
- the ability to classify and analyze special problems concerning wireless communications,
- the knowledge to plan and organize projects with temporal limitation,
- the capability to set up and test methodologies for analysis and simulation environments,
- skills to evaluate and present achieved results and achieved conclusions.

3 **Recommended prerequisites for participation**
Previous knowledge in digital communications, signal processing, wireless communication.

4 **Form of examination**
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

5 **Prerequisite for the award of credit points**
Passing the final module examination

6 **Grading**
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**
MSc ETiT, MSc Wi-ETiT, MSc CE, MSc iCE, MSc iST, MSc MEC

8 **Grade bonus compliant to §25 (2)**

9 **References**
Literature will be announced during the course.

1 Teaching content
This seminar deals with current and upcoming trends relevant to the future development of multimedia communication systems. The educational objective of this seminar is to gain knowledge about future research trends in different areas. To this aim, an extensive literature research will be performed, as well as the writing-up of a report and the presentation of selected, high-quality research topics from current leading magazines, newspapers and conferences in the web technologies research area.

Some potential topics are:
- Knowledge & Educational Technologies
- Self organizing Systems & Overlay Communication
- Mobile Systems & Sensor Networking
- Service-oriented Computing
- Multimedia Technologies & Serious Games

2 Learning objectives
Students shall acquire profound knowledge from current scientific publications, standards and literature on multimedia communication systems and applications which will build the future Internet. In so doing, the students will develop the following competencies:
- Search for and review relevant scientific literature.
- Analyse and evaluate complex technical and scientific information.
- Write technical and scientific abstracts and summary reports.
- Present technical and scientific information.

3 Recommended prerequisites for participation
Solid knowledge in computer communication networks. Lectures in Communication Networks I and II are recommended.

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation and/or Colloquium. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
CS, Wi-CS, ETiT, Wi-ETiT, MSc CS, MSc ETiT, MSc iST

8 Grade bonus compliant to §25 (2)

9 References
Depending on specific topic (selected articles of journals, magazines, and conferences).

Module owner
Prof. Dr.-Ing. Abdelhak Zoubir

1 Teaching content

Theory:
1. Derivation of optimal filters for stochastic processes, e.g. Wiener filter or linear prediction filter based on suitable cost functions.
2. Elaboration of adaptive procedures, which allow to iteratively approach the optimal solution for non-stationary signals in non-stationary environments. Here, the adaptive procedures such as NLMS adaptation, affine projection, and the RLS algorithm are derived and extensively analysed.
3. Analysis of the adaptation behaviour and control procedures of adaptive filters based on the NLMS procedure.
4. Derivation and analysis of the Kalman filter as optimal filter for non-stationary input signals.
5. Procedures for the decomposition of signals into sub-bands for the realization of optimal filters in the frequency domain, e.g. noise reduction procedures.

Applications:
Parallel to the theory, practical applications are explained. As an example for the Weiner filter, the acoustic noise reduction procedures are explained. Acoustic echo cancellation and feedback cancellation are given as examples for adaptive filters. Furthermore beamforming approaches are introduced.

It is planned to offer an excursion to Siemens Audiology Engineering Group in Erlangen.
In the 4 to 5 exercises, some content of the lecture will be implemented in MATLAB which allows the students to get familiar with practical realizations of the theoretical procedures.

2 Learning objectives

Upon completion of the module, students were taught the fundamentals of adaptive filters. The necessary algorithms are derived, interpreted and applied to examples of speech, audio and video processing. Based on the content of the lecture you are able to apply adaptive filters to real practical applications.

For the admission to the exam you give a talk about a topic in the domain of adaptive filters chosen by you. This will allow you to acquire the know-how to read and understand scientific literature, familiarize yourself with an unknown topic and present your knowledge, such as it will be certainly required from you in your professional life as an engineer.

3 Recommended prerequisites for participation
Digital Signal Processing

4 Form of examination

Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)

The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 21 students register, the examination will be an oral examination (duration: 20 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading

Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
8 Grade bonus compliant to §25 (2)

1 Teaching content
The course covers the fundamentals of detection and estimation theory. These are extended by advanced topics in statistical signal processing. Applications are typically from the following areas: Detection in Radar Applications; Robust Estimation; Prediction, Filtering, and Tracking with the Kalman Filter; Sensor Array Signal Processing, Direction of Arrival Estimation, and Source Detection; Time-Frequency Analysis. Topics may change from semester to semester.

The course includes a series of lectures followed by a supervised research seminar over approximately 2 months. The main topics covered are:
- Estimation theory
- Detection theory
- Robust estimation theory
- Seminar projects: e.g., microphone arrays/beamforming, localization and tracking, radar/ultrasound imaging, acoustic source localization, estimation of number of sources

2 Learning objectives
After completing the module, students will be able to work independently on advanced topics in signal processing and reproduce existing results. The students can present these results and discuss them scientifically.

3 Recommended prerequisites for participation
DSP, general interest in signal processing

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation and/or Colloquium. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
MSc ETiT, BSc/MSc iST, MSc iCE, Wi-ETiT

1 Teaching content
Overview of most important antenna parameters types as well as their applications. Fundamental theories: Fourier transform for far-field pattern calculations, antenna modeling techniques, antenna synthesis methods, image theory, determination of field regions of line sources, of the average radiated power density and power, directivity and gain. Antennas as key elements in power budgets of radio links, introducing the effective aperture of an antenna, deriving the relation between gain and effective aperture. Array antennas are a key hardware for beamforming and smart antenna systems: fundamentals of phased-scanning arrays, non-uniformly excited, equally spaced linear arrays, multi-dimensional planar arrays and mutual coupling effects. Wire antennas: still the most prevalent of all antenna forms, relatively simple in concept, easy to construct, very inexpensive. Antenna radiation fields and antenna parameters for different types of antennas are derived from Maxwell’s equations, applied for aperture antennas (horns, lenses or reflector antennas) and printed antennas (microstrip-patch and coplanar-slot antennas) Some basic numerical calculation methods: integral equation methods in the time and frequency domain, physical optics and uniform theory of diffraction are briefly summarized and compared for antennas and scattering problems. Smart antennas in communication and radar systems, with focus on beam steering and adaptive beamforming.

2 Learning objectives
Students will know basic antenna parameters: pattern, gain, directivity, half-power beamwidth, side-lobe-level, efficiency and input impedance to compare, assess and evaluate different antennas for various applications and operating frequencies. The antenna field regions, reactive near-field, near-field and far-field, can be differentiated and the far-field pattern of an antenna can be determined from given current distributions along the antenna by using Fourier transformation or integral solutions with distributed ideal dipoles as basic elements (antenna analysis). To assess in general physical requirements, constrains and limitations of antennas, students can use fundamental antenna theory: impedance matching techniques, antenna modeling and far-field pattern analysis, antenna synthesis, image theory and fundamental limits of electrically small antennas. After being incorporated into the different adaptive beamforming techniques, the array theory enables the student to design antenna systems that are assembled of a certain number of separate elements, feeding network, beamforming network etc. for phased-scanning or smart antennas in communications and sensing. Moreover, students are able to determine, analyze and evaluate the most important classes of antennas in wireless technology for many applications, operating frequencies, desired requirements or practical constrains: (1.) wire-dipole antennas, (2.) planar antennas (microstrip, dipole and slot antennas), (3.) aperture antennas (horn antennas, parabolic reflector antennas, lens antennas, Cassegrain and Gregorian double-reflector configurations), (4.) broadband and frequency-independent antennas (V antennas, biconical antennas, helical antennas, spiral and log-periodic antennas).

3 Recommended prerequisites for participation
Fundamentals of Communications, Microwave Engineering 1

4 Form of examination

1 Teaching content
Part 1 Passive microwave components:
• Calculation of the two-port parameters of simple passive components and circuits (transmission lines and lumped elements) for MMICs
• Wave parameters and S-parameters
• Smith chart and matching circuits with line elements or lumped elements
• Design and equivalent circuits of passive microwave components (transmission lines, capacitors, inductors and resistors)

Part 2 Active microwave components:
• Design and equivalent circuits of field effect transistors (FET) and heterostructure transistors (HEMTs)
• Gain and cut-off frequencies
• Schottky contacts: function and characteristics

Part 3 Active microwave circuits (main part):
• FET amplifiers: operation, equivalent circuit, gain, matching circuit, stability and circuit implementation
• Oscillator design
• Mixer design
• Material choice (compound semiconductor material systems: properties, fabrication and requirements)

Applications of these circuits range from communication systems such as cell phones to satellite transceivers as well as high-frequency sources up to Terahertz.
Topics of good scientific practice, as well as societal or ethical aspects of product design, optimization, and algorithms are addressed in an accompanying manner, where technically appropriate.

2 Learning objectives
After successful completion of the module students understand the physics of microwave waveguides, resonators, microwave components (passive and active) as well as microwave circuits.

3 Recommended prerequisites for participation
Introduction to Electrodynamics, Microwave Engineering I

4 Form of examination
Module exam:
• Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading

## 1 Teaching content

The course deals with cutting edge scientific and development topics in the area of multimedia communication systems. Besides a general overview it provides a deep insight into a special scientific topic. The topics are selected according to the specific working areas of the participating researchers and convey technical and scientific competences in one or more of the following topics:

- Network planning and traffic analysis
- Performance evaluation of network applications
- Discrete event simulation for network services
- Protocols for mobile ad hoc networks / sensor networks
- Infrastructure networks for mobile communication / mesh networks
- Context-aware communication and services
- Peer-to-peer systems and architectures
- Content distribution and management systems for multimedia / e-learning
- Multimedia authoring and re-authoring tools
- Web service technologies and service-oriented architectures
- Resource-based Learning

## 2 Learning objectives

The ability to solve and evaluate technical and scientific problems in the area of design and development of future multimedia communication networks and applications using state of the art scientific methods shall be acquired. Acquired competences are:

- Searching and reading of project relevant literature
- Design of complex communication applications and protocols
- Implementing and testing of software components for distributed systems
- Application of object-oriented analysis and design techniques
- Acquisition of project management techniques for small development teams
- Systematic evaluation and analyzing of technical and scientific experiments
- Writing of software documentation and project reports
- Presentation of project advances and outcomes

## 3 Recommended prerequisites for participation

Keen interest to develop and explore challenging solutions and applications in cutting edge multimedia communications systems using scientific methods. Further we expect:

- Solid experience in programming Java and/or C# (C/C++).
- Solid knowledge in object oriented analysis and design.
- Basic knowledge of design patterns, refactoring and project management.
- Solid knowledge in computer communication networks is recommended.
- Lectures in “Communication Networks I” and “Communication Networks II” are recommended

## 4 Form of examination

Module exam:

- Module exam (Study achievement, Oral/written examination, Default RS)
- Report (including submission of programming code) and/or Presentation and/or Oral examination and/or Colloquium (testate), but never more than two out of it. The type of examination will be announced in the beginning of the lecture.
5 **Prerequisite for the award of credit points**

Passing the final module examination

6 **Grading**

Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**

MSc Wi-ETiT, BSc/MSc CS, MSc Wi-CS, MSc ETiT, MSc iST

8 **Grade bonus compliant to §25 (2)**

1 Teaching content
Investigating and solving specific problems concerning communication and sensor systems (Problems concerning communications engineering, microwave technology, signal processing, sensor networks etc. are possible, topics will be defined out of the recent research topics of the involved labs), working on a a given task by one's own, organizing and structuring of a seminar task, searching and analyzing of scientific reference publications for a given task, summarizing achieved results and conclusions by means of a written report, presenting achieved results and conclusions and defending them in an oral discussion including audience.

2 Learning objectives
Upon successful completion of the module, students will be able to:
- the ability to apply methods of communication and sensor systems to practical problems
- deep and special knowledge in a particular field of communication and sensor systems (communications engineering), RF technology, signal processing, sensor networks
- the skills to find, analyze and evaluate scientific reference papers for a particular topic
- the capability to summarize the achieved scientific findings in the form of a concise report
- the ability to present and discuss achieved results in the form of a presentation in front of an audience

3 Recommended prerequisites for participation
Previous knowledge in chosen discipline, e.g. communication technology, signal processing, microwave technology, sensor networks

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

Upon successful completion of the module, students will be able to:
• the ability to apply methods of communication and sensor systems to practical problems
• deep and special knowledge in a particular field of communication and sensor systems (communications engineering), RF technology, signal processing, sensor networks
• the skills to find, analyze and evaluate scientific reference papers for a particular topic
• the capability to summarize the achieved scientific findings in the form of a concise report
• the ability to present and discuss achieved results in the form of a presentation in front of an audience

3 Recommended prerequisites for participation
Previous knowledge in chosen discipline, e.g. communication technology, signal processing, microwave technology, sensor networks

4 Form of examination
Module exam:
• Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
• Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
BSc ETiT, BSc Wi-ETiT, BSc CE, BSc iST, BSc MEC

8 Grade bonus compliant to §25 (2)

9 References
Will be announced in the lecture

1 Teaching content
Investigating and solving specific problems concerning communication and sensor systems. Topics will be defined out of the recent research topics of the research group. Working on a given task by one’s own, organizing and structuring of a seminar task, searching and analyzing of scientific reference publications for a given task, summarizing achieved results and conclusions by means of a written report, presenting achieved results and conclusions and defending them in an oral discussion including audience.

2 Learning objectives
Upon successful completion of the module, students will be able to:

• the ability to apply methods of communication and sensor systems to practical problems
• deep and special knowledge in a particular field of communication and sensor systems
• the skills to find, analyze and evaluate scientific reference papers for a particular topic

1 Teaching content
This project-seminar addresses new trends in sensor array and multichannel processing with multidimensional tensor data representations. The specific thematic focus of the seminar will be adapted from year to year according to the latest trends in the research field. The topics will be announced on the course website well in advance.

2 Learning objectives
Students will understand theory, algorithms and applications of sensor array and multichannel system.

3 Recommended prerequisites for participation
Basic knowledge in linear algebra.

1 Teaching content

The Praktikum is divided into three parts. In each of the parts, there will be one lecture for reviewing the basic concepts in that part and for introducing new material. After the lecture, the students will have roughly 4 weeks to implement the assignment given in the lecture. Each of the assignments will be graded separately and all of the grades will be used to determine the total grade for the Praktikum.

Relevant topics are:
- Introduction to Java network programming and HTTP
- Peer-to-peer technologies
- Web caching
- Internet standards

2 Learning objectives

Students will have acquired knowledge on currently evolving technologies. Thus, students will have used these building blocks of future-generation Internet services practically and will have gathered experiences with using, developing and integrating those technologies.

3 Recommended prerequisites for participation

Net Centric Systems

4 Form of examination

Course related exam:
- [20-00-0131-pr] (Study achievement, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points

Pass exam (100%)

1 Teaching content
Mobile communications and wireless networking technology has seen a thriving development in recent years. The integrated course addresses the characteristics/principles of mobile networks in detail, and practical solutions are presented. Hereby our focus is on the network layer, which is often regarded as the glue of communication systems. In addition to describing the state of the art in technology we discuss actual research problems and learn about methodologies to approach such problems systematically. The contents of the course will be deepened by exercises.

Course contents:
- Introduction to mobile and wireless communications: Applications, history, market vision
- Overview of wireless transmission: frequencies & regulations, signals, antennas, signal propagation, multiplexing, modulation, spread spectrum, cellular systems
- Medium access control in the wireless domain: SDMA, FDMA, CDMA TDMA (fixed, Aloha, CSMA, DAMA, PRMA, MACA, collision avoidance, polling)
- Wireless local area networks: IEEE 802.11 standard including physical layer, MAC layer and access schemes, quality of service and power management
- Wireless metropolitan area networks: Wireless mesh networks, IEEE 802.16 standard including modes of operation, medium access control, quality of service and scheduling
- Mobility at network layer: Concepts to support mobility on various layers, Mobile IP
- Ad hoc networks: Terminology, basics and applications, characteristics of ad hoc communication, ad hoc routing paradigms and protocols
- Performance evaluation of mobile networks: Overview of performance evaluation, systematic approach / common mistakes and how to avoid them, experimental design and analysis
- Mobility at transport layer: Variants of TCP (indirect TCP, snoop TCP, mobile TCP, wireless TCP)
- Mobility at application layer. Outlook: Applications for mobile networks and wireless sensor networks

2 Learning objectives
After successfully attending the course, students have an in-deep knowledge on the working of mobile communication networks. They have gained insight into media access control mechanisms dedicated to wireless communication and have a thorough understanding of mechanisms based on the network and the transport layers, with a focus on ad hoc and mesh networks. Moreover, the students have acquired knowledge about the connections between the different protocol layers and are able to apply the acquired knowledge on methodological analysis of real communication systems. The students are therefore be conversant with the characteristics and basic principles of wireless and mobile communications in theory and practice. The exercise-parts of the integrated course deepen the theoretical foundations by means of exercises, which consist of literature, calculation as well as practical implementation/application examples.

3 Recommended prerequisites for participation
Basic courses in Communication Networks are recommended.

4 Form of examination
Course related exam:
- [20-00-0748-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:

1 Teaching content
Research-related project.

The students will learn to conduct their own research given an individual research project. The topics will be defined together with the adviser.

Possible research topics:
* Multimodal Interaction
* Multitouch
* Proactive Support System
* Sensor Fusion

2 Learning objectives
After successfully attending the course, students are familiar with the process of conducting research from first idea to written paper. They understand how to break down complex research questions into sub-problems and solve these problems. They are able to evaluate their system and write a report based on their findings.

3 Recommended prerequisites for participation

4 Form of examination
Course related exam:
  • [20-00-0485-pr] (Study achievement, Oral/written examination, Default RS)

1 **Teaching content**
Introduction into management of Internet service provider (ISP-)networks for integrating IP service platforms with their quality and traffic profiles.

2 **Learning objectives**
Course Content:
- Requirements and measures to ensure Quality-of-Service (QoS)
  - criteria from the application & user perspective (QoE: Quality of Experience).
  - QoS Architecture in IP Networks: Differentiated & Integrated Services
  - QoS support & impact per application in IP traffic mix (video streaming, VoIP, web browsing, downloads, social networking etc.)
- Quality Assurance for Internet Services in ISP Network Infrastructures
  - Network and Transport Layer Impact: Routing (OSPF, BGP), Multiprotocol Label Switching (MPLS), TCP with protection against errors and failures.
  - measurement, monitoring, optimization of IP traffic regarding QoS
- Quality assurance in service overlays and at application level
  - Content Delivery Networks (CDN), Clouds and Peer-to-Peer Networks (P2P) incl. distributed caches, transport path optimization, scalability
  - IETF Standardization (CDN Interconnection, ALTO: Appl. Layer Traffic Opt.)

3 **Recommended prerequisites for participation**
Recommended:
Prerequisites: Basic knowledge in computer science and Internet applications is required. The courses on Kommunikationsnetze I and II are recommended.

4 **Form of examination**
Course related exam:
- [20-00-0056-vl] (Technical examination, Oral/written examination, Default RS)
The form of the examination will be announced at the beginning of the course. One or a combination of max. two of the following forms is possible.
- Written exam (duration 60 or 90 or 120 minutes), oral exam (duration 15 or 30 minutes), homework (optional: including tests).

5 **Prerequisite for the award of credit points**
Pass exam (100%)

6 **Grading**
Course related exam:
- [20-00-0056-vl] (Technical examination, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**
B.Sc. Informatik
M.Sc. Informatik
Maybe used in other degree programs.

Module owner
Prof. Dr.-Ing. Ralf Steinmetz

1 Teaching content
The seminar investigates current and upcoming topics in multimedia communication systems, which are expected to be of utmost importance for the future evolution of the Internet and information technology in goal. The goal is to learn more about multimedia communication systems by studying, summarizing, and presenting top quality papers from recent high quality networking research journals, magazines, or conferences. The selection of topics corresponds to the research area of participating researchers.
Possible topics are:
• Knowledge & Educational Technologies
• Self organizing Systems & Overlay Communication
• Mobile Systems & Sensor Networking
• Service-oriented Computing
• Multimedia Technologies & Serious Games

2 Learning objectives
The students are actively studying cutting edge scientific articles, standards, and books about multimedia communication systems and applications, which are expected to be of utmost important for the future of the Internet.
Students acquire competences in the following areas:
• Searching and reviewing of relevant scientific literature
• Analysis and evaluation of complex technical and scientific information
• Writing of technical and scientific summaries and short papers
• Presentation of complex technical and scientific information

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
• Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation and/or Colloquium. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
• Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
CS, WiCS, ETiT, Wi-ETiT, BSc/MSc iST

8 Grade bonus compliant to §25 (2)

Prof. Dr.-Ing. Ralf Steinmetz

1 Teaching content
The course deals with topics in the area of software defined networking:
- SDN Data Plane
- SDN Control Plane
- SDN Application Plane
- Network Function Virtualization
- Network Virtualization and Slicing
- QoS and QoE in Software Defined Networks

2 Learning objectives
Upon completion of the module, students will have gained in-depth insights into Software Defined Networking, as well as basic technologies and applications.

3 Recommended prerequisites for participation
Basic courses of the first 4 semesters are required. Knowledge of lectures Communication Networks I and II are recommended.

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)

The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 15 students register, the examination will be an oral examination (duration: 20 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
MSc ETiT, BSc/MSc iST, MSc Wi-ETiT, CS, Wi-CS

1 Teaching content
- Learning how state-of-the-art ubiquitous computing technologies can be utilized in enterprise business processes and in the context of smart city services
- Identifying technologies' economic potential for business processes and in the context of smart cities
- Understanding underlying technologies, their benefits, challenges, and corresponding business cases
- Technologies considered will be RFID technology and its integration with business processes, other smart items (e.g., smart shelves), etc.
- Demonstration of how integration works between the real world and the virtual world as it is represented in enterprise software systems today
- Hands-on experience and live demonstrations

2 Learning objectives
After participation in this course, students will have acquired knowledge about implications of ubiquitous computing on business to business processes and in the context of smart city services in conjunction with basic concepts.

3 Recommended prerequisites for participation

4 Form of examination
Course related exam:
- [20-00-0121-vl] (Technical examination, Oral/written examination, Default RS)

Teaching content
First, there will be an introduction of different radar techniques, describing their concepts and principles, their applications and the operating frequency ranges. In a historical survey, the radar ranges and propagation effects will be dealt with. In the second part, various primary and secondary radar techniques will be investigated in detail, including specific techniques of radar signal processing and analysis.

Learning objectives
Students will know about concepts and principles to detect objects as well as to determine the angular position and range of objects. They learn about the functional principles of various radar systems, including signal processing. They will understand the major physical propagation effects.

Recommended prerequisites for participation
Fundamentals of Communications, Microwave Engineering I

Form of examination
Module exam:
- Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)

Prof. Dr. phil. nat. Marc Fischlin

1 **Teaching content**
- Overview of Net-Centric Computing (NCC), a basic element of modern computer science. Fundamental network concepts of modeling, planning and evaluating net-centric systems
  - Foundations: Service, protocols, connection, layer model
  - Protocol mechanisms for media access, routing, broadcast/multicast
  - Multimedia Data Handling
  - Aspects of continuous data streams and their processing
  - Quality of service: definition and mechanisms
  - Multimedia - Synchronisation: Basics
  - Compression procedures;

2 **Learning objectives**
- Overview knowledge of relevant areas and basic problems of net-centric computing (NCC)
- Reproducible comprehension of selected, elementary algorithms, protocols and procedures used in the internet
- Applicable methodological knowledge of widely applied elements of the modeling and engineering of NCC-systems

NCC is, in this context, understood as "internet technology in the broadcast sense". It covers, in particular, themes of the "classical areas" constituted by computer networks, distributed systems, multimedia and mobile communication/mobile computing, as those from "modern areas", such as ubiquitous/pervasive computing, peer-to-peer-computing or ambient intelligence. The canonical lecture "Introduction to NCS" focusses on the area of computer networks, the understanding of which is fundamental for all other listed areas; the latter will be the subject matter of advanced lectures in the area of NCS.

3 **Recommended prerequisites for participation**
Recommended:
Funktionale und objektorientierte Programmierkonzepte“, „Algorithmen und Datenstrukturen“, „Betriebssysteme“, „Einführung in den Compilerbau“, „Rechnerorganisation“ und „Systemnahe und parallele Programmierung“.

4 **Form of examination**
Course related exam:
- [20-00-0016-iv] (Technical examination, Oral/written examination, Default RS)

5 **Prerequisite for the award of credit points**
Pass exam (100%)

6 **Grading**
Course related exam:
- [20-00-0016-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**
B.Sc. Informatik
B.Sc. Wirtschaftsinformatik
B.Sc. Psychologie in IT
Joint B.A. Informatik
B.Sc. Sportwissenschaft und Informatik
M.Sc. Sportwissenschaft und Informatik
B.Sc. Informationssystemtechnik
May be used in other degree programs.

8 Grade bonus compliant to §25 (2)
In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.

1. **Teaching content**
The course presents fundamental concepts, models, and theories in the area of Human Computer Interaction (HCI). More specifically, it contains the following topics:
- Theoretical foundation on psychology and interaction design as basis for the design of intuitive user interfaces
- Overview of the different types of user interfaces
- Command line interfaces
- Graphical user interfaces (MacOS, Windows, …)
- Interactive surfaces (Tabletops, Multitouch, …)
- Mobile user interfaces (iOS, Android, …)
- Pen-based user interfaces (electronic pens)
- Tangible user interfaces, organic user interfaces
- Speech-based user interfaces
- Evaluation, measurement and assessment of user interfaces
- User studies
- Quantitative evaluation
- Qualitative evaluation
- User-centric software development

2. **Learning objectives**
After participation in this course, students will have
- an understanding of the psychologic foundations of the design of user interfaces
- know methods of the user-centric design process
- acquired an overview on common UI concepts
- learnt to know and how to use techniques for the evaluation of user interfaces

3. **Recommended prerequisits for participation**

4. **Form of examination**
Course related exam:
- [20-00-0535-iv] (Technical examination, Oral/written examination, Default RS)

Prof. Dr.-Ing. Marius Pesavento

1 Teaching content
This lecture course introduces the principles of modern sensor array processing and adaptive beamforming.
Outline: Motivation and background; applications, narrowband and wideband signal model
Direction-of-arrival estimation (DoA):
- traditional methods based on beamforming, super resolution methods, Maximum-Likelihood methods, Subspace based methods, MUSIC, ESPRIT, MODE, root-MUSIC, multidimensional source localization, approximate Maximum Likelihood methods, Expectation Maximization (EM) algorithm, partial relaxation method, beamspace processing, array interpolation, partly calibrated arrays, wideband DOA estimation, spatial smoothing, forward-backward averaging, redundancy averaging, correlated sources, minimum redundancy arrays, compressed sensing and sparse reconstruction based DoA estimation, performance bounds
- Adaptive beamforming:

2 Learning objectives
Upon completion of the module, students will have learned the application of theory and algorithms for processing Sensor-Array and Tensor data.

3 Recommended prerequisites for participation
Knowledge in linear algebra.

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS)
The examination takes place in form of a written exam (duration: 120 minutes). If one can estimate that less than 10 students register, the examination will be an oral examination (duration: 20 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
BSc / MSc etit, BSc / MSc WI-etit, MSc MEC, MSc iST, MSc iCE

8 Grade bonus compliant to §25 (2)

1 Teaching content
The module provides an introduction to the emerging field of machine learning from an engineering perspective. Important models and learning methods are presented and exemplified through problems from information and communication technology.

- Fundamentals of probability theory and multivariate statistics
- Taxonomy of machine learning problems and models (supervised, unsupervised, generative, discriminative)
- Regression and classification: theory, methods and ICT applications
- Dimensionality reduction, clustering and big data analytics: methods and application in communications and signal processing
- Probabilistic graphical models: categories, inference and parameter estimation
- Fundamentals of Bayesian inference, Monte Carlo methods, Bayesian non-parametrics
- Fundamentals of convex optimization: Solution methods and application in communications
- Approximate algorithms for scalable Bayesian inference; application in signal processing and information theory (e.g. decoding of LDPC codes)
- Hidden Markov models (HMM): Theory, Algorithms and ICT applications (e.g. Viterbi decoding of convolutional codes)
- High-dimensional statistics (“large p small n” setting), learning dependency structure in high-dimensional data, learning causality relations from observational data.
- Sparse estimation, random projections, compressive sensing: Theory and applications in signal processing
- Deep neural networks (deep learning): Models, learning algorithms, libraries and ICT applications

2 Learning objectives
Students are able to interpret and categorize specific engineering problems from the ICT domain in terms of machine learning problems.

They are able to reduce such problems to standard machine learning problems and are able to determine suitable solution methods for them.

They are able to implement all necessary algorithms from scratch, but they are also familiar with the state-of-the-art libraries in machine learning.

They are able to determine the involved computational complexity of a method and choose an appropriate solution algorithms based on application constraints.

They are able to apply the acquired methods to other domains, such as data analysis in biomedical engineering, analysis of social network data, etc.

3 Recommended prerequisites for participation
Good command of Matlab (for instance knowledge from course 18-st-2030 Matlab Grundkurs) and engineering mathematics

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS)

The examination takes place in form of a written exam (duration: 120 minutes). If one can estimate that less than 10 students register, the examination will be an oral examination (duration: 30 min.). The type of examination will be announced in the beginning of the lecture.
5  **Prerequisite for the award of credit points**
   Passing the final module examination

6  **Grading**
   Module exam:
   • Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7  **Usability of the module**
   MSc etit, BSc/MSc iST, MSc iCE, MSc CE

8  **Grade bonus compliant to §25 (2)**

1. **Teaching content**

   **Objectives:**
   - Knowledge of technical basics of the mobile communication
   - Knowledge of important challenges of the Ubiquitous Computing
   - Methodic knowledge about current approaches to these challenges

   **Course Content:**
   - Introduction to Ubiquitous Computing
   - Mobile Communication
   - Internet of Things: RFID and Smart Items
   - Service Discovery & Cloudlets
   - Context- and Location-aware Computing
   - Human Computer Interaction
   - Privacy and Trust in Ubiquitous Computing

2. **Learning objectives**

   After successfully attending the course, students are familiar with the technical basis of mobile communication. They understand the fundamental challenge of ubiquitous computing. They know current approaches to solve these challenges. They are able to apply their knowledge to build ubiquitous computing systems.

3. **Recommended prerequisites for participation**

   Computer Netzwerke and Distributed Systems

4. **Form of examination**

   Course related exam:
   - [20-00-0120-iv] (Technical examination, Oral/written examination, Default RS)

5. **Prerequisite for the award of credit points**

1 Teaching content
The lecture discusses the working principle of the most important devices and components of modern telecommunication networks and optical data transmission systems. The starting point will be basic physical principles:
- The nature of light
  - Wave equation
  - Polarization
  - Absorption, transmission, reflection, refraction
  - Mirrors, HR-/AR coatings
- Waveguides
  - Fiber-optic waveguides
  - Attenuation, modes, dispersion
  - Fiber types
  - Connectors and splices
  - Dispersion and dispersion compensation
  - Kerr nonlinearity and self-phase modulation
- Components, e.g.:
  - Optical filters
  - Wavelength division multiplexers
  - Magneto-optical effect / optical isolator / circulator
  - Electro-optic modulator
- Lasers
  - Basics, concepts, types
  - Erbium-doped fiber lasers / amplifiers (EDFL / EDFA)
  - Optical semiconductor laser / amplifier (laser diode)
- Other selected components and devices

2 Learning objectives
Students understand concepts, basics of physics, design criteria and system requirements (component specifications) of the most important passive and active components of optical communications.

3 Recommended prerequisites for participation
etit 1 + 2, Physics

4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module
BSc ETiT, MSc ETiT, MSc iCE

1 Teaching content
The course covers the following topics:
- Python programming basics
- Data science introduction
- Data storage and formats
- Data exploration and visualization
- Statistical methods and inference
  - Descriptive statistics (uni & bivariate)
  - Inferential statistics
- Feature extraction
  - Time Series Data
  - Image data
  - Audio data
- Statistical learning
  - Cross-validation, overfitting, annotation
  - Regression
  - Classification

2 Learning objectives
This module offers an introduction to the topic of Data Science with a strong practical orientation. Students gain knowledge about all parts of a Data Science processing: From storage/data acquisition over inferential statistics to visualization.

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)
The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 16 students register, the examination will be an oral examination (duration: 45 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:

Prof. Dr.-Ing. Abdelhak Zoubir

1 Teaching content
The course covers the following topics:
- Data Science Advanced Methods
- Data Management + Big data frameworks
- Statistical Learning
  - Recommender Systems
  - Deep Learning
  - Unsupervised Learning
  - Text data analysis
- Final application project. Flexibility to choose from list of projects or come up with own project. Examples:
  - Sound classification
  - Heart rate analysis
  - Activity recognition with acceleration data
  - Hyperspectral data
  - Image classification
  - Health survey

2 Learning objectives
After successful completion of the module, the students have an in-depth understanding of data science with a strong practical relevance. They have become familiar with modern data science technologies (from big data to novel methods in machine learning) and can apply them in a project with real world data.

3 Recommended prerequisites for participation
Data Science I (Lecture)

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Duration: 90 Min., Default RS)
Report and/or Presentation and/or Colloquium. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

1 Teaching content
This summer school covers the fundamentals and the latest developments of microwave electronics, THz technology, and optical communication systems with particular focus on the physical concepts involved.

2 Learning objectives
Students understand the presented research topics, e.g.
- topics of microwave engineering, THz engineering, and optical communications
- of related electronics
- the influence of the relevant properties of materials and of waveguides on signal processing.
They gain inside into the latest developments in these fields.

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral examination, Duration: 30 Min., Default RS)

Prof. Dr.-Ing. Marius Pesavento

1 Teaching content
The course covers the following topics:
- **Motivation, Applications**
- **Fundamentals**
  - definition of graphs, classes of graphs, properties of graphs, signals defined over graphs
  - Adjacency matrix, Graph Laplacian, Graph shift operator
  - Covariance matrix, conditional dependence, precision matrix
- **Graph signal processing**
  - Consensus, Diffusion
  - Graph spectral analysis, Graph Fourier Transform
  - Total variational norm, Graph Frequencies
  - Bandlimited graph signals, smoothness
  - Graph filters, Graph sampling theorem
  - Applications
- **Network topology inference**
  - Link prediction
  - Association network inference
  - Tomographic network topology inference
  - Pearson product-moment correlation
  - Causality, Partial correlation
  - Conditional independence graph
  - Gaussian Markov Random Fields
  - Graphical LASSO, Graphical LASSO with Laplacian constraint
  - Applications
- **Graph analysis**
  - Subgraph identification
  - Cliques identification
- **Optimization over graphs**
  - Average consensus, diffusion, exact diffusion
  - Gradient tracking, push-sum algorithm, etc.
  - Applications
- **Graph neuronal (convolutional) network**

2 Learning objectives
Graph signal processing (i.e., the processing of signals defined over graphs) and network analysis form an interdisciplinary research field with numerous and diverse applications. Upon completion of the module, students will have gained systematic knowledge in graph signal processing theory, graph network analysis, graph topology learning, optimization in graph networks, and learning using graph neural networks. They have learned essential concepts, algorithms and application areas of graph signal processing.

3 Recommended prerequisites for participation
Basic knowledge in linear algebra and matrix analysis.

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS)
In general, the examination takes place in form of a written exam (duration: 120 minutes). If up to 20 students register in semesters in which the lecture does not take place, there will will be an oral examination (duration: 20 min.). The type of examination will be announced within one working weeks after the end of the examination registration phase.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
MSc (WI-) etit, BSc/MSc iST, MSc iCE

8 Grade bonus compliant to §25 (2)

| The course covers the following topics:  
  • Resilience in the different disciplines  
  • Resilience in communication networks  
  • Importance of resilience for communication networks  
  • Requirements for current communication networks  
  • Methods to increase resilience in communication networks  
    – Wireless networks (e.g., mobile communications)  
    – Wired networks  
  • Resilient network management in software-defined networks  
  • Resilience through adaptivity in software-defined networks  | Students are familiar with the idea and necessity of resilience in various disciplines with a focus on adaptive communication networks. They are familiar with various methods for increasing resilience, such as redundancy and diversity, and can apply these methods to the design of communication networks. |  |
| Form of examination | Prerequisite for the award of credit points | Grading |
| Module exam:  
  • Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)  
  The examination takes place in form of a written exam (duration: 90 min.). If one can estimate that less than 10 students register, the examination will be an oral examination (duration: 30 min.) The type of examination will be announced in the beginning of the lecture. | Passing the final module examination | Module exam (Technical examination, Oral/written examination, Weighting: 100 %) |
| Usability of the module | Grade bonus compliant to §25 (2) | References |
| MSc WI-etit, BSc/Msc iST, MSc iCE | Grade improvements up to 0.4 according to APB 25(2) through bonus for regularly completed and submitted bonus exercises. |  |

### Teaching content
This module covers in-depth knowledge about transport protocols and related aspects. We will consider robustness, ease of implementation, efficiency, performance and reliability. Of particular interest will be how to model the protocol behavior and the interplay of transport protocols with other layers of the Internet protocol stack. The focus will be on the Transmission Control Protocol (TCP) and its variants.

### Learning objectives
After taking this module, students understand the protocol mechanisms of the transport layer in detail, including their interplay within the layer and with other protocol layers. They can use this knowledge to predict and evaluate the effects of protocol modifications. To this end, they are able to analyze the behavior of transport protocols and to assess the impact of key parameters including latency, bandwidth and buffer size on the suitability of different design variants.

### Recommended prerequisites for participation
Basic knowledge in the field of communication networks, as covered for instance in the module „Kommunikationsnetze 1“.

### Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS)

The examination takes place in form of a written exam (duration: 120 minutes). If one can estimate that less than 30 students register, the examination will be an oral examination (duration: 30 min.). The type of examination will be announced in the beginning of the lecture.

### Prerequisite for the award of credit points
Passing the final module examination

### Grading
Module exam: (Technical examination, Oral/written examination, Weighting: 100 %)

### Usability of the module
MSc etit, BSc/MSc iST, MSc WI-etit

### Grade bonus compliant to §25 (2)
Yes

### References
Technical literature will be mentioned in the lecture.

Module name
Application-Layer Protocols on the Internet

Module nr.
18-sm-2330

Credit points
6 CP

Workload
180 h

Self-study
105 h

Module duration
1 Term

Module cycle
Irregular

Language
German

Module owner
Prof. Dr. rer. nat. Björn Scheuermann

1 Teaching content
The module covers in-depth knowledge on application architectures and application-layer protocols used on the Internet. This includes widely used client-server protocols like HTTP as well as distributed architectures (peer-to-peer systems, blockchains, etc.). The focus is on tradeoffs between design alternatives and the acquisition of the skills to design and implement efficient and effective protocols on the application layer.

2 Learning objectives
After taking this module, students understand the key questions that the design of an application-layer protocols poses. They understand the design space and are able to recognize and avoid common problems and mistakes. They can apply this knowledge to design and analyze protocol designs, and they are able to design suitable protocol mechanisms for practically relevant design problems.

3 Recommended prerequisites for participation
Basic knowledge in the field of communication networks, as covered for instance in the module „Communication Networks I“.

4 Form of examination
Module exam:
• Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS)
The examination takes place in form of an oral examination (duration: 30 minutes). If one can estimate that more than 30 students register, the examination will be a written exam (duration: 120 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
• Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
MSc etit, MSc WI-etit, BSc/MSc iST

8 Grade bonus compliant to §25 (2)
Announcements will be made at the beginning of the semester as to whether there will be homework assignments to accompany the lecture that will improve grades.

9 References
Technical literature will be mentioned in the course.

1 Teaching content
This seminar series covers addresses latest trends in Signal processing with focus on mobile communications, machine learning and optimization.

2 Learning objectives
Students understand the presented research topics, e.g., the latest trends in
- Signal processing
- Communications
- Graph signal processing
- Machine learning for communications and data analysis
- Coexistence of radar and communications
- Compressed sensing and sampling theory
- Convex Optimization

Students learn to prepare themselves for the participation in a scientific seminar based on reference to the scientific literature.
Students learn to participate in scientific seminars, to contribute with thoughtful comment and appropriate questions and to initiate a fruitful scientific discussion.
Students learn to summarize the main scientific findings and statements of the talk in a short written report.
Students learn to summarize the main scientific findings of the talk in a scientific discussion and to defend the main statements.

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation and/or Colloquium. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
MSc etit, BSc/MSc iST, MSc WI-etit

8 Grade bonus compliant to §25 (2)

Prof. Dr.-Ing. Rolf Findeisen

1 Teaching content
Cyber-physical systems and multi-variable systems: Aspects and fundamentals of multivariable, interconnected, and cyber-physical systems, control & systems theory concepts (stabilizability, controllability, observability, detectability, reachability, resilience, control & estimation of multivariable systems...), systems and graphs, networked control systems (control & estimation over communication networks, control subject to delays/to information loss, security, safety, and privacy), control of interconnected/multi-agent systems (centralized, decentralized & distributed control, consensus, synchronization), hierarchical control (fundamentals, optimization, time scale separation, hierarchical control concepts, optimization based control & real-time optimization)

2 Learning objectives
The students are familiar with the basic analysis and control methods for multivariable systems, networked control systems, and interconnected systems and their applications. They are able to model and analyse multivariable, interconnected systems, and networked control systems subject to delays, communication loss. Furthermore, they are able to design basic centralized, decentralized, distributed, hierarchical controllers and estimators, as well as controllers to achieve consensus and synchronization control. They are familiar with the concept of time-scale separation for control and estimation.

3 Recommended prerequisites for participation
Basic concepts of control theory. Fundamentals of linear algebra, differential and difference equations.

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)
The examination takes place in form of a written exam (duration: 90 minutes). If less than 25 students register, the examination will be an oral examination (duration: 25 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

8 Grade bonus compliant to §25 (2)

1 Teaching content

Part I: Classical theory of unconstrained and constrained optimization:
- useful facts from analysis (differentiable functions, gradients, Hessian matrices, convex functions)
- necessary and sufficient conditions of extremum
- unconstrained optimization problem: existence, uniqueness, and stability of solution, gradient descent in convex optimization, its convergence and convergence rate
- Karush-Kuhn-Tucker condition
- optimization subjected to convex simple constraints, gradient projection method and its convergence properties
- optimization subjected to inequality constraints, primal-dual approach, Lagrangian, Arrow-Hurwicz-Uzawa iterative procedure

Part II: Optimization in multi-agent systems: Distributed (cooperative) optimization
- consensus in multi-agent systems, motivating examples
- communication protocols: gossip, weight-balanced communication
- consensus algorithm and its convergence (with the proof for weight-balanced communication)
- distributed optimization problems in multi-agent systems, motivating examples
- gradient-based procedure with weight-balanced communication and its convergence
- constrained distributed optimization (motivating examples, projected gradient-based procedure with weight-balanced communication and its convergence, discussion on the primal-dual approach)
- state of the art (convergence rate discussion, unbalanced communication, modern applications and their challenges)

Part III: Optimization in multi-agent systems: Game-theoretic (non-cooperative) optimization
- general game formulation, examples
- Nash equilibrium concept
- discrete action games, existence of a mixed-strategy Nash equilibrium
- continuous action games (continuous action games with convex cost functions, examples)
- variational inequalities, game mappings, and their connection to Nash equilibria problems in convex games
- existence and uniqueness of Nash equilibrium in convex games
- gradient methods in convex games (convergence in the case of games with strongly monotone mappings, non-convergence in the case of games with purely monotone mappings, regularized algorithms and their convergence)
- state of the art (convergence rate discussion, information settings in the system: communication- and payoff-based methods, modern applications and their challenges)

2 Learning objectives
Firslly, students refresh the knowledge on the classical results in convex optimization. Next, students deal with two main types of optimization problems in multi-agent systems: cooperative and non-cooperative optimization. Some practical examples are demonstrated. Students learn how to solve cooperative optimization problems by mean of consensus-type communication-based algorithms in the networked multi-agent systems. Moreover, they get insights in the modern applications and current challenges of cooperative optimization. In the case when each agent in a multi-agent system follows the goal to optimize its own objective a so-called non-cooperative game-theoretic optimization problem is formulated in the system. Students are able to formulate this problem, namely to define a game with its main component and solution concepts (action sets, individual cost funtions, Nash equilibria). Further the focus is on continuous action convex games. To find a solution (a Nash equilibrium in a given game), students use the connection between Nash equilibria in games and solutions of the corresponding variational inequalities. Furthermore, students are able to investigate the properties of the game (strongly/strictly monotone, merely monotone game) to apply an appropriate optimization procedure (gradient-based or regularized one) to achieve a solution. Finally, students get insights in different settings of information in the game-theoretic optimization (where only partial information is available to each agent) and know approaches that can be applied in each case.

3 **Recommended prerequisites for participation**
Mathematics I, II, III

4 **Form of examination**
Module exam:
• Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)

5 **Prerequisite for the award of credit points**
Passing the final module examination

6 **Grading**
Module exam:
• Module exam (Technical examination, Oral examination, Weighting: 100 %)

7 **Usability of the module**
MSc etit, MSc iCE, BSc/Msc iST, MSc WI-etit

8 **Grade bonus compliant to §25 (2)**

1 Teaching content
   Content and goals
   • Elaboration of a technical topic in cooperation with a research associate as supervisor
   • Detailed study of technical articles
   • Deeper understanding of the technical topic treated therein
   • Practical experience with technical documentation
   • Learning modern presentation techniques and their application
   • Presentation and discussion of the technical topic in front of a group of people

2 Learning objectives
The students are able to comprehend and analyze scientific texts, present technical facts in an orderly manner and present them in a structured manner. Using the example of an original work, they can correctly summarize it in writing and refer to its contents.

3 Recommended prerequisites for participation
Fundamental knowledge in microwave engineering, e.g. lecture "Hochfrequenztechnik 1".

4 Form of examination
Module exam:
   • Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or term paper and/or presentation (in preparation for the thesis). The type of examination will be announced at the beginning of the course.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
   • Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
BSc etit, BSc MEC, BSc iST

8 Grade bonus compliant to §25 (2)

1 Teaching content
Basic analog Building Blocks: Current- and Voltage sources, Stabilizing circuits, Current Mirrors, Reference Circuits; Multi Stage Amplifier, internal Structure and Properties of Differential and Operational Amplifiers, Feedback Techniques, Frequency Response, Clock Generation and Oscillators

2 Learning objectives
A student is, after successful completion of this module, able to

1. derive the fundamental properties of the MOS-Transistors from knowledge of the layout or fabrication process,
2. derive fundamental MOSFET-circuits (current source, voltage source, current mirror, switch, active resistors, inverting amplifiers, differential amplifiers, output amplifiers, operational amplifiers, comparators) and knows their fundamental properties (y-Parameters, DC- and AC-properties),
3. understands simulation methods for analog circuits on transistor level using SPICE,
4. analyze feedback amplifiers regarding frequency gain, stability, bandwidth, root locus, amplitude and phase-margin,
5. Analyze electronic circuits for voltage and current provision,
6. Analyze basic circuits for clock/waveform generation

3 Recommended prerequisites for participation
Lecture "Electronics"

4 Form of examination
Module exam:
   • Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

Prof. Dr.-Ing. Christian Hochberger

1 Teaching content
- Introduction to the MP3 encoding standard for audio signals
- Analysis of the individual steps of the decoding process wrt. the used algorithms
- Analysis of the individual steps of the decoding process wrt. the storage of intermediate results
- Design and configuration of the datapath to realize the individual process steps
- Simulation on functional level and with timing annotation
- Check, whether the design meets all restrictions
- Test of the final HW design with all relevant MP3 variants (short and long frames)

2 Learning objectives
After successfully completing the module, students will be able to map complex processes onto a digital target architecture by hand. They master the tools for implementing their solution on an FPGA. They know strategies to systematically search for errors. They can explore a design through simulation.

3 Recommended prerequisites for participation
Basic knowledge of digital design

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral examination, Duration: 30 Min., Default RS)

Instructor
Prof. Dr.-Ing. Christian Hochberger
These labs are intended for students interested in obtaining hands-on practical experience with the design and implementation of embedded systems.

The labs will begin by introducing fundamentals such as

- basic electrical engineering
- using lab test and measurement instruments
- design and fabrication of electronic circuits
- acquiring and processing data from sensors
- bus protocols in embedded systems
- programming and debugging heterogeneous embedded systems
- the use of the Linux kernel as an operating system in an embedded context

The lab core then has the participants implement a concrete embedded system. A number of possible projects will be offered, each with a different focus (e.g., hardware or software) to match student interest.

After successful completion, students are familiar with the practical techniques and tools required for designing, implementing and bringing-up embedded hardware/software systems.

This includes basic knowledge of electrical engineering, the use of lab test and measurement instruments, the use of languages and EDA/CAD tools for hardware design. They are able to program and debug software in an embedded systems context as well as employ Linux as an operating system here.

Recommended: Successful completion of „Digital Design“, „Computer Organisation“, „Architecture and Design of Computer Systems“, „Operating Systems“ and „System-level and Parallel Programming“ or similar competencies obtained in other study programmes

Course related exam:
- [20-00-0959-pr] (Study achievement, Oral/written examination, Default RS)

Pass exam (100%)

Course related exam:
- [20-00-0959-pr] (Study achievement, Oral/written examination, Weighting: 100 %)

1 **Teaching content**
Realisation of a VHDL- or Verilog-based VLSI System Design Project in a Team with industrial constraints

2 **Learning objectives**
A student is, after successful completion of this module, able to

1. design, optimize and verify a complex digital system (e.g. a pipelined CPU or signal processor) using Verilog or VHDL,
2. synthesize the HDL description using commercial CAD software to a gate level description

After successful completion of this module the students are able to work constructively on a feasible solution. Aside, they are able to mutually support each other and present intermediate results to peers, and achieve an overall feasible solution.

3 **Recommended prerequisites for participation**
Lecture Computer Aided Design for System on Chips, At least one high-level Programming Language, Basic Know-How Linux/Unix, Computer Architectures

4 **Form of examination**
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report (including submission of programming code) and/or Presentation and/or Oral examination (25 minutes) and/or Colloquium (testate), but never more than two out of it. The type of examination will be announced in the beginning of the lecture.

5 **Prerequisite for the award of credit points**
Passing the final module examination

6 **Grading**
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**
BSc/MSc ETiT, BSc/MSc Wi-ETiT, MSc iCE, BSc/MSc iST, BSc/MSc MEC, MSc EPE

8 **Grade bonus compliant to §25 (2)**

Prof. Dr.-Ing. Christian Hochberger

1 Teaching content
Students elaborate on a research-oriented subject in the area of computer-systems. They present a written documentation and a presentation of the acquired advanced knowledge. They provide a set of alternative solutions to a given problem.

2 Learning objectives
Students are able to systematically develop design alternatives to a given problem. They learn to acquire the necessary fundamental knowledge in terms of references and terminology.

3 Recommended prerequisites for participation
Basic knowledge of digital design

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
BSc ETiT, BSc/MSc iST

Prof. Dr.-Ing. Christian Hochberger

1 Teaching content
Mapping of behavioral descriptions (e.g. in the form of program fragments) on FPGA and CGRA structures
- Sub-tasks allocation, scheduling, binding
- Exact or heuristic solutions
- Design principles of heuristic solutions

2 Learning objectives
Students that have completed this module know alternative approaches for all of the tasks of the high level synthesis and can select appropriate ones for specific applications. They can evaluate the memory and time complexity of the given algorithms. They are enabled to adapt the algorithms for new constraints and new target technologies.

3 Recommended prerequisites for participation
Knowledge of hardware synthesis on the basis of at least one hardware description language is required (e.g. Reese/Thornton: Introduction to Logic Synthesis Using Verilog Hdl oder Brown/Vranesic: Fundamentals of Digital Logic with VHDL Design). The student should have basic knowledge of at least one object oriented programming language, preferably Java

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Oral examination, Weighting: 100 %)

7 Usability of the module
MSc ETiT, BSc/MSc iST, MSc iCE

8 Grade bonus compliant to §25 (2)

Module owner
Prof. Dr.-Ing. Christian Hochberger

1 Teaching content
The module deals with synthesis steps on all abstraction layers below the register transfer level focusing on approaches suitable for FPGAs. At the logic level different types of minimization are explained (exact and heuristic two level minimizations, exact and heuristic multi level logic minimizations). The transition to the technology level is achieved by different decomposition and structural mapping techniques (FlowMap). Place&Route add geometric information to the technology mapped circuit. Analytical and heuristic placers are discussed (Simulated Annealing, Genetic Placers) and routing is illustrated through the PathFinder algorithm.

2 Learning objectives
After completion of the module, students are enabled to investigate synthesis approaches for low level synthesis tasks. They can evaluate these approaches regarding their time and space complexity, as well as regarding their applicability to specific implementation technologies. Students can apply these approaches to new architectures and technologies.

3 Recommended prerequisites for participation
Knowledge of hardware synthesis on the basis of at least one hardware description language is required (e.g. Reese/Thornton: Introduction to Logic Synthesis Using Verilog Hdl oder Brown/Vranesic: Fundamentals of Digital Logic with VHDL Design). The student should have basic knowledge of at least one object oriented programming language, preferably Java.

4 Form of examination

Module owner
Prof. Dr.-Ing. Christian Hochberger

1 Teaching content
Students will work on their own or in two-person teams in this course. Topics and application context will be defined individually for each group. In this course reconfigurable architectures will be investigated. This particularly means the extension, improvement, or adaptation of components and tools for reconfigurable architectures as well as the prototypical implementation of applications on such reconfigurable architectures. Usually, the course starts with a literature search to get acquainted with the underlying architecture. This is followed by the practical part and finally the results are presented in a written report and a presentation.

2 Learning objectives
Successful students will know how to use reconfigurable systems within a given application context. They can use tools to program these systems and know how to map an application onto a given reconfigurable architecture. They are capable to evaluate the performance critical parts of an application. They understand the implications of different coding styles for a particular task.

3 Recommended prerequisites for participation
- Knowledge of reconfigurable devices (cf. course computer systems II)
- Knowledge of computer architecture (cf. course computer systems I)
- Solid programming skills (either in C or Java depending on the application scenario).

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
MSc ETiT, MSc iST, MSc Informatik, MSc iCE

8 Grade bonus compliant to §25 (2)

9 References
Will be given to the students during the individual seminar kick-off meeting.

1. **Teaching content**
   Primary goal of this module is to get an overview of current trends in the ICT industry. Also, students shall be linked to industry representatives to improve chances for an internship or job opportunities. Additionally, students will get an impression of different ways to give a technical presentation.

2. **Learning objectives**
   Students that have successfully finished this module know various job types in the area of computer engineering. They can follow a technical presentation and they can summarize the presentation in their own words as a written report.

3. **Recommended prerequisites for participation**
   Mandatory: Basic knowledge in Information Systems and Communication Systems. The student has to be capable to understand the technical aspects and to summarize them in a written report as a short paper.

4. **Form of examination**
   Module exam:
   - Module exam (Study achievement, Report, Default RS)
   - Report (including submission of programming code)

5. **Prerequisite for the award of credit points**
   Passing the final module examination

Module owner
Prof. Dr.-Ing. Andreas Koch

1 Teaching content
The course covers current topics in research and development of computing systems and programming tools, including focused ones in the areas of embedded and application-specific architectures. The subjects are determined by current research efforts in the ESA group and are intended to guide students towards acquiring technical as well as introductory scientific skills, for example, including one or more of the following domains:

- Computing systems architecture at the processor and systems-level
- Design of digital electronic circuits and hardware systems
- Use of Field-Programmable Gate Arrays
- Hardware/Software design and programming tools
- Operating systems and low-level programming
- Hardware/Software Co-Design
- Application-specific architectures and techniques
- Design and/or programming of compute accelerators
- Debugging and analysis techniques for hardware/software-systems

2 Learning objectives
Participants are intended to acquire the skills necessary to quickly become familiar with a new domain and then solve a complex practical problem within that domain. These skills can include studies of scientific literature, surveying existing code-bases from the hardware/software domains, and the practical implementation of hardware and/or software systems. The final talk should show proficiency with basic presentation techniques.

3 Recommended prerequisites for participation
An interest to develop high-quality solutions in the assigned problem domain. For different domains, different pre-requisites will be required. These can include digital design, compiler construction, system-level and parallel programming. Such skills can be acquired by successfully completing the appropriate lectures.

4 Form of examination
Course related exam:
- [20-00-1001-pp] (Study achievement, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:
- [20-00-1001-pp] (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
B.Sc. Informatik
M.Sc Informatik
May be used in other degree programs.

8 Grade bonus compliant to §25 (2)

1 Teaching content
Microprocessor Architectures, DSP Architectures and Hardware related Programming

2 Learning objectives
Upon successful completion of the module, students will be able to:

1. gain the overview on the fundamentals of computer architecture and the different processor classes (RISC, CISC, Mikrocontroller, CPU, DSP),
2. understand the central building blocks of a CPU
3. understand the major properties of the required semiconductor memories, I/O blocks and data busses (USB, PCI, RS232),
4. understand the most commonly used Interrupt- and Trap-handling algorithms,
5. know the common software development methodologies for microcontrollers (assembler, pseudooperations, makros, subprograms and subroutines),
6. understand the most important fundamentals of hardware oriented programming using C.

3 Recommended prerequisites for participation
Basics of Computer Architectures

4 Form of examination
Module exam:
• Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

1. **Teaching content**  
   CAD-Concepts for the design and simulation of integrated system-on-chips

2. **Learning objectives**  
   A student is, after successful completion of this module, able to understand
   - the most important design and verification abstractions as well as the design flow for the design of integrated electronic systems,
   - selected algorithms for optimization, simulation and solving of design tasks,
   - advanced methods for the design and simulation of analog integrated circuits in modern CMOS technologies,
   - advanced concepts of hardware description languages and their concepts (Verilog, VHDL, Verilog-A, Verilog-AMS, System-Verilog)

3. **Recommended prerequisites for participation**  
   Lecture "Advanced Digital Integrated Circuit Design" (can be attended in parallel) and „Electronic and Integrated Circuits“ and "Logic Design"

4. **Form of examination**  
   Module exam:  
   - Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5. **Prerequisite for the award of credit points**  
   Passing the final module examination

6. **Grading**  
   Module exam:  
   - Module exam (Technical examination, Examination, Weighting: 100 %)

7. **Usability of the module**  
   MSc ETiT, MSc iST, MSc MEC, MSc Wi-ETiT, MSc iCE

8. **Grade bonus compliant to §25 (2)**  
   A grade improvement of up to 1,0 due to a bonus is possible, which can be earned by successful participation in the embedded labs.

1 **Teaching content**
Participants independently solve alone or in a small group an individually posed problem from the area of Computer Engineering. The problems are usually programming or hardware development tasks inspired by the research performed at the Embedded Systems and Applications Group.

2 **Learning objectives**
After successfully completing the labs, the participant/s is/are able to independently solve a complex problem in the field of Computer Engineering. They can evaluate the quality of their solution and compare and contrast it with other existing solutions.

3 **Recommended prerequisites for participation**
Depending on topic.

4 **Form of examination**
Course related exam:
- [20-00-0647-pr] (Study achievement, Oral/written examination, Default RS)

5 **Prerequisite for the award of credit points**
Pass exam (100%)

6 **Grading**
Course related exam:
- [20-00-0647-pr] (Study achievement, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**
- B.Sc. Informatik
- M.Sc. Informatik
- B.Sc. Computational Engineering
- M.Sc. Computational Engineering
- M.Sc. Wirtschaftsinformatik
- B.Sc. Psychologie in IT
- Joint B.A. Informatik
- B.Sc. Sportwissenschaft und Informatik
- M.Sc. Sportwissenschaft und Informatik

Can be used in other degree programs.

8 **Grade bonus compliant to §25 (2)**

1. **Teaching content**
   Printing technologies for functional printing (printing methods and systems); Design and materials for printed electronics (aerial, OFET, RFID); Activities for quality assurance; Examples of application (aerial, RFID, OFET, photovoltaic, batteries, lab on a chip).

2. **Learning objectives**
   On successful completion of this module, students should be able to:
   1. Describe the printing technologies that are applicable for “Printed Electronics”.
   2. Name materials that are appropriate to printing processes and to describe the impact of the materials on the design e.g. of antennas and OFETs.
   3. Classify and rate different activities for quality assurance.
   4. Explain basic functions, configurations, materials, and specific properties of printed antennas, RFID, photovoltaics and batteries.
   5. Describe “Printed Electronics” as a multidisciplinary task that consists of electrical engineering, material science, and mechanical engineering.

3. **Recommended prerequisites for participation**
   Mechanical components and Mechatronics I and II recommended

4. **Form of examination**
   Module exam:
   - Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)
   Oral exam 30 min

5. **Prerequisite for the award of credit points**
   Passing the examination

6. **Grading**
   Module exam:
   - Module exam (Technical examination, Oral examination, Weighting: 100 %)

7. **Usability of the module**
   WPB Master MB III (Wahlfächer aus Natur- und Ingenieurwissenschaft)
   WPB Master PST III (Fächer aus Natur- und Ingenieurwissenschaft für Papiertechnik)
   Master ETIT IMNT; Master Mechatronik

8. **Grade bonus compliant to §25 (2)**

9. **References**
The current lecture notes can be downloaded from the web pages of the institute while the semester is in session.

1. **Teaching content**
   These practical labs are intended for students interested in learning how to design hardware accelerators for systems-on-chips.

   It covers a wide range of topics, including

   - OS drivers for accelerators
   - design and interfacing of accelerators in Bluespec SystemVerilog
   - Design flows and tool chains for hardware/software co-development

   The actual accelerators covered are inspired by typical applications, e.g., image processing or stereovision computations.

2. **Learning objectives**
   Acquire skills in using the knowledge and techniques taught in prior classes to actually perform a complete hardware/software co-design of an application in an embedded systems context.

3. **Recommended prerequisites for participation**
   Basic knowledge using Linux on embedded Systems (e.g., acquired in ESHO1). Knowledge of the Bluespec SystemVerilog hardware description language (e.g., as taught in Architecture and Design of Computing Systems).

4. **Form of examination**
   Course related exam:
   - [20-00-0968-pr] (Study achievement, Oral/written examination, Default RS)

5. **Prerequisite for the award of credit points**
   Pass exam (100%)

1 **Teaching content**

The module teaches basic principles of different sensors and the required knowledge for correct application of sensors. With regard to the measurement chain, the focus of the course is on the conversion of any, generally non-electrical quantities into electrically evaluable signals. Resistive, capacitive, inductive, piezoelectric, optical, and magnetic measurement principles are covered in the module to provide knowledge of the measurement of important quantities such as force, torque pressure, acceleration, velocity, displacement, and flow. In addition to a phenomenological description of the principles and a derived technical description, the main elements of primary and secondary electronics for each measurement principle will also be presented and understood. In addition to the measurement principles, the description of errors will be dealt with. In addition to static and dynamic errors, errors in signal processing and error consideration of the entire measurement chain will be discussed. In the exercises the method of peer instruction is utilized.

2 **Learning objectives**

The students acquire knowledge of the different measuring methods and their advantages and disadvantages. They can understand error in data sheets and descriptions interpret in relation to the application and are thus able to select a suitable sensor for applications in electronics and information, as well process technology and to apply them correctly.

3 **Recommended prerequisites for participation**

Measuring Technique

4 **Form of examination**

Module exam:
- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 **Prerequisite for the award of credit points**

Passing the final module examination

6 **Grading**

Module exam:

1 Teaching content
* Processor architectures in embedded systems
* ARM instruction set and microarchitecture
* ARM compiler and simulator
* ARM bootloading and (realtime) operating systems
* ARM debugging, profiling and tracing
* ARM peripheral control
* ARM power management
* ARM application scenarios (Cortex-M/-A/-R)
* Future development of embedded processors
* Recent research results

2 Learning objectives
After successful participation, students are able to
* outline the essential components and functionality of embedded processors,
* differentiate the advantages and disadvantages of different processor architectures,
* use relevant development tools for embedded processors,
* examine the functionality and efficiency of existing source code,
* develop efficient source code for specific applications,
* assess recent embedded systems research results.

3 Recommended prerequisites for participation
Successful participation in "Rechnerorganisation" or similar

4 Form of examination

Prof. Dr.-Ing. Andreas Koch

1 Teaching content
FPGAs have been used very successfully in recent years to implement application-specific accelerators in heterogeneous systems. However, programming with conventional hardware description languages such as Verilog or VHDL is still the norm.

As an alternative, high-level synthesis tools that can also generate hardware from high-level languages such as C/C++ play an increasingly important role in the implementation of such accelerators. During this course you will gain useful background knowledge on the basic algorithms of high-level synthesis as well as knowledge in practical design and optimization of FPGA designs using high-level synthesis tools.

In addition, you will learn relevant techniques for the integration of FPGA-based accelerators into heterogeneous systems. During the practical phase of this course, you will create an FPGA-based accelerator for a given problem and implement it on a typical heterogeneous system in real hardware.

2 Learning objectives
- Understanding the basics of HLS systems
- Understanding of important internals of HLS systems (e.g. optimization, scheduling)
- Ability to design high-level language hardware accelerators and use HLS systems to generate executable FPGA designs
- Experience in troubleshooting and optimization of HLS generated hardware designs
- Experience in the integration of hardware accelerators into heterogeneous computing systems using hardware/software co-design tools.

3 Recommended prerequisites for participation
- Basics of Digital Logic (DT)
- Basic knowledge of compilers is disadvantageous, but not obligatory
- Using Linux systems and virtual machines

4 Form of examination
Course related exam:
  - [20-00-1081-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

### 1 Teaching content
- Training and inference of neural networks
- Challenges in accelerating neural networks
- Computation cost reduction in neural networks
- Neural networks acceleration with logic design and FPGAs
- Neural networks acceleration with in-memory-computing platforms

### 2 Learning objectives
Students that have completed this module know the development of neural networks and the challenges in accelerating neural networks with CPUs and GPUs. They can evaluate the computation cost of neural networks and select the corresponding methods to reduce the computation cost. They are also enabled to evaluate the performance of the different hardware acceleration platforms for neural networks.

### 3 Recommended prerequisites for participation
Basic programming skills in Python.

### 4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 60 Min., Default RS)

### 5 Prerequisite for the award of credit points
Passing the final module examination

### 6 Grading
Module exam:
- Module exam (Technical examination, Examination, Weighting: 100 %)

### 7 Usability of the module
MSc etit, MSc WI-etit, BSc/MSc iST, MSc iCE

### 8 Grade bonus compliant to §25 (2)

### 9 References

Module owner
Prof. Dr. rer. nat. Sebastian Schöps

1 Teaching content
The content of this course is the following:
- Circuit interpretation as directed graphs
- Modified nodal and loop analysis
- Flux and charge oriented formulations
- Differential algebraic equations
- Linear system solver
- Numerical solution of nonlinear systems
- Time-domain methods
- Frequency-domain solution
- Implementation of the numerical methods

2 Learning objectives
Students understand the theoretical and numerical fundamentals of circuit simulation and how the equations can be derived from Maxwell's equations. Circuit properties can be expressed in terms of graph theory. The sparse systems of equations such as the flux/charge oriented modified nodal analysis can be assembled. In order to solve the obtained systems, different numerical methods for the simulation of circuits are relevant. This includes methods for the solution of linear systems (direct and iterative solvers), root-finding algorithms for nonlinear systems and implicit time integration methods. Mathematical concepts such as stability, convergence order or complexity are known and can be employed to judge the advantages and disadvantages of the various methods. Eventually, the students are able to program their own circuit simulator, that can return both frequency as well as time domain solutions of electric networks.

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral examination, Duration: 20 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Oral examination, Weighting: 100 %)

7 Usability of the module
BSc/MSc etit, BSc/MSc iST, BSc MEC, MSc iCE, MSc WI-etit

8 Grade bonus compliant to §25 (2)
Grade bonus of 0,4 if correctly implemented programs are submitted

1 Teaching content

2 Learning objectives
After successful completion of the module, students are able to:

1. understand the use of electronic components in typical industrial environments,
2. understand the function of the building blocks of typical IE components,
3. deeply understand the functioning of analog building blocks,
4. understand relevant field bus systems,
5. understand the regulatory and technical standards of industrial electronics components.

3 Recommended prerequisites for participation
Lecture "Elektronik" and "Electronic and Integrated Circuits"

4 Form of examination
Module exam:
• Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)
The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 5 students register, the examination will be an oral examination (duration: 30 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
• Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
MSc ETiT, M.Sc. iCE, M.Sc. MEC

8 Grade bonus compliant to §25 (2)

1. **Teaching content**

The programming lab is divided into two parts.

In the first part of the lab, the basic concepts of the programming languages C and C++ are taught during the semester through practical exercises and presentations. All aspects will be deepened by extended practical exercises in self-study on the computer. For this purpose, all necessary materials such as presentation slides, presentation recordings, exercises, sample solutions of the exercises and recordings of the exercise discussions are provided in purely digital form.

The second part of the lab is about programming a microcontroller using the C programming language. For this purpose, the students are provided with a microcontroller for two days, with which they can work on practical programming tasks under supervision.

The following topics will be covered in the course:

- Basic concepts of the programming languages C and C++
- Memory management and data structures
- Object oriented programming in C++
- (Multiple) Inheritance, polymorphism, parametric polymorphism
- (Low-level) Programming of embedded systems with C

2. **Learning objectives**

During the module, students acquire basic knowledge of C and C++ language constructs. Additionally, they learn how to handle both the procedural and the object-oriented programming style. Through practical programming exercises, students acquire a feeling for common mistakes and dangers in dealing with the language, especially in the development of embedded system software, and learn suitable solutions to avoid them. Furthermore, through hands-on experience with embedded systems, students acquire additional expertise in low-level programming.

3. **Recommended prerequisites for participation**

Java skills

4. **Form of examination**

Module exam:

- Module exam (Study achievement, Oral/written examination, Default RS)

The examination has the form of a Report (including submission of programming code) and/or a Presentation and/or an Oral examination (25 minutes) and/or a Colloquium (testate), but never more than two out of it. From a number of 10 students registered for the course, the examination may take place in form of a written exam (duration: 90 minutes). The type of examination will be announced in the beginning of the lecture.

5. **Prerequisite for the award of credit points**

Passing the final module examination

6. **Grading**

Module exam:

- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7. **Usability of the module**

BSc ETiT, BSc MEC, BSc iST, BSc Wi-ETiT

8. **Grade bonus compliant to §25 (2)**

148
Grade improvements up to 1.0 according to APB 25(2) can be achieved through a bonus system for regularly submitted bonus assignments.

The content of the course is divided into 5 topics. For each topic (Fundamentals, Memory Management, Object Oriented Programming, Advanced Concepts, and C) there is one assignment sheet with one bonus assignment each, which must be solved and handed in by the students. The assignment is considered either pass or fail. Bonus credit is given in proportion to the ratio of passed bonus tasks and the total number of bonus tasks.

Total bonus = $1.0 \times \frac{\text{Number of passed tasks}}{\text{Total number of bonus tasks}}$

1 **Teaching content**
   The lecture basically covers a model-driven software engineering process which is specially customized for real-time systems. This process is more deeply explored in the exercise using an automotive example. A focus is laid on object-oriented techniques. In this context, a real-time specific state-of-the-art CASE tool is introduced and used. Furthermore, fundamental characteristics of real-time systems and system architectures are introduced. Scheduling algorithms are discussed to get insights into real-time operating systems. Finally, a comparison between the Java programming language and its expansion for real-time operating systems (RT Java) will conclude the lecture.

2 **Learning objectives**
   After successful completion of the module, students are able to use and evaluate model-based (object-oriented) techniques for the development of embedded real-time systems. This includes a deeper understanding of the following topics:
   - classification of real-time systems
   - create and analyze executable models
   - application of real-time scheduling algorithms
   - evaluation and comparison of pros/cons of real-time programming languages as well as real-time operating systems

3 **Recommended prerequisites for participation**
   Basic knowledge of software engineering techniques and excellent knowledge of at least one object-oriented programming language (preferably Java)

4 **Form of examination**
   Module exam:
   - Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)
   The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 15 students register, the examination will be an oral examination (duration: 30 min.). The type of examination will be announced in the beginning of the lecture.

5 **Prerequisite for the award of credit points**
   Passing the final module examination

6 **Grading**
   Module exam:
   - Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**
   MSc ETiT, BSc iST, MSc Wi-ETiT, BSc Informatik

8 **Grade bonus compliant to §25 (2)**
   Grade improvements up to 0.4 per APB 25 (2) due to bonus for regularly submitted homework tasks

1 Teaching content
The course deals with various development and research topics in the area of model-driven engineering and object-oriented software engineering. Besides a general overview, it provides a deep insight into a special scientific topic. The topics are selected according to the specific working areas of the participating researchers and convey technical and scientific competences in one or more of the following topics:

- Model-Driven Engineering and Model Synchronization
- Model Transformation
- Object-Oriented Refactorings
- Program Variability (Software Product Lines)
- Feature Model Analysis

2 Learning objectives
The student gains practical experience in development (reengineering and maintenance) of complex software systems. He/She learns to work and function in a team, and to analyze and solve a non-trivial task. Moreover, students exercise using theoretical knowledge in the group (e.g. from lectures like software engineering - introduction / Design / Maintenance & Quality Assurance) to solve a concrete and practical problem. Students that have successfully completed this seminar are able to independently organize and set-up a non-trivial software project and function to analyze and solve a certain task. Attendees gain the following skills in detail:

- realistic time and resource management (project management)
- experience with tools for version control and change management
- usage of CASE tools for model-based software development
- planning and execution of quality assurance measures

3 Recommended prerequisites for participation
Basic software technology knowledge and advanced knowledge of object-oriented programming languages

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
BSc ETiT, MSc ETiT, BSc iST

8 Grade bonus compliant to §25 (2)

**Module owner**
Prof. Dr. phil. nat. Marc Fischlin

## 1 Teaching content
- Structure of compilers
- Context-free grammars for the description of language syntax
- Lexing and parsing techniques
- Intermediate representations
- Semantic analysis
- Run-time organisation
- Code generation
- Software tools for compiler constructions
- Implementation techniques for compilers

## 2 Learning objectives
After successfully attending the course, students are familiar with the structure of compilers. They understand formal concepts for the description of syntax and semantics of programming languages. They can combine these concepts with algorithmic techniques to independently construct a compiler that maps a specified programming language to a given target machine. They know software tools supporting the construction of compilers and can apply these together with manual techniques to implement the compilers.

## 3 Recommended prerequisites for participation
Recommended:
Participation of lecture “Algorithmen und Datenstrukturen”, “Funktionale und objektorientierte Programmierung” and “Rechnerorganisation”, respectively according knowledge.

## 4 Form of examination
Course related exam:
- [20-00-0904-iv] (Study achievement, Oral/written examination, Default RS)

## 5 Prerequisite for the award of credit points
Pass exam (100%)
Course achievement may be acquired through exercises, hands-on training, programming and successful discussion on colloquiums. Each area must be passed.

## 6 Grading
Course related exam:
- [20-00-0904-iv] (Study achievement, Oral/written examination, Weighting: 100 %)

## 7 Usability of the module
B.Sc. Informatik
B.Sc. Informationssystemtechnik
May be used in other degree programs.

## 8 Grade bonus compliant to §25 (2)

---

1 **Teaching content**

**Content and goals**

- Elaboration of a technical topic in cooperation with a research associate as supervisor
- Detailed study of technical articles
- Deeper understanding of the technical topic treated therein
- Practical experience with technical documentation
- Learning modern presentation techniques and their application
- Presentation and discussion of the technical topic in front of a group of people

2 **Learning objectives**

The students are able to assess the reliability of information sources, comprehend and analyze scientific texts, present technical facts in an orderly manner and present them in a structured manner. Using the example of an original work, they can correctly summarize it in writing and refer to its contents.

3 **Recommended prerequisites for participation**

4 **Form of examination**

Module exam:

- Module exam (Study achievement, Oral/written examination, Default RS)

Report and/or term paper and/or presentation (in preparation for the thesis). The type of examination will be announced at the beginning of the course.

5 **Prerequisite for the award of credit points**

Passing the final module examination

6 **Grading**

Module exam:

- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**

1 Teaching content
C++ offers one of the most advanced threading interfaces available today. Using this interface as an example, the course teaches how to develop parallel software for shared memory with threads.

- Shared memory architectures
- Managing threads
- Sharing data between threads
- Synchronizing concurrent operations
- Designing lock-based concurrent data structures
- Designing programs for concurrency
- Testing and debugging

2 Learning objectives
Skill of developing parallel programs
- Systematically develop correct and efficient multithreaded programs
- Design and implement parallel data structures

3 Recommended prerequisites for participation
- Knowledge of C/C++

4 Form of examination
Course related exam:
- [20-00-0953-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

Students which passed 20-00-0801 aren't allowed in this lecture.

6 Grading
Course related exam:
- [20-00-0953-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

1 Teaching content
- Compilation and run-time environment for object-oriented programming languages
- Control flow graphs as intermediate representations
- Static dataflow analysis
- Static single-assignment form
- Eliminating total and partial redundancy
- Scalar optimization
- Register allocation
- Scheduling
- Loop optimization
- Structure and organization of real compilers (e.g., phases, intermediate representations, compile flow)

2 Learning objectives
After successfully attending the course, students understand techniques for the compilation and execution of object-oriented programs at the machine-level. They can apply static dataflow analysis to control flow graphs and are practiced using their SSA form. They are familiar with optimizing techniques for a number of problems as well as fundamental algorithms for register allocation. They know the internal structure of real production-grade compilers.

3 Recommended prerequisites for participation
Successfull participation of “Einführung in den Compilerbau”

4 Form of examination
Course related exam:

Module owner Prof. Dr. rer. nat. Andreas Schürr

1 Teaching content
During this module students gain practical experience in software development for embedded systems in the field of autonomous driving using a model car. In teamwork, they learn to cope with an extensive task. In order to solve this task they practice to use the theoretical knowledge available in the group (from other courses such as real-time systems, software engineering - introduction, C++ lab, digital control systems).

- Hands-on programming experience with C++ in the development of embedded software systems for autonomous driving based on a model car
- Application of control methods from the area of autonomous driving
- Application of software engineering techniques (design, documentation, test, ...) of a non-trivial embedded software system with hard real-time requirements and limited resources (memory, ...)
- Use of a given software framework and further libraries including a modular (real-time) operating system
- Hands-on experience using source code management systems, time management and other project management tools
- Presentations of the project results

2 Learning objectives
Students that have successfully participated in this module are able to organize and set-up a non-trivial software project in an interdisciplinary team according to a given problem independently. The participants acquire the following skills in detail:

- Independent familiarization with a given software framework and ready-made libraries
- Transfer of theoretic knowledge into a software system
- Extensive use of tools for version, configuration, and change management
- Realistic time and resource management (project management)
- Development of hardware/software systems with C++ considering important limitations of embedded systems
- Planning and implementation of extensive quality assurance measures
- Collaboration and communication in and between teams

3 Recommended prerequisites for participation
- ETiT/DT, iST, Informatik, WI-ET/DT: Basic software technology knowledge and advanced knowledge of object-oriented programming languages (especially C++)

Additionally desired:
- Basic knowledge of the development of real-time systems or image processing
- ETiT/AUT, MEC: Basic knowledge in control engineering including state space control design, some additional basic knowledge in digital control design may be helpful

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral examination, Duration: 30 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading

Prof. Dr. rer. nat. Andreas Schürr

1 Teaching content

- Further development and optimization of a robust C++ framework for solving non-trivial problems in the field of autonomous driving based on realistic challenges from the Carolo Cup, an international student competition for autonomous model cars
- Development and implementation of different algorithms (e.g., for motion planning, image processing, control, and obstacle avoidance) in an embedded system with hard real-time requirements and limited resources (memory, ...)
- Application and further development of control methods in the field of autonomous driving
- Application of software engineering techniques (design, documentation, testing, ...) for solving the problem
- Using source code management systems, time management and other project management tools
- Presentations of the project results

2 Learning objectives
Students learn to independently develop, implement and present new concepts and algorithms in the field of autonomous driving. Realistic problems from the Carolo Cup are solved with existing knowledge and skills practically and the implementation is ensured by quality assurance measures.

Students who have successfully participated in this project seminar are able to independently analyze and solve a complex and realistic task in the field of autonomous driving. The participants acquire the following skills in detail:

- Further development and optimization of an existing software system and the used algorithms independently
- Solving and implementation of non-trivial, realistic control engineering challenges
- Extensive use of tools for version, configuration, change, and quality assurance management
- Realistic time planning and resource allocation (project management)
- Further development and optimization of complex hardware/software systems under realistic environmental conditions
- Planning and implementation of extensive quality assurance measures
- Collaboration, communication and organization within the team

3 Recommended prerequisites for participation
Previous participation in the project seminar "Autonomous Driving I" or course with similar content.

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral examination, Duration: 30 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

1 Teaching content
C++ offers one of the most modern threading interfaces available today. Using this interface as an example, the course teaches advanced techniques to develop parallel software for shared memory with threads.

Based on the contents of the course Multithreading in C++, this course will cover the following topics:

• C++ memory model and atomic operations
• Designing lock-free concurrent data structures
• Advanced thread management (e.g., thread pools)

2 Learning objectives
After successfully completing the course, the students have advanced skills of developing parallel programs. They are able to:
- Systematically develop correct and efficient multithreaded programs
- Design and implement parallel data structures

3 Recommended prerequisites for participation
• Knowledge of C/C++
• Foundations of programming threads in C++ (lock-based synchronization and lock-based concurrent data structures)

4 Form of examination
Course related exam:

• [20-00-0977-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

Students who passed Modul "Fortgeschrittene parallele Programmierung 2" (FP PROG2), 20-00-0938 aren't allowed to pass this Modul.

6 Grading
Course related exam:

• [20-00-0977-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

8 Grade bonus compliant to §25 (2)

Prof. Dr. rer. nat. Andreas Schürr

1 Teaching content
In this course, the students produce scientific reports from changing subject areas. Each student has to explore a subject related to IT system development and produce a written report as well as a final talk with a presentation.

2 Learning objectives
Upon successful completion of the module, the students will be able to assess the reliability of information sources and explore an unknown topic under scientific aspects. The students learn to support the exploration by a literature research and to analyze the subject critically. They achieve the skills to present a definite subject in a written report as well as in an oral presentation.

3 Recommended prerequisites for participation
Basic knowledge in software engineering and programming languages

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS) Report and/or Presentation and/or Colloquium. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
BSc iST, BSc Informatik, MSc ETiT

8 Grade bonus compliant to §25 (2)

**1 Teaching content**
Students with basic programming experience will get an introduction to computational programming of numerical algorithms in C++. The first half of this course will focus on basics of the programming language C++, and highlight aspects in which the language differs from scripting languages such as Python or Matlab. Subsequently, the focus of the course will be on efficient memory management: We discuss modern best practices such as the usage of reference types and idioms like RAII ("Resource Acquisition is Initialization") rather than classical pointers ("Raw-Pointers"). During the exercises, we illustrate the effect of memory handling for numerical linear algebra applications, and introduce STL (Standard Template Library) data structures in this context.

In the second half of the lecture, the students implement more complex algorithms from different application areas using the "Eigen" library (for linear algebra) and openMP (for parallel computing). Here, the focus lies on understanding both libraries, improving the students' programming level from the first lecture half, and solving programming tasks from different areas such as stochastics, numerical solution of differential equations, and approximations.

**2 Learning objectives**
Students will obtain a basic understanding for the implementation of numerical algorithms in C++ including:

- Basics of C++ (Syntax, development environments, compilation, …)
- Differences to Python / Matlab (types, classes, pointers, references, …)
- Data types for numerical application (e.g. float, double, Unum/Posit, HDF, …)
- Modern C++ (Templates, RAII, Lambdas, …) according to standard >= 11
- Working with CMake and Git
- Data types of STL and "Eigen", and the development of numerical software on their basis
- Memory management, performance benchmarks, parallelization with openMP

**3 Recommended prerequisites for participation**
- Essentials of programming in Python / Matlab
- Mathematik I - IV, in particular: Linear algebra, numerical solution of systems of linear equations, interpolation problems, numerics of ordinary differential equations

**4 Form of examination**
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS) The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 30 students register, the examination will be an oral examination (duration: 25 min.). The type of examination will be announced in the beginning of the lecture.

**5 Prerequisite for the award of credit points**
Passing the final module examination

**6 Grading**
Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

**7 Usability of the module**
MSc etit, MSc CE; BSc/MSc WI-etit, BSc/MSc iST
### Grade bonus compliant to §25 (2)
Yes. An earned bonus is creditable until the exercises are offered again.

### References
Will be handed out during the lecture and is provided via Moodle.

Prof. Dr.-Ing. Ermira Mezini

1 Teaching content
Fundamental concepts of programming languages. In particular, we identify various basic concepts of programming languages and discuss them in detail, for example:
- role of syntax
- functions
- meta-interpreters
- recursion
- lazy evaluation
- state and side effects
- continuations
- domain-specific languages and macros
- object-oriented programming

2 Learning objectives
After the successful completion of the lecture, students will be able to perform the following tasks:
- they will be able to identify the defining features of programming languages;
- they will be familiar with fundamental theoretical concepts of programming languages;
- they will be able to implement simple programming languages using different implementation techniques;
- students will understand the influence of different programming languages on the solution space of various software development problems;
- students will be able to overcome stereotypical categorizations of programming languages.

3 Recommended prerequisites for participation
Recommended: Funktionale und Objektorientierte Programmierkonzepte

4 Form of examination
Course related exam:
- [20-00-0072-iv] (Technical examination, Oral/written examination, Default RS)

The form of the examination will be announced at the beginning of the course. One or a combination of max. two of the following forms is possible.

Written exam (duration 60 or 90 or 120 minutes), oral exam (duration 15 or 30 minutes), homework (optional: including tests).

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:
- [20-00-0072-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

### 1 Teaching content
Independently implement a compiler or extend an existing compile flow (e.g., realize new optimization passes or back-ends).

### 2 Learning objectives
After successfully completing the labs, students are able to independently implement core parts of a modern compiler, either from scratch or integrating them into an existing compiler framework. In this process, they can apply and improve their knowledge both of compiler technology (e.g., use of different intermediate representations), as well as of general implementation techniques (e.g., applying design patterns).

### 3 Recommended prerequisites for participation
Recommended:
Participation of lecture „Rechnerorganisation“, „Einführung in den Compilerbau“ and „Fortgeschrittener Compilerbau“, respectively according knowledge.

### 4 Form of examination
Course related exam:
- [20-00-0911-pr] (Study achievement, Oral/written examination, Default RS)

### 5 Prerequisite for the award of credit points
Pass exam (100%)  

### 6 Grading
Course related exam:
- [20-00-0911-pr] (Study achievement, Oral/written examination, Weighting: 100 %)

### 7 Usability of the module

Module name
Modeling, Specification and Semantics

Module nr. 20-00-0013
Credit points 5 CP
Workload 150 h
Self-study 105 h
Module duration 1 Term
Module cycle Winter term

Language German
Module owner Prof. Dr. phil. nat. Marc Fischlin

1 Teaching content
- Models and their significance for Computer Science
- Introduction to discrete modeling using mathematical logic and algebraic concepts
- Interpretation and faithfulness of formal models
- Abstraction, refinement, composition, and decomposition of models
- Systematic construction of models and deliberate design decisions
- Syntax and operational semantics of programming languages
- Introduction to specification languages
- Syntax and denotational semantics of formal specification languages
- Elementary proof techniques and their use
- Modeling of systems and of requirements
- Modeling of coordination and communication in concurrent systems

2 Learning objectives
After successfully completing this module, students know basic concepts and methods of modeling, specification, and semantics. They are able to use predicate logic and algebraic concepts to formalize informally described scenarios and to assess the faithfulness of formal system models. They are able to develop discrete models in a systematic fashion, to make necessary design decisions, and to employ informal notation and graphics to facilitate the construction of formal models. They know selected formal specification languages and are able to use at least one such language. They understand the distinction between the syntax and semantics of formal languages, and they are able to prove propositions about concrete programs and specifications as well as simple meta-properties about programming and specification languages. They are able to formalize basic system requirements and can assess the faithfulness of such formalizations.

3 Recommended prerequisites for participation
Recommended:
Participation of lecture “Automaten, formale Sprachen und Entscheidbarkeit” and “Aussagen- und Prädikatenlogik”, respective according knowledge.

4 Form of examination
Course related exam:
- [20-00-0013-iv] (Technical examination, Oral/written examination, Default RS)
  Written Exam (90 min.)

5 Prerequisite for the award of credit points
Pass exam (100%)

1 Teaching content
Data-driven artificial intelligence (AI) solutions are being adopted in many areas, including finance, medicine, cognitive sciences, and biology. Such machine learning (ML) approaches require an accurate domain and requirement analysis, proper software design and development, dedicated testing and debugging, as well as specific techniques that ensure scalability and maintainability. While AI-enabled systems continue to have a tremendous impact on many fields, developers and data scientists still follow methods (scripting, informal/non-written specifications, trial-and-error testing) that do not conform to the state of the art of engineering disciplines. In this context, it is of paramount importance to take advantage of the decades-long developments of software engineering (SE) to systematize the development process of ML solutions.

In this course, each student will be assigned a topic regarding SE for AI. Based on provided resources and personal extending research, each student prepares a presentation with following discussion. These will be conducted in regular appointments. The students not presenting at a particular date, prepare via introductory reading for the respective discussion. Grading will be based on the preparation of the assigned topic and its presentation, as well as on the participation in all the discussions.

For more information and announcements, please consult the course webpage: https://allprojects.github.io/SE4AI/

2 Learning objectives
After successful completion of the module students will have developed a deeper understanding of software engineering for artificial intelligence. This includes the key topics requirements engineering, quality assurance, development processes, and software architecture and design accounting for modularity, reusability, efficiency, scalability, fairness and privacy.

The students learn the preparation and the presentation of scientific contents for an audience with heterogeneous background knowledge. Moreover, students train efficient preparation of and active participation in scientific discussions as well as their moderation.

3 Recommended prerequisites for participation
Recommended: Basic knowledge of software engineering. Interest in artificial intelligence.

4 Form of examination
Course related exam:
• [20-00-1097-se] (Study achievement, Oral/written examination, Default RS)

The form of the examination will be announced at the beginning of the course. One or a combination of max. two of the following forms is possible:
Colloquium (optional: including presentation).

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading

1 Teaching content
- operational semantics for sequential and parallel programs
- overview of techniques for static and dynamic program analysis
- abstract interpretation
- data flow analysis
- slicing techniques
- type-based program analysis
- concepts of runtime monitoring
- techniques for implementing runtime monitoring
- language-based security
- soundness and precision of program analysis

2 Learning objectives
After successfully participating in this course the students will know a range of different program analyses. The students will understand the functionality of each program analysis and the difference between each of the considered program analyses. Furthermore, the students will be able to judge which program analysis is suitable for a specific problem, and they will be able to apply the different program analyses. The students will also be able to judge the precision and soundness of program analyses. Finally, the students will be able to implement and define the considered program analyses and variants of them.

3 Recommended prerequisites for participation
Knowledge of Computer Science and Mathematics equivalent to the first four semesters in the Computer Science Bachelor program, in particular basic knowledge about logic and the ability to understand formal calculi.

1 Teaching content
Participants independently solve alone or in a small group an individually a given problem. The problems are usually programming projects inspired by the research performed at the Data Management Lab.

Possible areas are:
- Scalable Databases & Modern Hardware
- Cloud Databases & Blockchains
- Interactive Data and Text Exploration
- Natural Language Interfaces for Databases
- Scalable Systems for Machine Learning

In this lab the students will realise a project defined by their advisor. Compared to the "Data Management - Lab", the “Data Management - Extended Lab” requires more effort.

2 Learning objectives
After completion of this course the students are able to
- Understand state-of-the-art techniques in modern data management systems
- Apply and implement techniques in individual projects
- Provide experimental evidence for design decisions with benchmarks and/or real workloads

3 Recommended prerequisites for participation
Depending on selected topic.

---

1. **Teaching content**
   This course introduces the fundamental concepts and computational paradigms of scalable data management systems. The focus of this course is on the systems-oriented aspects and internals of such systems for storing, updating, querying, and analyzing large datasets.

   Topics include:
   - Database Architectures
   - Parallel and Distributed Databases
   - Data Warehousing
   - MapReduce and Hadoop
   - Spark and its Ecosystem
   - Optional: NoSQL Databases, Stream Processing, Graph Databases, Scalable Machine Learning

2. **Learning objectives**
   After the course the student will have a good overview of the different concepts, algorithms, and systems aspects of scalable data management. The main goal is that the students will know how to design and implement such systems including hands-on experience with state-of-the-art systems such as Spark.

3. **Recommended prerequisites for participation**
   Programming in C++ and Java
   Informationsmanagement (20-00-0015-iv)
   Optional:
   Foundations of Distributed Systems (20-00-0998-iv)

4. **Form of examination**
   Course related exam:
   - [20-00-1017-iv] (Technical examination, Oral/written examination, Default RS)

5. **Prerequisite for the award of credit points**
   Pass exam (100%)

6. **Grading**
   Course related exam:
   - [20-00-1017-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7. **Usability of the module**
   B.Sc. Informatik
   M.Sc. Informatik
   May be used in other degree programs.

8. **Grade bonus compliant to §25 (2)**

9. **References**

Prof. Dr. techn. Johannes Fürnkranz

Teaching content
This is an advanced course about the design of modern data management systems which has a heavy emphasis on system design and internals. Sample topics include modern hardware for data management, main memory optimisations, parallel and approximate query processing, etc.

The course expects the reading of research papers (SIGMOD, VLDB, etc.) for each class. Programming projects will implement concepts discussed in selected papers. The final grade will be based on the results of the programming projects. There will be no final exam.

Learning objectives
Upon successful completion of this course, the student should be able to:
- Understand state-of-the-art techniques for modern data management systems
- Discuss design decision of modern data management systems with emphasis on constructive improvements
- Implement advanced data management techniques and provide experimental evidence for design decisions

Recommended prerequisites for participation
Solid Programming skills in C and C++
Scalable Data Management (20-00-1017-iv)
Information Management (20-00-0015-iv)

Form of examination
Course related exam:
• [20-00-1039-iv] (Technical examination, Oral/written examination, Default RS)

Prerequisite for the award of credit points
Pass exam (100%)

Grading
Course related exam:
• [20-00-1039-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

Usability of the module
B.Sc. Informatik
M.Sc. Informatik
May be used in other degree programs.

Grade bonus compliant to §25 (2)

1 Teaching content
Description and classification of dynamic systems; Linearization around an equilibrium point; Stability of dynamic systems; Frequency response; Linear time-invariant closed-loop systems; Controller design; Control structure optimization

2 Learning objectives
Students will know how to describe and classify different dynamic systems. They will be able to analyse the dynamic behaviour in time and frequency domain. The students will be able to design controllers for linear time invariant systems.

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module

Language: German
Module owner: Prof. Dr.-Ing. Peter Stephan

1 Teaching content
Fundamental terms of thermodynamics; thermodynamic equilibrium and temperature; different forms of energy (internal energy, heat, work, enthalpy); properties and equations of state for gases and incompressible substances; first law of thermodynamics and energy balances for technical systems; second law of thermodynamics and entropy balances for technical systems; exergy analysis; thermodynamic behaviour during phase change; the Carnot cycle for power generation or refrigeration; energy efficiency and coefficient of performance; cyclic processes for gas turbines, combustion engines, power plants, refrigerators and heat pumps.

2 Learning objectives
On successful completion of this module, students should be able to:
1. Explain the relationships between thermodynamic properties and the thermodynamic state of a system and apply them within calculations of thermal system behaviour.
2. Distinguish between different types of energy (e.g. work, heat, internal energy, enthalpy) and define them.
3. Analyse technical systems and processes using energy balances and equations of state.
4. Assess energy conversion processes by means of an entropy balance or an exergy analysis.
5. Characterise the thermal behaviour of gases, liquids and solids and corresponding phase change processes.
6. Apply this basic knowledge (1.-5.) to examine machines (turbines, pumps etc.) and processes for energy conversion (combustion engine, power plants, refrigerators, heat pumps).

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 150 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the examination

6 Grading
Module exam:

1. **Teaching content**
   Layout and function of vehicle components (e.g. engine, transmission, chassis, tires, breaks, steering); driving resistance & performance; safety; aerodynamics and automotive computing.

2. **Learning objectives**
   On successful completion of this module, students should be able to:
   1. Calculate the factors that influence fuel consumption and discuss the strategies to reduce fuel consumption.
   2. Derive upper bounds for combustion engine efficiencies and discuss the future opportunities & challenges of electromobility.
   3. Explain the basic requirements, working principles, and basic structure of the drivetrain, powertrain, and chassis assemblies (including tires, wheels, brakes, steering, springs, dampers and axles).
   4. Name and explain the methods to increase safety in individual traffic.
   5. Explain the effects of aerodynamic measures on driving dynamics and fuel consumption.

3. **Recommended prerequisites for participation**
   Basic knowledge of technical mechanics (force diagram, equations of motion) and basic knowledge of thermodynamics recommended.

4. **Form of examination**
   Module exam:
   - Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5. **Prerequisite for the award of credit points**
   Passing the examination

6. **Grading**

Prof. Dr.-Ing. Rolf Findeisen

1 Teaching content
Using appropriate test benches the students apply controller design methods taught in the basic lecture of control systems. The priority hereby lies in the application of the design methods and the evaluation of the parameters they provide. Additionally, some further topics of the domain of control systems (e.g. automation engineering, data-driven modelling) are presented by practical Experiments.

2 Learning objectives
After completion of this module the students will be able to practically apply the modelling and design techniques for different dynamic systems presented in the module "System dynamics and control systems I" to real lab experiments and to bring them into operation at the lab setup.

3 Recommended prerequisites for participation
System Dynamics and Control Systems I

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, p/np RS)
Report (including submission of programming code) and/or Presentation and/or Oral examination (25 minutes) and/or Colloquium (testate), but never more than two out of it. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
BSc ETIT

8 Grade bonus compliant to §25 (2)

9 References
Lab handouts will be given to students.

1. **Teaching content**
   In this lab tutorial, an introduction to the software tool MatLab/Simulink will be given. The lab is split into two parts. First, the fundamentals of programming in Matlab are introduced and their application to different problems is trained. In addition, an introduction to the Control System Toolbox will be given. In the second part, the knowledge gained in the first part is applied to solve a control engineering specific problem with the software tools.

2. **Learning objectives**
   Fundamentals in the handling of Matlab/Simulink and the application to control engineering tasks.

3. **Recommended prerequisites for participation**
The lab should be attended in parallel or after the lecture “System Dynamics and Control Systems I”

4. **Form of examination**
   Module exam:
   - Module exam (Study achievement, Oral/written examination, Default RS)

5. **Prerequisite for the award of credit points**
   Passing the final module examination

6. **Grading**
   Module exam:
   - Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7. **Usability of the module**
   BSc ETiT; BSc MEC

8. **Grade bonus compliant to §25 (2)**
   In case of E-Learning: Possibility to improve the grade up to 1,0

9. **References**

1 Teaching content
Longitudinal and lateral dynamics; vehicle dynamics control; handling & comfort; suspension & body control; testing & calibration

2 Learning objectives
On successful completion of this module, students should be able to:
1. Derive vehicle longitudinal dynamics from driving and frictional conditions as well as from the design.
2. Employ the basic equations of lateral dynamics with the fundamental motion and force dimensions of the single-track model and describe and assess vehicle behaviour at steady state skidpad testing as well as at load changes during curve-driving.
3. Discuss measures which influence a vehicle's self-steering properties. Discuss measures to influence self-steering behavior
4. Explain the transmission of lateral forces between the road and tyre and discuss the interaction between longitudinal and lateral forces.
5. Explain the principal ESP estimation and control processes incl. their meaning regarding to vehicle dynamics control.
6. Discuss challenges as well as opportunities for driving dynamics of battery electric vehicles.
7. List steady and unsteady state road trials for handling and assessment and refer to results of road trials for making conclusions about handling characteristics.

3 Recommended prerequisites for participation
Fundamentals of automotive engineering, basic knowledge of technical mechanics (force diagram, equations of motion), basic knowledge of thermodynamics, basic knowledge of vibrations recommended

4 Form of examination
Module exam:
• Module exam (Technical examination, Oral/written examination, Default RS)
Written Exam 90 min or oral Exam 45 min

5 Prerequisite for the award of credit points
Passing the examination

1 Teaching content
This (usually virtually offered) "European Lecture" covers development trends in the global automotive industry and current research topics of vehicle technology institutes in unite!: system and function development in advanced driving assistance systems or automated driving systems, sustainable powertrain technology, etc.

2 Learning objectives
On successful completion of this module, students should be able to:
1. Report and discuss about present and forward-looking technologies in the fields of driver assistance systems and automated driving technology as well as sustainable powertrain solutions.
2. Explain current developments.
3. Evaluate possibilities and limitations of distinct approaches.

3 Recommended prerequisites for participation
Fundamentals of automotive engineering recommended

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Default RS)
Written exam 90 min or oral exam 30 min.

5 Prerequisite for the award of credit points
Passing the examination.

6 Grading

1. **Teaching content**
   Current research topic from the general area of the administering institute.

2. **Learning objectives**
The students become acquainted with teamwork and are able to take over responsibility for leading tasks within the team. They learn to assess divergent positions and the necessity of common agreements in interpersonal relationships as well as typical engineering challenges in a positive manner. They are able to recognize and specify complex problems and to distinguish between different solutions. They also study how to valuate the importance of an exact time and work schedule positively.

3. **Recommended prerequisites for participation**
Possible prerequisites will be prescribed by the individual institute supervising the project.

4. **Form of examination**
   Module exam:
   - Module exam (Technical examination, Special form, Default RS)

5. **Prerequisite for the award of credit points**
   Passing the final module examination

1. **Teaching content**
   Operational requirements for flight guidance systems, structure of flight guidance systems, architectures and design of safe systems, pilot assistance systems in the cockpit, human factors.

2. **Learning objectives**
   On successful completion of this module, students should be able to:
   1. Describe the basics of automated flight operations and human-machine interfaces in modern aircraft flight decks.
   2. Explain the basic concepts and methods in the design of safety critical systems in flight control.
   3. Differentiate between the different system architecture concepts.
   4. Describe and discuss the complex interplay of technical systems, operational processes and humans using the example of avionics systems.

3. **Recommended prerequisites for participation**

4. **Form of examination**
   Module exam:
   - Module exam (Technical examination, Oral/written examination, Default RS)
   Written exam 60 min or oral exam 20 min

5. **Prerequisite for the award of credit points**
   Passing the examination

6. **Grading**
   Module exam:
   - Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

## Teaching content

Introduction: Historic review, economic and ecological aspects, classification of engines.
Fundamentals of the thermodynamic process: Carnot cycle, constant-volume cycle, constant-pressure cycle, Seiliger cycle.
Fundamentals of engine construction: Crank shaft, con-rod, bearing, piston, piston rings, piston pin, liner, cylinder head gasket, cylinder head, charge cycle.
Parameters: Mean pressure, power, torque, fuel consumption, efficiency, cylinder charge, air fuel ratio, kinematics of the crank mechanism, compression ratio, characteristic diagrams, main dimensions.
Fuel: Chemical configuration, characteristics, heat value, characteristics of ignition, production, alternative fuels.
Basics of carburation: Spark-ignition engines, diesel engines, spreading, conditioning.
Carburation of spark-ignition engines: Carburator, electronic fuel injection, HCCI (Homogeneous Charge Compression Ignition).
Ignition of spark-ignition engines: Requirements, spark plug, ignition systems, magnetic systems, knock control systems. Mixture formation of diesel engines: basics, classification of different methods, mixture distribution and mixture formation, injection systems.

## Learning objectives

On successful completion of this module, students should be able to:

1. Explain the principles and the construction of combustion engines (ranging from small two-stroke models to the marine diesel engine).
2. Explain the physical principles of combustion engines.
3. Develop the essential parameters and apply these to characterise engines.
4. Explain the economic and ecological relevance of combustion engines.
5. Apply the thermodynamic basics of combustion engines to develop new drive concepts.
6. Describe the basics of the engine construction.
7. Analyse and evaluate the interdependency of fuel, mixture formation, and combustion.
8. Explain the difference by mixture formation and ignition process of spark ignited engines and diesel engines.
9. Explain the ignition and ignition systems of the spark ignited engine.

## Recommended prerequisites for participation

## Form of examination

Module exam:

- Module exam (Technical examination, Oral/written examination, Default RS)

Written or oral exam [written: 90 min; oral: 90 min (per group with 4 people 22.5 min per participant)].
Will be announced at the beginning of the term depending on the circumstances (number of students, pandemic etc.).

## Prerequisite for the award of credit points

Passing the examination

## Grading

Module exam:

- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

## Usability of the module
### WP Bachelor MB
Bachelor Mechatronik

### Language
German

### Module owner
Prof. Dr.-Ing. Steven Peters

### Teaching content
Sensors for advanced driver assistance systems (ultrasonic, radar, lidar, camera, ...); longitudinal control assistance; lateral control assistance; active collision protection systems; navigation; automated driving (AI and safety)

### Learning objectives
On successful completion of this module, students should be able to:
1. Indicate special difficulties at recognising the vehicle's surrounding field and describe the consequences of these difficulties for the system utilisation.
2. Explain the effect chain of the sensors from detection over perception up to surrounding field representation for ultrasonic, radar, lidar, and video.
3. Describe the basic functions and the function limits of automatically acting driver assistance systems and collision mitigation systems.
4. Evaluate the benefits and modes of action of vehicle safety systems and illustrate the course of an accident and describe a crash test.
5. Illustrate the function of the modules necessary in the vehicle for navigation.
6. Depict challenges of automated driving in passenger cars and trucks and discuss risk minimal introduction paths.

### Recommended prerequisites for participation
Fundamentals of automotive engineering recommended

### Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Default RS)

Written exam 90 min or oral exam 45 min

### Prerequisite for the award of credit points
Passing the examination

1 **Teaching content**
The Automotive Engineering Tutorium deepens special topics from the courses Motor Vehicles I+II on the basis of practically performed experiments. The selection of the experiments follows the availability of testing vehicles or current problems.

2 **Learning objectives**
You are able to make independent experiments with vehicles for a given problem. This comprises the definition of test procedures and measuring devices. Test parameters are defined and varied. You are able to make use of the theoretical knowledge from Motor Vehicles I and II.

3 **Recommended prerequisites for participation**
Fundamentals of automotive engineering

4 **Form of examination**
Module exam:
- Module exam (Technical examination, Special form, Default RS)

5 **Prerequisite for the award of credit points**
Passing the final module examination

Prof. Dr.-Ing. Tran Quoc Khanh

1 Teaching content
History and standardisation of car lighting. Description of the used lighting sources and the function of these (lowbeam, highbeam, bending light, stop lamp, daytime running light...), visual perception, glare, detection, traffic infrastructure, traffic elements, interior lighting, driver assistance systems (GPS, Radar, Lidar...), methods of psychophysics, lighting application concepts in future automated vehicles.
Voluntary trip planned to an automobile manufacturer

2 Learning objectives
Upon completion of the module, students will have learned to describe the basics and deepening knowledge of car lighting, to understand the light distribution of head and rear lamps, to learn the basics of standardisation, enlarge glare and detection skills, know the traffic elements, as well as the driver assistance systems.

3 Recommended prerequisites for participation
Lighting technology 1

4 Form of examination
Module exam:

Module owner
Dr.-Ing. Nicklas Norrick

1 Teaching content
Statics: force, moment (torque), free body diagram, equilibrium equations, center of gravity, truss, beams, adhesion and friction.
Mechanics of elastic bodies: stress and deformation, tension, torsion, bending.
Kinematics: point and rigid body movement.
Kinetics: dynamic force and moment equilibrium equations, energy and work, linear oscillators, momentum and angular momentum conservation laws, impact.

2 Learning objectives
In this course the students will learn the basic concepts of technical mechanics. They should be able to analyze the statics of simple statically determinate planar systems, to carry out elementary elastomechanical calculations of statically determinate and statically indeterminate structures, to describe and analyze movements, and to solve planar motion problems, oscillation and shock phenomena with the laws of kinetics.

3 Recommended prerequisites for participation

1 **Teaching content**
The project seminar deals with the following subjects: automotive lighting, interior lighting, exterior lighting; generation, perception and cognition of the visual stimulus (luminaires, displays, projection); LED/OLED technology; physical and psychophysical light measurement; illuminating engineering, color perception.

2 **Learning objectives**
Upon completion of the module, students will be able to apply interdisciplinary thinking in lighting engineering independently in project teams or on their own.

3 **Recommended prerequisites for participation**
Lighting Technology I-II

4 **Form of examination**
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

#### 1 Teaching content
For the project seminar, a question from the following topics can be addressed: Automotive lighting technology, light for the automated car, interior and exterior lighting; Smart Lighting; Human Centric Lighting (HCL); plant lighting; generation, perception and cognition of the visual stimulus (luminaires, displays, projection); LED/OLED technology; physical and psychophysical light measurement technology; lighting technology, color perception, virtual reality tests for light simulations. The aim of this project seminar is the practical implementation of the material acquired in the course of study in the form of a project work. The fundamentals of the module and the project seminar "Lighting Applications" are applied and deepened.

#### 2 Learning objectives
Upon completion of the module, students will be able to plan, implement and validate lighting technology issues. In addition, they will have learned how to abstract questions, communicate information in a project-dependent manner, and present their results.

#### 3 Recommended prerequisites for participation
Lighting Technology I-II, Project seminar Applications of Lighting Engineering

#### 4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)

Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

#### 5 Prerequisite for the award of credit points
Passing the final module examination

1 Teaching content
For the project seminar a question from the following subject areas can be worked on: Automotive lighting, light for autonomous cars, interior lighting, exterior lighting; smart lighting; human centric lighting (HCL); horticulture lighting; generation, perception and cognition of visual stimuli (luminaires, displays, projection); LED/OLED technology; physical and psychophysical light measurement; illuminating engineering, color perception, virtual reality tests for light-simulation. The objective of this project seminar is the practical implementation of the knowledge acquired during the study in the form of research or project work in an interdisciplinary context, which also takes up topics beyond the lectures.

2 Learning objectives
Upon successful completion of the module, students have learned the approach, implementation and validation or investigation of interdisciplinary lighting issues. This requires an introduction into topics that go beyond the subject area of the lectures. Usually, this includes the selection of suitable illuminants, the development of electronic hardware, the use of photometric measuring instruments as well as the conception, execution and evaluation of studies. In addition, students learn to abstract questions, to develop research questions, to communicate information depending on the project, and to present and discuss results.

3 Recommended prerequisites for participation
Lighting Technology I-II, Project seminar Applications of Lighting Engineering

4 Form of examination
Module exam:
• Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

### 1 Teaching content
Electronic motor management: Configuration and structure, actuators and sensors, main functions, application, interfaces.

Ignition and combustion of hydrocarbons: Kinetic gas theory, internal combustion, correlation between in-cylinder pressure and heat release, efficiency, basics of the combustion (SI-engine / diesel-engine), abnormal combustion, combustion chamber shape and combustion processes.

Emissions: Components, corruptive effects, formation, influence of the operating point, internal motoric methods, aftertreatment, measuring systems, emission tests.

Charge cycle: Influence of the charge cycle on engine characteristics, systems, camshaft drivetrains, parameters of the charge cycle, variable valve timing, special solutions.

Charging: Characteristics and advantages of charging, different systems, design criterion for turbocharging, multi-stage charging, performed variants.

Noise: Basics, sources, measures against noise, regulations

Hybrid systems: Basics, functionalities, classification, components, challenges, research methods and certification, performed variants.

Acquisition and analysis of engine indication: Measurement chain, measurement of pressure and cylinder capacity, analysis, calculation of heat release, characteristic results

Design of experiments.

### 2 Learning objectives
On successful completion of this module, students should be able to:

1. Explain the different internal combustion engines and describe theoretically the processes.
2. Design combustion chambers with the knowledge acquired on the connection of combustion chamber shape, combustion processes, and ignition.
3. Define the emergence of emissions of engines (exhaust, noise) and describe the avoiding of emissions.
4. Describe the charge changing of a combustion engine, identify variants, and advance engines
5. Recognize the importance of charging and the variants.
6. Explain hybrid technology.
7. Reproduce specific measuring methods in the fields of optimizing engines (indication, design of experiments).

### 3 Recommended prerequisites for participation

### 4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Default RS)

Written (90 min) or oral exam (90 min, per group of 4 22.5 min per participant).

Will be announced at the beginning of the term depending on the circumstances (number of students, pandemic etc.).

### 5 Prerequisite for the award of credit points

1 Teaching content
Navigation principles, Earth models, Coordinate systems, Radio navigation, Basics and instruments (ADF, VOR, DME, ILS), dead reckoning, functional principles and error analysis, satellite navigation, Introduction into GPS, signal description and measurement principles, Dilution of Precision (DoP), Differential GPS, Augmentation systems (RAIM, GIC, WAAS, LAAS, EGNOS).

2 Learning objectives
On successful completion of this module, students should be able to:
1. Explain the physics associated with the navigation of the earth.
2. Classify common coordinate systems and map projections.
3. Judge the methods of radio, coupling, and satellite navigation with respect to performance and applications.

3 Recommended prerequisites for participation
Recommended: Control Engineering

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral examination, Duration: 20 Min., Default RS)
Oral exam (in a group with 3 students) 60 min: 20 min per participant

5 Prerequisite for the award of credit points

Module owner
Dr. Ing. Holger Krag

1 Teaching content
This lecture will provide the scientific, technical and operational background in relation to the sources, surveillance and mitigation of space debris.
This covers risk assessment aspects: source and sink terms, particle flux models, aerodynamics and aerothermal aspects during atmospheric re-entry and related on-ground risk assessments;
all major aspects of space surveillance: ground-based radar and telescope systems, orbit determination methods (batch least square, Levenberg-Marquardt, Kalmanfilter), residuals, covariances, operational collision avoidance;
As well as space debris mitigation aspects: long-term environment projection models, international guidelines, passivation methods, shielding concepts, methods for post mission disposal and verification of measures;

2 Learning objectives
On successful completion of this module, students should be able to:
1. name the sources of space debris and describe the human-made particle environment and the consequences of particle impacts;
2. analyse and determine the risks to a space mission due the natural and human-made particle environment and limit this risk by suitable technical measures;
3. determine the on-ground risk caused by the atmospheric re-entry of a space object;
4. lay-out a space mission according to applicable space debris mitigation guidelines and verify the resulting setup along with international standards;
5. perform the main tasks of flight dynamics in operations (orbit determination and manoeuvre-planning) and explain the operational processes in the context of collision avoidance;
6. Present the main technical aspects of space surveillance, lay-out the required sensor systems and apply the related computational methods;

3 Recommended prerequisites for participation
knowledge of the content of „Space Flight Mechanics” (module no. 16-25-5130) is an asset but not a pre-requisite.

4 Form of examination
Module exam:
• Module exam (Technical examination, Oral examination, Duration: 20 Min., Default RS)

1. **Teaching content**  
Students gain knowledge of advanced CA Methods through the analysis of recent industrial examples. This course builds on the basic course ‘Einführung in das rechnerunterstützte Konstruieren (CAD)’.

2. **Learning objectives**  
The students will be familiar with advanced CA Methods. They are able to recognise, execute and plan the generic workflow of CA Processes. Furthermore they are able to transfer their theoretical knowledge into industrial practice.

3. **Recommended prerequisites for participation**  
Einführung in das rechnergestützte Konstruieren (CAD)  
Virtuelle Produktentwicklung A, B, C

4. **Form of examination**  
Module exam:  
- Module exam (Technical examination, Special form, Default RS)

1 Teaching content

- History of Automated Driving
- Terminology and Paths towards Automated Driving
- Architectures, Building Blocks, and Components
- Perception & Environment Models
- Data Fusion & State Estimation
  - Deep Dive: Target Tracking & Traffic Participant Fusion
  - Deep Dive: Grid Fusion & Free Space Estimation
  - Deep Dive: Road Model Fusion
- Localization, Digital Maps, and Vehicle-To-X Communication
- Situation Understanding, Prediction, and Criticality Assessment
  - Deep Dive: Probabilistic Driving Maneuver Detection
- Behavior & Trajectory Planning, Decision Making
- Automated Driving Software Development & Test
- Open Challenges & State-of-the-Art Research Topics

2 Learning objectives

Upon successful completion of the module, students will be able to:

- is familiar with the history and terminology of automated driving systems,
- knows important architectures, building blocks, and components of automated vehicles,
- understands different perception, environment model, and data fusion approaches,
- has an idea about relevant methods (e.g. Bayesian Inference & Probabilistic Graphical Models, State Estimation, Deep Learning, Dempster-Shafer Theory) and knows how they can be beneficially applied in different of automated driving areas (e.g. detection, target tracking & traffic participant fusion, grid fusion, road model fusion, localization),
- is familiar with the challenges of situation understanding, prediction, and criticality assessment and knows exemplary methods to tackle the problem,
- is aware of exemplary behavior & trajectory planning approaches,
- knows best practices about automated driving software development & test (e.g. continuous integration, verification & validation, test-driven development, key performance indicators), and
- is familiar with open challenges and research topics.

3 Recommended prerequisites for participation

4 Form of examination

Module exam:
  - Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading
Module exam:
  • Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module
Msc etit, Msc MEC, Msc Wi-etit, Msc ICE, Msc CE, Msc Informatik

8 Grade bonus compliant to §25 (2)

1. **Teaching content**

Artificial Intelligence (AI) is concerned with algorithms for solving problems, whose solution is generally assumed to require intelligence. While research in the early days was oriented on results about human thinking, the field has since developed towards solutions that try to exploit the strengths of the computer. In the course of this lecture we will give a brief survey over key topics of this core discipline of computer science, with a particular focus on the topics search, planning, learning, and reasoning. Historical and philosophical foundations will also be considered.

- Foundations
- Introduction, History of AI (RN chapter 1)
- Intelligent Agents (RN chapter 2)
- Search
- Uninformed Search (RN chapters 3.1 - 3.4)
- Heuristic Search (RN chapters 3.5, 3.6)
- Local Search (RN chapter 4)
- Constraint Satisfaction Problems (RN chapter 6)
- Games: Adversarial Search (RN chapter 5)
- Planning
- Planning in State Space (RN chapter 10)
- Planning in Plan Space (RN chapter 11)
- Decisions under Uncertainty
- Uncertainty and Probabilities (RN chapter 13)
- Bayesian Networks (RN chapter 14)
- Decision Making (RN chapter 16)
- Machine Learning
- Neural Networks (RN chapters 18.1,18.2,18.7)
- Reinforcement Learning (RN chapter 21)
- Philosophical Foundations

2. **Learning objectives**

After a successful completion of this module, students are in a position to

- understand and explain fundamental techniques of artificial intelligence
- participate in a discussion about the possibility of an artificial intelligence with well-founded arguments
- critically judge new developments in this area

3. **Recommended prerequisites for participation**

4. **Form of examination**

Course related exam:

- [20-00-1058-iv] (Technical examination, Oral/written examination, Default RS)
- Written Exam (90 min.)

5. **Prerequisite for the award of credit points**

Pass exam (100%)
6 **Grading**

Course related exam:

- [20-00-1058-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**

B.Sc. Informatik

M.Sc. Informatik

M.Sc. Autonome Systeme und Robotik

M.Sc. Artificial Intelligence and Machine Learning

May be used in other degree programs.

8 **Grade bonus compliant to §25 (2)**

1. Teaching content
Study Content
Basic concepts of information management:
Structured and unstructured data (text) as important data sources.
Relevance of information management (operational information systems)
Overview of data science and its subfields

Part 1: Structured data / databases
Data Modeling:
Conceptual data models (ER / UML structure diagrams)
Conceptual design
Logical data model (relational model)
Mapping from conceptual to logical model

Relational query languages:
SQL (in detail)
Relational Algebra

Database theory:
Functional dependencies
Design theory and normalization

Implementation of database systems:
Physical data storage
Query processing and optimization
Transaction processing

Current trends in databases:
Main-memory databases & Column-based data storage
NoSQL databases
Big Data Systems

Part 2: Unstructured Data / Text Processing
Basics of unstructured data:
Storage and encoding of unstructured text
Creating and annotating text corpora
Lexical resources and knowledge bases

Natural Language Processing:
Segmentation
Syntactic and semantic analysis

Other Applications for unstructured data:
Information Retrieval
Information Extraction

Advanced Topics:
Introduction to research data management
Data curation and visualization
Documentation and archiving

Learning objectives
After successful attendance of the course, students know the basics of information management and applications of information management (business information systems but also data science). They will understand the handling of structured and unstructured data and corresponding procedures and approaches for information processing. An outlook on further topics (e.g., research data management) and current trends in information management (e.g., Big Data) will be given.

3 **Recommended prerequisites for participation**
Recommended: Participation of lecture „Funktionale und Objektorientierte Programmierkonzepte“ and „Algorithmen und Datenstrukturen“, respective according knowledge.

4 **Form of examination**
Course related exam:
- [20-00-0015-iv] (Technical examination, Oral/written examination, Default RS)
Written exam (90 min.).

5 **Prerequisite for the award of credit points**
Pass exam (100%)

6 **Grading**
Course related exam:
- [20-00-0015-iv] (Technical examination, Oral/written examination, Weighting: 100%)

7 **Usability of the module**
B. Sc. Informatik
B.Sc. Wirtschaftsinformatik
Lehramt an Gymnasien · Fach Informatik
May be used in other degree programs.

8 **Grade bonus compliant to §25 (2)**

### 1 Teaching content
- Efficient Data- Efficient Algorithms for Graph Scanning and Connectivity
- Optimal Trees and Branchings
- Network Flow Problems
- Matching and Assignment
- Planar Graphs.
- Theory, Generic Approaches, Improvement by means of Speedup Techniques and Structures

### 2 Learning objectives
After successfully attending the course, students
- know fundamental algorithms
- know techniques to improve efficiency
- can analyse graph algorithms
- know methods to exploit particular characteristics (planarity, sparseness)
- can judge practical efficiency of techniques

### 3 Recommended prerequisites for participation

### 4 Form of examination
Course related exam:
- [20-00-0110-iv] (Technical examination, Oral/written examination, Default RS)

### 5 Prerequisite for the award of credit points
Pass exam (100%)

### 6 Grading
Course related exam:
- [20-00-0110-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

### 7 Usability of the module

1 Teaching content
The Web contains more than 10 billion indexable web pages, which can be retrieved via keyword search queries. The lecture will present natural language processing (NLP) methods to automatically process large amounts of unstructured text from the web and analyze the use of web data as a resource for other NLP tasks.

Key topics:
- Processing unstructured web content
- NLP basics: tokenization, part-of-speech tagging, stemming, lemmatization, chunking
- UIMA: principles and applications
- Web contents and their characteristics, incl. diverse genres such as personal web sites, news sites, blogs, forums, wikis
- The web as a corpus - innovative use of the web as a very large, distributed, interlinked, growing, and multilingual corpus
- NLP applications for the web
- Introduction to information retrieval
- Web information retrieval and natural language interfaces
- Web-based question answering
- Mining Web 2.0 sites such as Wikipedia, Wiktionary
- Quality assessment of web contents
- Multilingualism
- Internet of services: service retrieval
- Sentiment analysis and community mining
- Paraphrases, synonyms, semantic relatedness

2 Learning objectives
After attending this course, students are in a position to
- understand and differentiate between methods and approaches for processing unstructured text,
- reconstruct and explicate the principle of operation of web search engines,
- construct and analyze exemplary NLP applications for web data,
- analyze and evaluate the potential of using web contents to enhance NLP applications.

3 Recommended prerequisites for participation
Basic knowledge in Algorithms and Data Structure
Programming in Java

1 Teaching content
With the rapid development of information technology bigger and bigger amounts of data are available. These often contain implicit knowledge, which, if it were known, could have significant commercial or scientific value. Data Mining is a research area that is concerned with the search for potentially useful knowledge in large data sets, and machine learning is one of the key techniques in this area.

This course offers an introduction into the area of machine learning from the angle of data mining. Different techniques from various paradigms of machine learning will be introduced with exemplary applications. To operationalize this knowledge, a practical part of the course is concerned with the use of data mining tools in applications.

- Introduction (Foundation, Learning problems, Concepts, Examples, Representation)
- Rule Learning
  - Learning of individual rules (generalization vs. specialization, structured hypothesis spaces, version spaces)
  - Learning of rule sets (covering strategy, evaluation measures for rules, pruning, multi-class problems)
- Evaluation and cost-sensitive Learning (Accuracy, X-Val, ROC Curves, Cost-Sensitive Learning)
- Instance-Based Learning (kNN, IBL, NEAR, RISE)
- Decision Tree Learning (ID3, C4.5, etc.)
- Ensemble Methods (Bias/Variance, Bagging, Randomization, Boosting, Stacking, ECOCs)
- Pre-Processing (Feature Subset Selection, Discretization, Sampling, Data Cleaning)
- Clustering and Learning of Association Rules (Apriori)

2 Learning objectives
After a successful completion of this module, students are in a position to
- understand and explain fundamental techniques of data mining and machine learning
- apply practical data mining systems and understand their strengths and limitations
- critically judge new developments in this area

3 Recommended prerequisites for participation

4 Form of examination
Course related exam:
- [20-00-0052-iv] (Technical examination, Oral/written examination, Default RS)

The form of the examination will be announced at the beginning of the course. One or a combination of max. two of the following forms is possible.

Written exam (duration 60 or 90 or 120 minutes), oral exam (duration 15 or 30 minutes), homework (optional: including tests).

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:
- [20-00-0052-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
May be used in other degree programs.

Module owner
Prof. Dr. phil. Iryna Gurevych

1 Teaching content
The lecture provides an introduction to the foundational concepts of deep learning and their application to problems in the area of natural language processing (NLP).

Main content:
- foundations of deep learning (e.g. feed-forward networks, hidden layers, backpropagation, activation functions, loss functions)
- word embeddings: theory, different approaches and models, application as features for machine learning
- different architectures of neuronal networks (e.g. recurrent NN, recursive NN, convolutional NN) and their application for groups of NLP problems such as document classification (e.g. spam detection), sequence labeling (e.g. POS-tagging, Named Entity Recognition) and more complex structure prediction (e.g. Chunking, Parsing, Semantic Role Labeling)

2 Learning objectives
After completion of the lecture, the students are able to
- explain the basic concepts of neural networks and deep learning.
- explain the concept of word embeddings, train word embeddings and use them for solving NLP problems.
- understand and describe neural network architectures that are used to tackle classical NLP problems such as classification, sequence prediction, structure prediction.
- implement neural networks for NLP problems using existing libraries in Python.

3 Recommended prerequisites for participation
Basic knowledge of mathematics and programming

4 Form of examination
Course related exam:

1 Teaching content
Fuzzy systems: basics, rule based fuzzy logic, design methods, decision making, fuzzy control, pattern recognition, diagnosis; Neural networks: basics, multilayer perceptrons, radial basis functions, pattern recognition, identification, control, interpolation and approximation, Neuro-fuzzy: optimization of fuzzy systems, data driven rule generation; Evolutionary algorithms: optimization problems, evolutionary strategies and their applications, genetic programming and its applications

2 Learning objectives
After attending the module, a student is capable of:
- recalling the elements and set-up of standardized fuzzy-logic, neural networks and evolutionary algorithms,
- discussing the pros and cons of certain set-ups of systems from computational intelligence for solving a given problem,
- recognizing situations in which tools taken from computational intelligence can be applied for problem solving,
- creating programs from algorithms taught in the lecture, and
- extending the learned standard procedures in order to solve new problems.

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

---

1 **Teaching content**
This graduate course is a foundation class on matrix analysis and computations, which are widely used in many different fields, e.g., machine learning, computer vision, systems and control, signal and image processing, communications, networks, optimization, and many more...

Apart from the theory this course will also cover the design of efficient algorithm and it considers many different examples from the aforementioned fields including examples from social media and big data analysis, image processing and medical imaging, communication network optimization, and written text classification.

Specific topics: (i) basic matrix concepts, subspace, norms, (ii) linear least squares (iii) eigendecomposition, singular value decomposition, positive semidenite matrices, (iv) linear system of equations, LU decomposition, Cholesky decomposition (v) pseudo-inverse, QR decomposition (vi) advanced tensor decomposition, advanced matrix calculus, compressive sensing, structured matrix factorization

---

2 **Learning objectives**
Students will have learned advanced topics in matrix analysis and related algorithms at an advanced level upon completion of the module.

---

3 **Recommended prerequisites for participation**
Basic knowledge in linear algebra.

---

4 **Form of examination**
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS)

The examination takes place in form of a written exam (duration: 120 minutes). If one can estimate that less than 10 students register, the examination will be an oral examination (duration: 20 min.). The type of examination will be announced in the beginning of the lecture.

---

5 **Prerequisite for the award of credit points**
Pass module final exam.

---

6 **Grading**
Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

---

7 **Usability of the module**

---

8 **Grade bonus compliant to §25 (2)**

1 Teaching content
Scientific computing is introduced via six case studies. Exemplary engineering problems that are known from basic engineering courses are solved on a computer using fundamental methods from numerical mathematics. Opportunities and limitations of this approach are highlighted.

The required material on numerical mathematics is taught via preparatory scripts for each case study. During the practical exercises the methods are implemented in the current computing environment Python under the guidance of suitable teaching personnel.

The case studies cover the following numerical topics:
- Formulation and solution of systems of linear equations, sparse methods
- Integration of ordinary differential equations (ODE) and their analysis based on eigenvalues
- Mathematical optimization and automated differentiation
- Linear regression and approximation, first Machine Learning algorithms
- Discretization of simple partial differential equations (PDE)

2 Learning objectives
After completing the module, the students have learned to work on engineering problems with modern computer tools and to use important basic technologies of scientific computing in a targeted manner. In doing so, the students have been taught an algorithmic way of thinking and are able to assess the possibilities and limitations of computer-based computational methods.

3 Recommended prerequisites for participation
Etit 1 & 2, Mathe for etit 1-3

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)

The exact form of the examination will be announced at the beginning of the first course. Either a report of experimental descriptions and/or a presentation of experimental results will be prepared.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
Etit B.A./M.Sc. with all options, as well as CE, ICE, IST

8 Grade bonus compliant to §25 (2)

### 1 Teaching content
Students will work on their own in this course. Topics and application context will be defined individually for each student. In this course hardware for neural networks will be investigated. This particularly means the improvement of software and hardware methods for efficient hardware for neural networks and the implementation of such hardware with commercial or open-source tools or FPGAs. Usually, the course starts with a literature search to get acquainted with the hardware for neural networks. This is followed by the practical part and finally the results are presented in a written report and a presentation.

### 2 Learning objectives
Successful students will know how to implement hardware for neural networks within a given application context. They can use tools to train a neural network and know how to realize it on a given hardware architecture. They are capable to evaluate the performance of an application.

### 3 Recommended prerequisites for participation
- Knowledge of neural network training and inference (cf. course hardware for neural network)
- Knowledge of digital or analog circuits (cf. course hardware for neural network)
- Solid programming skills (either in Python or VHDL depending on the application scenario)

### 4 Form of examination
Module exam:
- Module exam (Study achievement, Oral examination, Duration: 30 Min., Default RS)

### 5 Prerequisite for the award of credit points
Passing the final module examination

### 6 Grading
Module exam:
- Module exam (Study achievement, Oral examination, Weighting: 100 %)

### 7 Usability of the module
MSc WI-etit, MSc iST, MSc iCE

### 8 Grade bonus compliant to §25 (2)

### 9 References
Will be given to the students during the individual seminar kick-off meeting.

1. Teaching content
The World-Wide Web provides every internet user access to an ever-growing plentitude of information, which can not be processed without appropriate support. Web Mining is the research area that tries to solve this problem with machine learning and data mining techniques. In this course, we will discuss foundations of information retrieval and text classification, as well as consider the peculiarities of web documents (i.e., their document and graph structure).

- Introduction
- Web Mining Overview
- The Web, HTTP, HTML, DOM, XPath
- Data Mining Overview
- Structured, Semi-Structured and Unstructured Data
- Sample Web Mining Tasks
- Information Retrieval on the Web
- search engines & web crawlers
- document indexing
- the vector space model
- inverted index
- performance measures (recall & precision)
- relevance feedback
- estimating the size of the web
- Text Mining
- text classification
- document representation
- induction of classifiers (k-NN, Naive Bayes, SVMs, Rule Learners)
- Overfitting Avoidance
- Evaluation of Classifiers
- Multi-Label Classification
- feature engineering
- stop words
- feature subset selection
- n-grams
- stemming
- latent semantic indexing
- semi- and unsupervised learning
- clustering (k-means, bottom-up agglomerative)
- semi-supervised learning (active learning, self-training, co-training)
- Structure mining
- the Web as a graph
- hyperlink-based relevance ranking (hubs and authorities, page rank)
- hypertext classification (Naive Method, HyperClass, hyperlink ensembles)
- Information Extraction & Wrapper Induction
- conventional information extraction (AutoSlog)
- structured text (LR-Wrappers)
- semi-structured text (SoftMealy, WHISK, SRV, RAPIER)
- Web Usage Mining
- recommender systems
- memory-based collaborative filtering
- model-based collaborative filtering
- web log mining

2 Learning objectives
After attending this course, students are in a position to
- understand and explain fundamental techniques of information retrieval and web mining
- apply practical information retrieval and web mining systems and understand their strengths and limitations
- critically judge new developments in this area

### 3 Recommended prerequisites for participation

### 4 Form of examination

**Course related exam:**
- [20-00-0101-iv] (Technical examination, Oral/written examination, Default RS)

### 5 Prerequisite for the award of credit points

Pass exam (100%)

### 6 Grading

**Course related exam:**
- [20-00-0101-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

### 7 Usability of the module

1 Teaching content
Students have to work on a concrete practical problem in the area of artificial intelligence and solve it with the help of tools and techniques that they developed on their own or that are already publicly available.

Note the announcements on the homepage of the KE group regarding this course (http://www.ke.informatik.tudarmstadt.de/lehre/)! In semesters, where this course is not announced on the above pages, there is often the possibility of individual projects (please ask).

2 Learning objectives
After completion of this practical course, students should be able to
- recognize potential uses of artificial intelligence tools
- select appropriate tools for a given task and apply them to this task
- evaluate and measure the success of the use of such tools

3 Recommended prerequisites for participation
Basic knowledge in artificial intelligence

4 Form of examination
Course related exam:
  • [20-00-0412-pr] (Study achievement, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

This seminar serves the purpose of discussing new research papers in the areas of data mining and machine learning. Every participant will present one paper, which will be subsequently discussed by all participants. Grades are based on the preparation and presentation of the paper, as well as the participation in the discussion, in some cases also a written report.

The papers will typically recent publications in relevant journals such as “Data Mining and Knowledge Discovery”, “Machine Learning”, as well as “Journal of Machine Learning Research”. Students may also propose their own topics if they fit the theme of the seminar.

Please note current announcements to this course at http://www.ke.informatik.tu-darmstadt.de/lehre.

After this seminar, students should be able to
- understand an unknown text in the area of machine learning
- work out a presentation for an audience proficient in this field
- make useful contributions in a scientific discussion in the area of machine learning

Basic knowledge in Machine Learning and Data Mining

1 Teaching content
In this project lab groups of students will work on selected topics in deep learning (deep neural networks) for problems in computer vision. This includes the practical implementation with modern deep learning frameworks. Results will be presented in a talk at the end of the lab. Concrete topics follow the current state of the art and change from term to term.

2 Learning objectives
Through their successful participation, students acquire in-depth knowledge on deep neural networks and their applications in computer vision. They are able to analyze, modify, and apply state-of-the-art techniques in this area. Moreover, they practice their abilities for presenting their results and for collaboration in teams.

3 Recommended prerequisites for participation
* Solid programming skills in C/C++ or Python or Lua
* Prior or concurrent registration for "Computer Vision I"

Prof. Dr. rer. nat. Eberhard Mühlhäuser

1 Teaching content
Digital applications and the Internet are changing the way we learn. If digital teaching and learning applications are designed appropriately, they offer a wide range of possibilities. The module aims to impart basic knowledge about the most important aspects of system design and about technologies needed for modern, web-based and mobile learning applications. Important theoretical foundations for the design of learning applications are learning theories. Therefore, learning theories are briefly discussed in the context of this module. The focus of the module is on adaptive learning applications. Different methods for the realization of adaptive learning applications will be presented. Frequently, Natural Language Processing and Artificial Intelligence methods are used for this purpose. In this context, current research work is considered. The module also focuses on the design of learning applications for individual and cooperative learning in various fields of application (e.g. school, university, vocational education and lifelong learning). Examples from current research projects as well as teaching/learning practice are presented. In addition, methods for the evaluation of learning applications are considered.

2 Learning objectives
After completion of the module, students will be able to analyze and design applications for knowledge acquisition and learning based on different design patterns and technologies. They will be able to decide on information representation (data level), design of functionalities (application level), and selection/configuration of algorithms to support platform users concerning challenges in the learning process. Students are capable to consider techniques of adaptation to learners needs and will know appropriate evaluation methods to measure the qualities and effects of learning applications and the algorithms and methods used in the learning applications.

3 Recommended prerequisites for participation
Basic knowledge of Machine Learning and Natural Language Processing is desirable but not a prerequisite. For students who do not meet these requirements, we offer short learning modules that allow an understanding of the application-specific mechanisms.

4 Form of examination
Course related exam:
• [20-00-0773-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

### 1 Teaching content
- Algorithmic modeling languages like OPL and eclipse
- Modeling problems as (integer) linear programming problems
- Modelling as combinatorial optimization problems
- Complex case studies: e.g. applications in logistics and manufacturing; deterministic and stochastic scheduling

### 2 Learning objectives
After successfully attending the course,
- Students know modeling strategies for decision, construction, and optimization problems
- Students can apply two algorithmic modelling languages
- Student can adequately model complex problems

### 3 Recommended prerequisites for participation

### 4 Form of examination
Course related exam:
- [20-00-0113-iv] (Technical examination, Oral/written examination, Default RS)

1. **Teaching content**
The course provides an overview of recent advances in distributed systems for Big Data processing. The course starts presenting computational models for high throughput batch processing like MapReduce. Next, we will introduce software engineering techniques for distributed systems such as REST and component-based architectures. We will then cover low latency real-time stream processing and complex event processing. Finally, we will present advanced topics in distributed data-intensive systems, such as geodistribution and security.

The course focuses both on the fundamental concepts as well as on the concrete technologies and applications of the aforementioned techniques to real-world case studies.

2. **Learning objectives**
- The students are familiar with basic concepts and technologies on distributed systems and big data and are able to implement basic cloud-based/distributed applications.

- The students are familiar with the fundamental computational models behind recent advances in distributed systems, such as models for batch processing of massive data amounts, stream processing and complex event processing.

- The students are familiar with selected advanced topics on big data, including security and geolocalization.

- The students know about real-world case studies that apply the concepts and the technologies presented during the course.

3. **Recommended prerequisites for participation**
This course is targeted at master students.

4. **Form of examination**
Course related exam:
- [20-00-0951-iv] (Technical examination, Oral/written examination, Default RS)

5. **Prerequisite for the award of credit points**
Pass exam (100%)

6. **Grading**
Course related exam:
- [20-00-0951-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7. **Usability of the module**

1 **Teaching content**

This lecture provides an introduction into the fundamental perspectives, problems, methods, and techniques of text technology and natural language processing using the example of the Python programming language.

Key topics:

- Natural language processing (NLP)
- Tokenization
- Segmentation
- Part-of-speech tagging
- Corpora
- Statistical analysis
- Machine Learning
- Categorization and classification
- Information extraction
- Introduction to Python
- Data structures
- Structured programming
- Working with files
- Usage of libraries
- NLTK library

The course is based on the Python programming language together with an open-source library called the Natural Language Toolkit (NLTK). NLTK allows explorative and problem-solving learning of theoretical concepts without the requirement of extensive programming knowledge.

2 **Learning objectives**

After attending this course, students are in a position to

- define the fundamental terminology of the language technology field,
- specify and explain the central questions and challenges of this field,
- explicate and implement simple Python programs,
- transfer the learned techniques and methods to practical application scenarios of text understanding, as well as
- critically assess their merits and limitations.

3 **Recommended prerequisites for participation**

4 **Form of examination**

Course related exam:
- [20-00-0546-iv] (Technical examination, Oral/written examination, Default RS)

5 **Prerequisite for the award of credit points**

Pass exam (100%)

6 **Grading**

Course related exam:
- [20-00-0546-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

1 Teaching content
Algorithmic standard approaches to complex discrete optimization problems; for example, evolution strategies, dynamic programming, branch-and-bound, etc.

2 Learning objectives
In this course students acquire systematic knowledge of generic algorithmic approaches in discrete optimization and the ability to tackle complex discrete optimization problems algorithmically.

3 Recommended prerequisites for participation
Funktionale und objektorientierte Programmierkonzepte, Algorithmen und Datenstrukturen or similar.

4 Form of examination
Course related exam:
- [20-00-0667-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:

1 Teaching content
The course will provide an overview of a new vision for Human-Computer-Interaction (HCI) in which people are surrounded by intelligent and intuitive interfaces embedded in the everyday objects around them. In specific the course addresses the emergence of Ambient Mobility and the ubiquitous, pervasive information access, retrieval and display on mobile devices. It will focus on understanding enabling technologies and studying applications and experiments, and, to lesser extent, it will adress the sociocultural impact. Additional topics of the lecture include system architectures for distributed systems, context awareness and management, user models and their implications, sensing and interaction in smart environments. The lecture discusses recent topics and research projects in the domain of Ambient Intelligence.

2 Learning objectives
After successfully attending the lecture, the students will be able to describe technology trends and research results in the domain of Ambient Intelligence. The most important concepts to create smart environments - intelligent networks and objects, technologies for mobile, augmented reality, ubiquitous and pervasive information spaces, nomadic communications, real-time communication and related middle ware, embedded systems, sensor networks and wearable computing - can be discussed and classified. After completing the practical part, students will be able to plan and realize the different project phases required to develop an Ambient-Intelligence solution.

3 Recommended prerequisites for participation
Master-Students
Participation in lecture "Visual Computing“ and „Multimodale Interaktion mit intelligenten Umgebungen“

4 Form of examination

1 Teaching content
- Introduction: transition systems, words, languages; basic mathematical methods and proof patterns; finite automata and regular languages; determinism and nondeterminism, closure properties and automata constructions, Kleene Theorem, Myhill-Nerode Theorem, pumping lemma;
- Grammars and the Chomsky hierarchy, context-free languages, pumping lemma, CYK algorithm;
- Models of computation: PDA and Turing machines; decidability and recursive enumerability in the Chomsky hierarchy

2 Learning objectives
- Schöning: Theoretische Informatik – kurz gefasst
- Hopcroft, Motwani, Ullman: Einführung in die Automatentheorie, formale Sprachen und Komplexitätstheorie
- Wegener: Theoretische Informatik – eine algorithmenorientierte Einführung
- Skript (elektronisch unter www.mathematik.tu-darmstadt.de/~otto)

3 Recommended prerequisites for participation
- None

4 Form of examination
- Module exam:
  - Module exam (Study achievement, Oral/written examination, p/np RS)
  - Module exam (Technical examination, Oral/written examination, Default RS)

  Fachprüfung: Usually the exam is taken in form of a written test (90 min), except when there are only a small number of potential participants. In this case, the exam can be taken in the form of an oral exam (30 min). The decision about the form of the exam is taken and communicated during the first two weeks of the lecture, based on the prospective number of students taking the exam.

  Studienleistung: Usually this means that the student successfully completes a certain proportion of the homework assignments. The precise proportion of necessary assignments and the marking scheme will be communicated by the instructor during the first lecture.

5 Prerequisite for the award of credit points
- Passing the final module examination

6 Grading
- Module exam:
  - Module exam (Study achievement, Oral/written examination, Weighting: 0 %)
  - Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

8 Grade bonus compliant to §25 (2)

### Teaching content
- Review of machine learning background
- Deep Feedforward Networks
- Regularization for Deep Learning
- Optimization for Training Deep Models
- Convolutional Networks
- Sequence Modeling: Recurrent and Recursive Nets
- Linear Factor Models
- Autoencoders
- Representation Learning
- Structured Probabilistic Models for Deep Learning
- Monte Carlo Methods
- Approximate Inference
- Deep Generative Models
- Deep Reinforcement Learning
- Deep Learning in Vision
- Deep Learning in NLP

### Learning objectives
This course provides students with the required advanced background on machine learning the knowledge to independently carry out research projects on the hot topic of deep learning, e.g. within the scope of a Bachelor's or Master's thesis. In particular, this class aims at providing the students with fundamental understanding of deep learning algorithms and the architecture of deep networks.

1 Teaching content
The seminar introduces current topics in natural language processing. It provides a thorough introduction into state-of-the-art technology in text analytics. The main focus of the seminar changes each semester.

Further information: https://www.ukp.tu-darmstadt.de/teaching/courses/regular-seminar/

2 Learning objectives
After attending this course, students are in a position to
- name and explain state-of-the-art research questions in the area of the seminar,
- understand, critically assess, and discuss scientific publications,
- independently comprehend and work out a research topic and
- present it to the group and react on questions and discussion threads.

1 Teaching content
This seminar serves the purpose of discussing new research papers in the intersection of hardware/software-systems and machine learning. The seminar aims to elicit new connections amongst these fields and discusses important topics regarding systems questions machine learning including topics such as hardware accelerators for ML, distributed scalable ML systems, novel programming paradigms for ML, Automated ML approaches, as well as using ML for systems.

Every participant will present one research paper, which will be subsequently discussed by all participants. In addition, summary papers will be written in groups and submitted to a peer review process. The papers will typically be recent publications in relevant research venues and journals.

The seminar will be offered as a block seminar. Further information can be found at: http://binnig.name

2 Learning objectives
After this seminar, the students should be able to
- understand a new research contribution in the areas of the seminar
- prepare a written report and present the results of such a paper in front of an audience
- participate in a discussion in the areas of the seminar
- to peer-review the results of other students

3 Recommended prerequisites for participation
Basic knowledge in Machine Learning, Data Management, and Hardware-/Software-Systems.

Teaching content

- Concepts of machine learning
- Linear methods
- Support vector machines
- Trees and ensembles
- Training and assessment
- Unsupervised learning
- Neural networks and deep learning
- Convolutional neuronal networks (CNNs)
- CNN applications
- Recurrent neural networks (RNNs)

Learning objectives

Upon completion of the module, students will have a broad and practical view on the field of machine learning. First, the most relevant algorithm classes of supervised and unsupervised learning are discussed. After that, the course addresses deep neural networks, which enable many of today's applications in image and signal processing. The fundamental characteristics of all algorithms are compiled and demonstrated by programming examples. Students will be able to assess the methods and apply them to practical tasks.

Recommended prerequisites for participation

Fundamental knowledge in linear algebra and statistics
Preferred: Lecture “Fuzzy logic, neural networks and evolutionary algorithms”

Form of examination

Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)

The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 7 students register, the examination will be an oral examination (duration: 30 min.). The type of examination will be announced in the beginning of the lecture.

Prerequisite for the award of credit points

Passing the final module examination

Grading

Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

Usability of the module

Grade bonus compliant to §25 (2)

1. **Teaching content**
   - Generative Models, Implicit and Explicit Models, Maximum Likelihood, Variational AutoEncoders, Generative Adversarial networks, Numerical Optimization for Generative models, Applications in medical Imaging

2. **Learning objectives**
   - After students have attended the module, they can
     - Explain the structure and operation of Deep Generative Models (DGM)
     - Critically scrutinize scientific publications on the topic of DGMs and thus assess them professionally
     - Independently construct / implement basic DTM s in a high-level programming language designed for this purpose
     - Transfer the implementation and application of DTM s to different applications

3. **Recommended prerequisites for participation**
   - Python Programming
   - Linear Algebra
   - Image Processing/Computer Vision I
   - Statistical Machine Learning

4. **Form of examination**
   - Course related exam:
     - [20-00-1035-iv] (Technical examination, Oral/written examination, Default RS)

5. **Prerequisite for the award of credit points**
   - Pass exam (100%)

6. **Grading**
   - Course related exam:
     - [20-00-1035-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7. **Usability of the module**
   - B,Sc, Informatik
   - M,Sc. Informatik
   - May be used in other degree programs.

8. **Grade bonus compliant to §25 (2)**
   - In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.

9. **References**
   - No textbooks as such. Online materials will be made available during the course.

Credit points
4 CP

Workload
120 h

Self-study
75 h

Module duration
1 Term

Module cycle
Summer term

Language
English

Module owner
Prof. Dr.-Ing. Anja Klein

1 Teaching content

• Review of Probability Theory
• Markov Property and Markov Decision Processes
• The Multi-Armed Bandit Problem vs. the Full Reinforcement Learning Problem
• Taxonomy of Multi-Armed Bandit Problems (e.g., Stochastic vs. Adversarial Rewards, Contextual MAB)
• Algorithms for Multi-Armed Bandit Problems (e.g., Upper Confidence Interval (UCB), Epsilon-Greedy, SoftMax, LinUCB) and their Application to Cyber-Physical Networking
• Fundamentals of Dynamic Programming and Bellman Equations
• Taxonomy of Approaches for the Full Reinforcement Learning Problem (e.g., Temporal-Difference Learning, Policy Gradient and Actor-Critic)
• Algorithms for the Full Reinforcement Learning Problem (e.g., Q-Learning, SARSA, Policy Gradient, Actor-Critic) and their Application to Cyber-Physical Networking
• Linear Function Approximation
• Non-linear Function Approximation

2 Learning objectives
The students are able to
• define the Markov property and identify the elements that constitute a Markov decision process. They will be able to use these concepts to model decision-making problems in Cyber-Physical Networking.
• determine the characteristics of the Multi-Armed Bandit (MAB) Problem and compare them to the characteristics of the Full Reinforcement Learning (RL) Problem.
• determine under which conditions the MAB or the full RL formulation should be used to solve decision-making problems.
• differentiate the main MAB strategies, e.g., Upper Confidence Interval (UCB), Epsilon-Greedy and Softmax.
• choose appropriate MAB strategies for the solution of MAB problems.
• formulate and solve Contextual-MAB problems.
• determine under which conditions Dynamic Programming can be used to solve decision-making problems.
• explain the difference between Dynamic Programming and RL methods.
• differentiate between Temporal-Difference, Policy Gradient and Actor-Critic RL techniques.
• identify the limitations of MAB and full RL problems.
• explain the need for generalization in MAB and full RL problems.
• choose appropriate approximation techniques and use them in combination with MAB and full RL strategies.
• apply algorithmic techniques to solve MAB and full RL problems and obtain valid solutions.
• judge the reasonableness and consistency of the obtained solutions.

3 Recommended prerequisites for participation

• Python or Matlab: basic knowledge
• Engineering mathematics and probability theory

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 60 Min., Default RS)

The examination takes place in form of a written exam (duration: 60 minutes). If one can estimate that less than 21 students register, the examination will be an oral examination (duration: 20 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
MSc (Wi-) etit, BSc/MSc iST, MSc iCE, MSc MEC

8 Grade bonus compliant to §25 (2)

1 Teaching content
Artificial Intelligence (AI) is concerned with algorithms for solving problems, whose solution is generally assumed to require intelligence. While research in the early days was oriented on results about human thinking, the field has since developed towards solutions that try to exploit the strengths of the computer. In the course of this lecture we will give a brief survey over key topics of this core discipline of computer science, with a particular focus on the topics search, planning, learning, and reasoning. Historical and philosophical foundations will also be considered.

- Foundations
- Introduction, History of AI (RN chapter 1)
- Intelligent Agents (RN chapter 2)
- Search
- Uninformed Search (RN chapters 3.1 - 3.4)
- Heuristic Search (RN chapters 3.5, 3.6)
- Local Search (RN chapter 4)
- Constraint Satisfaction Problems (RN chapter 6)
- Games: Adversarial Search (RN chapter 5)
- Planning
- Planning in State Space (RN chapter 10)
- Planning in Plan Space (RN chapter 11)
- Decisions under Uncertainty
- Uncertainty and Probabilities (RN chapter 13)
- Bayesian Networks (RN chapter 14)
- Decision Making (RN chapter 16)
- Machine Learning
- Neural Networks (RN chapters 18.1, 18.2, 18.7)
- Reinforcement Learning (RN chapter 21)
- Philosophical Foundations

2 Learning objectives
After a successful completion of this module, students are in a position to
- understand and explain fundamental techniques of artificial intelligence
- participate in a discussion about the possibility of an artificial intelligence with well-founded arguments
- critically judge new developments in this area

3 Recommended prerequisites for participation

4 Form of examination
Course related exam:
- [20-00-1058-iv] (Technical examination, Oral/written examination, Default RS)
  Written Exam (90 min.)

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:
- [20-00-1058-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
   B.Sc. Informatik  
   M.Sc. Informatik  
   M.Sc. Autonome Systeme und Robotik  
   M.Sc. Artificial Intelligence and Machine Learning

   May be used in other degree programs.

8 Grade bonus compliant to §25 (2)

Language English

Module owner Prof. Dr.-Ing. Ermira Mezini

1 Teaching content
- General introduction and motivation
- Introduction to Quantum mechanics (states, measurements, evolution, a short review of linear algebra)
- Elementary quantum gates and circuit model
- Universal quantum computation
- Quantum parallelism and Deutsch-Jozsa Algorithm
- Simon's Algorithm
- The Fourier Transform
- Shor's Factoring Algorithm
- Hidden Subgroup Problem
- Grover's Search Algorithm
- Quantum Error-Correction and Fault-Tolerance
- Entanglement and Nonlocality
- A basic introduction to quantum key distribution
- Overview of quantum computing platforms and claims of quantum advantage

2 Learning objectives
After completing the module, students will be familiar with all of the fundamental concepts of quantum information processing and computing and will be able to program them using the quantum programming language Qiskit. They will learn the most important ‘peculiarities’ of the quantum world and will be able to connect them to computational and cryptographic tasks. Finally, at the end of the lecture, a summary of the most recent developments in industry and academia will be provided, allowing students to navigate their future interests in the field.

3 Recommended prerequisites for participation
Basic knowledge of elementary linear algebra (matrix multiplication, determination of eigenvalues) is recommended.

4 Form of examination
Course related exam:
- [20-00-1136-iv] (Technical examination, Oral/written examination, Default RS)

The form of the examination will be announced at the beginning of the course. One or a combination of max. two of the following forms is possible.

Written exam (duration 60 or 90 or 120 minutes), oral exam (duration 15 or 30 minutes), homework (optional: including tests).

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:

1 **Teaching content**

The lecture gives an introduction to the technical processes for the use of energy for the human civilization in general and to the basic tasks and challenges of the electrical energy in particular. Biochemical energy processes such as the human metabolism are therefore not subject of the course.

First, the physical basics of the term "energy" are repeated and the different forms of energy (mechanical, thermal, electromagnetic, chemical and nuclear) are explained in terms of the technical use of energy as heat, mechanical movement and electricity.

Then, an overview of the energy resources is given, starting from the solar radiation and its direct and indirect impact, such as the solar heat and the motion of air mass, surface water and sea waves. Next, the energy source of biomass due to solar radiation and the fossil energy sources oil, natural gas and coal will be discussed. The energy sources of nuclear fission (uranium deposits) and nuclear fusion (heavy water), and geothermal energy due to nuclear effects in the Earth's interior are explained as well as the tidal effects caused by planetary motion.

The increasing energy demand of the rapidly growing world population and the geographic distribution of energy sources (deposits, acreage, solar radiation, wind maps, tidal currents, ...) are described.

The resulting energy flows on transport routes such as pipelines, waterways, ..., are briefly presented. In another section, energy conversion processes (direct and indirect methods) are illustrated. Large-scale processes such as thermal cycles or hydraulic processes in power plants are discussed mainly, but also marginal processes such as thermionic converters are addressed. Afterwards, a specialization takes place on the subject of electric power supply with respect to the increasing proportion of the electric power applications. The chain from the electric generator to the consumer with an overview of the required resources, the hiring electrical load flow and its stability is addressed. The storage of energy and in particular of electrical energy by converting into other forms of energy will be discussed. Finally, questions for the contemporary use of energy resources in regard to sustainability are mentioned.

2 **Learning objectives**

Students know the physically based energy basics and have an overview of the energy resources of our planet Earth.

They understand the fundamental energy conversion processes on the technical use of energy in the form of heat as well as mechanical and electrical work.

They have acquired basic knowledge of electrical engineering in the chain of effects from electric power producer to the consumer and are able to educate themselves about current issues of energy use and its future development.

They are able to perform basic calculations for energy content, energy conversion, efficiencies, storage, and for conversion and transportation losses. They are prepared for advanced lectures on energy components and systems, energy industry, and on future forms of energy supply.

3 **Recommended prerequisites for participation**

Basic knowledge of physics (mechanics, thermodynamics, electrical engineering, structure of matter) and chemistry (binding energy) are desirable and facilitate understanding of the energetic processes.

4 **Form of examination**

Module exam:
- Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)
5 **Prerequisite for the award of credit points**  
Passing the final module examination

6 **Grading**  
Module exam:  
- Module exam (Technical examination, Examination, Weighting: 100 %)

7 **Usability of the module**  
BSc ETiT, BSc WI-ETiT, BSc MEC, BSc iST, BSc CE, MSc ESE

8 **Grade bonus compliant to §25 (2)**  
At the beginning of the semester, it will be announced whether there will be homework tests accompanying the lecture that will enable an improvement in grades.

#### Teaching content
Three-phase network and symmetrical components; overhead lines; cables; transformers; calculation of short-circuit currents; switch equipment; switchgears

#### Learning objectives
Upon completion of the module, students will have learned:
- Presentation of components of power system
- Functional elaboration of equipment
- Calculation of the component rating
- Impact on the electrical power system

#### Recommended prerequisites for participation
Comparable competences to the module 'Power Engineering'

#### Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

#### Prerequisite for the award of credit points
Passing the final module examination

#### Grading
Module exam:

Prof. Dr.-Ing. Yves Burkhardt

1 Teaching content
Construction and function of induction machine, synchronous machine, direct current machine. Electromagnetic field within machines, armature windings, steady-state performance as motor/generator, application as line-fed and inverter-fed drives. Significance for electric power generation, both to the grid and in stand-alone version.

2 Learning objectives
Upon successful completion of the module, students will be able to:
• calculate and explain the stationary operation performance of the three basic types of electric machine in motor and generator mode,
• understand the application of electrical machines in modern drive systems and to design simple drive applications by yourself,
• understand and explain the function and physical background of the components of electrical machines
• understand and explain the impact of basic electromagnetic field and force theory on the basic function of electrical machines.

3 Recommended prerequisites for participation
Mathematics I to III, Electrical Engineering and Information Technology I and II, Physics, Mechanical Engineering

4 Form of examination
Module exam:
• Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
• Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module
BSc ETiT, BSc/MSc Wi-ETiT, BEd

8 Grade bonus compliant to §25 (2)
At the beginning of the semester, it will be announced whether there will be short tests accompanying the lecture that will enable an improvement in grades.

Prof. Dr.-Ing. Gerd Griepentrog

1 Teaching content
Power electronic devices convert the energy from the distribution network to the form required by the load. This conversion does not wear out, can be controlled very fast and has a high efficiency. In lecture “Power Electronics” the most important circuits required for the energy conversion are treated, using ideal switches.

The main chapters are
1.) Line commutated converters in order to understand the basic concepts of power electronic systems.
2.) Self-commutated converters (one, two and four quadrant converters, 3-phase- VSI)

2 Learning objectives
The module teaches students after successful completion:
• Understand the ideal concept of power semiconductors
• Calculate and sketch the time-characteristics of all currents and voltages in a line-commutated converter using defined simplifications as well as represent the behavior of currents and voltages during commutation in line-commutated converters for center-tapped as well as for bridge circuits.
• Specify the basic circuit diagrams for one, two and four quadrant DC/DC converters and calculate the characteristics of voltages and currents in these circuits.
• Explain the function of single-phase and three-phase voltage source inverters and calculate the currents and voltages in these circuits using defined simplifications.
• Understand the concept and operation of HVDC converter

3 Recommended prerequisites for participation
Mathe I und II, ETiT I und II, Energietechnik

4 Form of examination
Module exam:
• Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
• Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module
MSc ETiT, MSc MEC, Wi-ETiT

8 Grade bonus compliant to §25 (2)

Module owner
Prof. Dr. Myriam Koch

1 Teaching content
Calculation of electrostatic fields, voltage distribution in insulating systems and layered dielectrics, field and potential control measures, breakdown of gases, surface discharge and pollution flashover, vacuum breakdown, generation and measurement of high voltages.

2 Learning objectives
After participating in the module, students will be able to explain fundamental phenomena and principles related to high electric fields and they will be able to identify critical, highly stressed regions in electric field maps. They will be able to perform field optimizations through specific design of the dielectric materials and field-controlling geometries.

They understand the various mechanisms that lead to failure of a gas-insulated systems, know which parameters affect their electrical strength, and can apply design criteria. They can identify weak points in the insulation system and propose improvements. They will be able to make an estimation of the breakdown or flashover voltage, respectively. Students will be able to identify regions with potential surface discharges and know how pollution flashover develops and how it can be avoided.

Students will be able to explain the processes involved in vacuum breakdown and how it differs from gas breakdown. Furthermore, the students are able to explain the most important designs for high-voltage generators and to name suitable measuring equipment.

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
• Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS)

With up to 20 participants the examination will take place as an oral exam (duration: 30 min), otherwise as a written exam (duration: 120 min). The type of examination will be announced at the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
• Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
BSc ETiT

8 Grade bonus compliant to §25 (2)
Grade improvements up to 0.4 according to APB 25 (2) through bonus for successful participation in the internship.

Module owner
Prof. Dr.-Ing. Gerd Griepentrog

1 Teaching content
Switch mode power supplies (insulating DC/DC-converters) Realistic behavior of power semiconductors:
Basics of semiconductor physics; Behavior of diode, bipolar transistor, SCR, GTO, MOSFET and IGBT, Important circuits for switching real semiconductors with low losses
Thermal design and thermo mechanical aging of power electronics systems
Reliability of Power electronic systems
Forced commutation of SCRs, Loss reducing snubbers, quasi- resonant circuits, resonant switching.
Topologies and control strategies for multilevel converter

2 Learning objectives
Upon successful completion of the module, students will be able to:

1. Explain und understand the cross sectional layers and the basic modes of operation for power semiconductors (diode, thyristor, GTO, Mosfet and IGBT). Describe the steady state and dynamic behavior of these devices.
2. Identify the circuit diagrams for isolating DC/DC converters, especially for use in switched mode power supplies. Calculate the currents and voltages in these circuits using defined simplifications.
3. Describe the functions of gate dive-circuits for IGBTs.
4. Calculate the thermal behavior and design the cooling equipment for a voltage source inverter equipped with IGBT modules.
5. Describe the stress reliving circuits to reduce switching losses in IGBTs.
6. Calculate the current and voltage characteristics in quasi-resonant and resonant circuits used in power electronics.
7. Explain multilevel converters such as 3L-NPC and MMC
8. Know the main concepts for cooling of power electronics incl. the ability to design a cooling concept and should know main aspects which influence lifetime

3 Recommended prerequisites for participation
BSc ETiT or equivalent, especially Power Electronics and Basics of Semiconductors

4 Form of examination
Module exam:
• Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
• Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module
MSc ETiT, MSc EPE, Wi-ETIT

8 Grade bonus compliant to §25 (2)

1 Teaching content
Microcontroller and programmable logic devices are being used for a variety of control tasks for industrial and residential products and systems. For the control of drives and power electronics, those devices are used for the control of frequency converters or DC/DC converters.

In most of these applications, real time requirements have to be met. Simultaneously a communication interface has to be served.

The module will impart knowledge and expertise on how to realize successfully control task.

More in detail, the following content will be taught:
   • Architecture of microcontroller
   • Structure and function of FPGAs, tools and programming languages
   • Typical peripheral components for microcontrollers
   • Capture & Compare, PWM, A/D-converter
   • I2C, SPI, CAN, Ethernet
   • Programming of microcontrollers in C
   • Software: real-time properties, interrupt handling, interrupt latency
   • Control of inductive components
   • Basic of circuit design for power electronics, Power-MOSFETS, IGBTs
   • Numerical methods

2 Learning objectives
Students will be able to:
   • Separate a digital control task into HW and SW parts
   • Specify the HW-content in a HW description language and implement the SW by means of a microcontroller
   • Evaluate the real-time capabilities of a program and to determine upper limits for the response time of the system
   • Transfer the developed solution to the target system by means of a development kit and debug the software onto the target system.

3 Recommended prerequisites for participation
Basic knowledge in programmig language C (syntax, operators, pointer)

4 Form of examination
Module exam:
   • Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
   • Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module
MSc MEC, MSc ETIT

8 Grade bonus compliant to §25 (2)

Prof. Dr.-Ing. Yves Burkhardt

1 Teaching content
Design of cage-rotor and wound-rotor induction machines: Calculation of forces, torque, losses, efficiency, cooling and temperature rise. Transient machine performance of converter-fed dc machines and line-fed and inverter-fed ac machines. Theory is illustrated by examples: Sudden short circuit, load step, run up. For control design transfer functions of machines are derived. In the exercise lessons demonstration examples of power transformer and induction motor design are given. The students design one induction machine in small groups by themselves. Transient performance calculation is trained by using Laplace-Transformation and MATLAB.

2 Learning objectives
Upon successful completion of the module, students will be able to:
• do and explain the electromagnetic design of an induction machine both analytically and with use of computer program,
• understand and predict the thermal performance of electrical drives in a simplified way,
• calculate the instationary performance of separately excited DC drives
• to predict the dynamical performance of AC polyphase machines with space vector theory and use the MATLAB/Simulink package for this purpose.

3 Recommended prerequisites for participation
Bachelor of Science in Electrical Engineering, Power Engineering or similar

4 Form of examination
Module exam:
• Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
• Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module
MSc ETiT, MSc MEC, MSc EPE

8 Grade bonus compliant to §25 (2)
At the beginning of the semester, it will be announced whether there will be homework tests accompanying the lecture that will enable an improvement in grades.

1. **Teaching content**
   In an introductory meeting topics according to power electronics and control of drives are given to the students. During the seminar problems can be treated concerning the following topics:
   - Simulation of power electronic systems plus analysis and evaluation of the models
   - Implementing and startup of power electronic systems, test stand development plus measurement of characteristic parameters
   - Modeling and simulation in the field of control of electrical drives
   - Implementing and startup of controlled drive systems
   - Suggested topics from the students are welcome

2. **Learning objectives**
   Upon completion of the module, students will have learned:
   - Autonomous familiarization with a given problem
   - Selection and evaluation of appropriate development tools
   - Familiarization with the used development tools
   - Practical experience in power electronics and control of drives
   - Logical presentation of the results in a report
   - Presentation skills

3. **Recommended prerequisites for participation**
   Lecture „Leistungselektronik 1“ or „Einführung Energietechnik“ and ggf. „Regelungstechnik I“ or similar

4. **Form of examination**
   Module exam:
   - Module exam (Study achievement, Oral/written examination, Default RS)
   Report and/or Presentation and/or Colloquium. The type of examination will be announced in the beginning of the lecture.

5. **Prerequisite for the award of credit points**
   Passing the final module examination

6. **Grading**
   Module exam:
   - Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7. **Usability of the module**
   MSc ETiT, MSc Wi-ETiT, MSc MEC

8. **Grade bonus compliant to §25 (2)**

### 1 Teaching content
The lecture reviews the different levels of energy management. It then focuses on economic dispatch and discusses its different use cases like optimization of self-consumption, virtual power plants, electric vehicle load management or multi-modal neighborhood optimization. Relevant knowledge about the components to be controlled as well as the markets to be addressed is explained.

After this introduction to economic dispatch's application environment, the lecture focuses on the methods employed. The underlying mathematical formulations as different types of optimization problems (LP, MILP, QP, stochastic optimization) are reviewed. In parallel, a practical introduction to numerical optimization is given (descent algorithms, convergence, convexity, programming languages for the formulation of optimization problems). Moreover, an introduction into simple methods for the prognosis of future values (linear regression) is provided.

All methodological learning is accompanied by hands-on exercises using Python and the mathematical modeling language GAMS.

### 2 Learning objectives
Students know the different use cases and formulations of economic dispatch. They have a basic understanding of the typically employed optimization methods and are able to judge the quality of the achieved results. Moreover, students are independently able to formulate (energy) optimization problems and solve them with Python and GAMS.

### 3 Recommended prerequisites for participation
Standard knowledge of linear algebra and multivariate analysis as well as basic knowledge in the use of Python is required. Knowledge of the modules „Kraftwerke & EE“ or „Energiewirtschaft“ is helpful but not necessary.

### 4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)

The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 8 students register, the examination will be an oral examination (duration: 25 min.). The type of examination will be announced in the beginning of the lecture.

### 5 Prerequisite for the award of credit points
Passing the final module examination

### 6 Grading
Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

### 7 Usability of the module
MSc ETiT, MSc iST, MSc Wi-ETiT, MSc CE

### 8 Grade bonus compliant to §25 (2)
Improvement of grades up to 0.4 compliant to APB 25(2) through bonus system for regular attention of exercises and practical courses

## Workload

180 h

## Self-study

120 h

## Module duration

1 Term

## Module cycle

Winter term

### Language

English

### Module owner

Prof. Dr. rer. nat. Florian Steinke

---

## 1 Teaching content

- Data-based modelling (aka machine learning) principles: role of models, different metrics & validation criteria
- Standard settings & basic methods (deterministic and probabilistic approaches): Regression (k-NN, linear regression / LASSO, deep neural networks) Classification (trees & forests, logistic regression, deep neural networks) Unsupervised learning (k-means, PCA, mixture models, autoencoder)
- Advanced topics: experiment design, dynamic models
- Application examples from the electrical engineering domain (energy systems, control & communication tasks)
- Outlook to probabilistic graphical models as a unifying framework

Practical exercises with Python deepen the understanding and support students' skills to independently solve new problems.

## 2 Learning objectives

Students understand the key data-based modelling / machine learning settings and important algorithms for each task. Moreover, the students are able to discover a suitable standard setting of data-based modelling behind many typical applications in the electrical engineering domain. They can then independently apply and adapt standard methods to solve these problems.

## 3 Recommended prerequisites for participation

Mathematics I/II/III, Statistics/Probability Theory, Scientific Computing (etit bases courses)

Using Python for programming the practical examples should pose no difficulty.

## 4 Form of examination

Module exam:

- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

## 5 Prerequisite for the award of credit points

Passing the final module examination

## 6 Grading

Module exam:

- Module exam (Technical examination, Examination, Weighting: 100 %)

## 7 Usability of the module

BSc etit

## 8 Grade bonus compliant to §25 (2)

Grade improvements up to 0.4 according to APB 25(2) through bonus for regularly attended practice/internship appointments and independent work on a case study.

Teaching content
The lecture Power Supply II deals with the dynamic behavior of electrical power systems. For this the stationary behavior of the equipment is extended by the dynamic behavior, in order to show the resulting network behavior. With this background in-depth insights into the stability of the electrical power supply network are provided. The influence of controlled generation plants on stability is addressed. Finally, power quality is considered, which is gaining importance for steady-state and dynamic behavior with the increased use of power electronics.

The following topics will be covered:
• Steady-state and dynamic behavior of synchronous generators and renewable generation plants (grid behavior and control of power electronic converters)
• Time curve of short-circuit currents and their quasi-stationary calculation
• Stability types (static stability, transient stability, voltage stability, frequency stability, resonance stability & inverter-driven stability)
• Power quality

Learning objectives
After successful completion of the module, the students have a profound understanding of the different types of stability of electrical power systems. They have gained a basic understanding of dynamic network behavior and the control of generation plants, as well as power quality.

Recommended prerequisites for participation
Knowledge comparable to "Energieversorgung I" or basic knowledge of power system equipment and calculations using symmetrical components.

Form of examination
Module exam:
• Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

Prerequisite for the award of credit points
Passing the final module examination

## Teaching content

Fundamentals of Electromagnetic Compatibility, sources of emission, coupling mechanisms and counter measures, components for noise suppression, electromagnetic shields, EMC measuring and test techniques, excursion to VDE Offenbach

## Learning objectives

The students know that from every electromagnetic system an interaction is possible and that every electromagnetic (and also biological) system can be effected; they can differ between typical interference sources and sinks; they know the typical coupling paths and can identify and describe them mathematically; they know the basic methods to avoid interference at the source side and can derive their own actions against interference from this basic understanding; they know the basic actions to avoid interference at the sink side and can also derive actions to avoid interference; they have the ability to recognize coupling paths and can systematically influence or interrupt them completely; they know the situation of the EMC standardization and know basically which requirements have to be fulfilled and how to do this (also i.e. how to give a device a CE-label); they have learned the most important EMC testing and measurement techniques theoretically and practically know on the field trip.

## Recommended prerequisites for participation

## Form of examination

Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS)

The examination takes place in form of a written exam (duration: 120 minutes). If one can estimate that less than 20 students register, the examination will be an oral examination (duration: 20 min.). The type of examination will be announced in the beginning of the lecture.

## Prerequisite for the award of credit points

Passing the final module examination

## Grading

Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

## Usability of the module

MSc ETiT, MSc MEC, MSc Wi-ETiT, MSc ESE, MSc CE

## Grade bonus compliant to §25 (2)

1 Teaching content
Design of large electric generators: Special cooling methods with air, hydrogen and water, loss evaluation, especially eddy current losses, and measures to reduce the additional losses. Design of big hydrogenerators up to 800 MVA and turbo generators up to 2000 MVA with design examples. Application of power electronics in large variable speed drives with synchronous motors: Synchronous converter and cyclo-converter. Numerous photographs to illustrate applications, excursion with students to special firms or plants.

2 Learning objectives
Upon completion of the module, students will have developed an understanding of the design of cooling systems, design principles and operating characteristics of large generators and drives.

3 Recommended prerequisites for participation
Physics, Electrical Machines and Drives, Electrical Power Engineering

4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 60 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module
MSc EPE, MSc ETiT, MSc MEC, MSc WI-ETiT

8 Grade bonus compliant to §25 (2)

Module name
High Voltage Switchgear and Substations

Module nr.
18-kc-2020

Credit points
3 CP

Workload
90 h

Self-study
60 h

Module duration
1 Term

Module cycle
Summer term

Language
German

Module owner
Prof. Dr. Claus Neumann

Teaching content
This lecture covers the basic designs of high voltage substations as well as the design and working principles of high voltage switchgear:
• Switching processes and stresses induced by switching
• Arc behaviour in air, SF6 and vacuum
• Types of switchgear: earthing switches, disconnectors and circuit breakers
• Design and working principles of earthing switches and disconnectors in air and SF6
• Design and working principles of circuit breakers: vacuum breakers, pressured air and SF6 breakers (thermal blast and self-blast chambers)
• Stresses on earthing switches and disconnectors in the event of short circuit
• Testing of switchgear
• Reliability of switchgear
• Future developments: Intelligent control of switchgear, static switches, superconducting switchgear

Learning objectives
The student should understand the purpose and working principles of high voltage switchgear as well as their usage in high voltage substations.

Recommended prerequisites for participation
Prior attendance of the lectures High Voltage Technology I and II is recommended.

Form of examination
Module exam:
• Module exam (Technical examination, Oral examination, Duration: 45 Min., Default RS)

Prerequisite for the award of credit points
Passing the final module examination

Grading
Module exam:
• Module exam (Technical examination, Oral examination, Weighting: 100 %)

Usability of the module
MSc etit, BSc/MSc iST, MSc Wi-etit, MSc ESE

Grade bonus compliant to §25 (2)

References
A script of the lecture (in German) and the lecture slides will be provided.

### 1 Teaching content
Layered Dielectrics, Methods of Field Control and Potential Control, Breakdown in Gases (air and SF6), Breakdown in Vacuum, Surface Discharges, Lightnings and Lightning Protection, Travelling Waves on Conductors; Excursion to a substation

### 2 Learning objectives
After successful completion of the module, the students are able to optimize insulation systems by choice of the dielectrics, by capacitive, refractive or resistive internal grading systems or by external geometrical/capacitive grading elements; they have understood why equipment is designed as it is and how and where it can or has to be optimized if requirements from service are changing; they have understood the physical phenomena behind the dielectric breakdown of gases and do know which are the main influencing parameters; they know the effect of strongly inhomogeneous electrode configurations and of extremely large gaps; they know the time dependencies of a dielectric breakdown and their impact on dielectric strength under impulse voltage stress; they are able to identify critical surface discharge configurations, know about the problems under severe external pollution of insulators and how to solve them; they are thus qualified to predict the dielectric strength of any electrode configuration under any kind of voltage stress and to design a particular required dielectric strength of equipment; they are particularly enabled to realize the demands of emerging UHV systems and to manage them; they have understood the mechanism of thunderstorms and lightning flashes and are able to derive protective measures for buildings, substations and overhead lines; they are skilled to calculate travelling wave effects and their effect on fast-front overvoltages and to develop adequate countermeasures.

### 3 Recommended prerequisites for participation
High Voltage Technology I

1 Teaching content
Goal: The application of new technologies, i.e. super conduction, magnetic levitation techniques and magneto-hydrodynamic converter principles, are introduced to the students. The physical operation mode in principle, implemented prototypes and the current state of the development are described in detail.

Content:
Application of the superconductors for electrical energy converters:
- rotating electrical machines (motors and generators),
- solenoid coils for the fusion research,
- locomotive- and railway transformers,
- magnetic bearings.

Active magnetic bearings ("magnetic levitation"):
- basics of the magnetic levitation technique,
- magnetic bearings for high speed drives in kW to MW range,
- application for high-speed trains with linear drives.

Magneto-hydrodynamic energy conversion:
- physical principle,
- state of the art and perspectives.

Fusion research:
- magnetic field arrangements for contactless plasma inclusion,
- state of the current research.

2 Learning objectives
After completion of the module students have basic knowledge of application of superconductivity in energy systems as well as magnetic levitation, magneto-hydrodynamics and fusion technology.

3 Recommended prerequisites for participation
Physics, Electrical Machines and Drives, Electrical Power Engineering

4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 60 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module
MSc EPE, MSc ETiT, MSc MEC, MSc WI-ETiT

1 Teaching content
Introduction to Finite Element Method (FEM), Basic examples of electromagnetic devices designed in 2D with FEM, 2D electromagnetic Design of transformers, AC machines, permanent magnet devices; eddy current applications such as squirrel-cage machines (Example: Wind generator); Cooling systems and thermal design: Calculation of temperature distribution within power devices

2 Learning objectives
Upon completion of the module, students will have a good knowledge in applying FEMAG and ANSYS software package to basic field problems.

3 Recommended prerequisites for participation
Strongly recommended is the attendance of lecture and active co-operation in the tutorial "Energy Converters - CAD and System Dynamics"

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation and/or Colloquium. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:

1 Teaching content

The analysis and interpretation of data becomes ever more important, also for engineers. Digitalization and Smart Grids are terms to describe a host of novel data-based services in the field of generation, distribution, consumption, and marketing of (renewable) energy. The lecture presents the recent developments and their underlying machine learning methods.

For a start we describe the different problem settings of machine learning methods, review recent developments in the field, and evaluate the impact of machine learning on the energy sector. After such an introductory overview, we review the basics of linear algebra and numerical optimization. We then introduce supervised learning problems and study different model classes to solve such problems (linear models, trees, random forests, nearest neighbor, kernel methods, deep learning). We then turn to a probabilistic view and study unsupervised learning problems. Finally, we give an introduction to probabilistic graphical models. Throughout the semester we discuss exemplary applications of machine learning in the energy domain (e.g. renewable forecasting, predictive maintenance, state estimation, probabilistic load flow).

Practical exercises with Python deepen the understanding and support students’ actively usable skills.

2 Learning objectives

Students understand important machine learning problem settings and some key methods for each task. They know common applications thereof in the energy domain. Moreover, the students are able to apply and adapt those methods independently to new applications (not only from the energy domain).

3 Recommended prerequisites for participation

- Good knowledge of linear algebra required
- Basic knowledge of statistics and numerical optimization will be helpful
- Using Python for programming the practical examples should pose no difficulty

4 Form of examination

Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)

The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 8 students register, the examination will be an oral examination (duration: 25 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

MSc etit, MSc iST, MSc Wi-etit, MSc CE

8 Grade bonus compliant to §25 (2)

Notenverbesserungen bis zu 0,4 nach APB 25(2) durch Bonus für regelmäßig besuchte Übungs-/Praktikumstermine und mindestens einmaliges Vorrechnen in den Übungen

### 1 Teaching content
The basics of electrical railway traction systems as well as the generation and distribution of electrical power for rail systems will be presented. This includes:
- Mechanics of traction
- Electrical part of traction vehicles
- Converter and motors for electrical traction
- Monitoring systems
- Comparison of different power supply systems
- DC- and AC- systems for light- and heavy rail
- Problems of earthing and earth return currents
- Sub stations, converters, power plants

### 2 Learning objectives
After completing the module, students will have developed an understanding of the basic concepts of electric traction units and electric traction current systems.

### 3 Recommended prerequisites for participation
Basic knowledge in electrical machines and drives

### 4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)
The examination takes place in form of a written exam (duration: 90 minutes) in combination with a presentation.

### 5 Prerequisite for the award of credit points
Passing the final module examination

### 6 Grading
Module exam:

Prof. Dr.-Ing. Herbert De Gersem

1 Teaching content
- Basics of electric machine theory
- Classification of electric machine types
- Basic principles of electric machine modelling and simulation
- Embedding material models
- Geometry approximation and field modelling
- Field-circuit coupling and transient simulation
- Finite elements for multiphysics
- Optimization methods
- Simulation environments
- Laboratory measurements on electric machines

2 Learning objectives
The students get acquainted with modern techniques for modelling, simulating and optimizing electric machines. They know the strengths and weaknesses of available design tools and are able to critically assess simulation results. They consider electromagnetic fields and their coupling to structural, thermo- and fluidodynamics. They are able to specify the virtual prototyping problem, choose the appropriate simulation tools, set up the models, and eventually solve the problems, including application of modern optimization techniques.

3 Recommended prerequisites for participation
Basics of field and circuit simulation, electromagnetic field theory, basics of partial differential equations and linear algebra.

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Default RS)
The grade consists of a report and a presentation followed by a question and answer session.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

### 1 Teaching content
Medical Image Data; Image Processing; Medical Visualization with VTK; Indirect Volume Visualization; Direct Volume Visualization; Transfer Functions; Interactive Volume Visualization; Illustrative Rendering; Example: Visualization of Tensor Image Data; Example: Visualization of Tree Structures; Example: Virtual Endoscopy; Image-guided Surgery

### 2 Learning objectives
After successfully attending the course, students are familiar with volume visualization techniques. They understand the necessity of image enhancement for the visualization. They can use the "Visualization Toolkit" (VTK) to apply the techniques to implement computing systems for the visualization of medical image data for diagnosis, planning and therapy.

### 3 Recommended prerequisites for participation
Useful but not mandatory: GDV I, (Medical) Image processing

### 4 Form of examination
Course related exam:
- [20-00-0467-iv] (Technical examination, Oral/written examination, Default RS)

### 5 Prerequisite for the award of credit points
Pass exam (100%)

### 6 Grading
Course related exam:

1. **Teaching content**
   Extent and Meaning of electrical measurement technology, units and measurement systems, description of measurement systems and signals, systematic and stochastic errors, relative and reduced errors, measurement uncertainty, analogue measurement of electrical parameter, power measurement in single- and three-phase systems, impedance measurements, use of oscilloscopes, measurement amplifier and filter, signal conversion (ADC, DAC), frequency and time measurements, data handling, digital data acquisition.

2. **Learning objectives**
   Students know the configuration and properties of electric and electronic measurement equipment and circuits and are able to apply them to measurement tasks. They know the basics of data acquisition, handling, transmission and storage and are able to describe and quantify measurement errors.

3. **Recommended prerequisites for participation**
   ETIT I & II, Mathematics I-III

1 Teaching content

- Measuring signals in the time domain using digital storage oscilloscopes, trigger constraints
- Measuring signals in the frequency domain using digital storage oscilloscopes, measuring errors (aliasing/under sampling, leakage) and window functions
- Measuring mechanical quantities with appropriate sensors, sensor electronics/amplifier circuits
- Computer-based measurements and ultrasound sensors
- Read and process sensor signals and control an automated process using a programmable logic controller (PLC)
- First experiments with robotic and medical robots for insertion of needles

2 Learning objectives

After having successfully completed the course participants are familiar with the use of measuring devices, sensors and electronics. They know about restrictions and possible measuring errors. Also, participants enhance their knowledge of time- and frequency-domain and the connections between both by the oscilloscope measurements. Regarding methodical skills participants are able to record measurement results during laboratory work and to interpret the measured data afterwards.

3 Recommended prerequisites for participation

Electrical Engineering and Information Technology I and II

4 Form of examination

Module exam:
- Module exam (Study achievement, Oral/written examination, p/np RS)

The examination has the form of a Report (including submission of programming code) and/or a Presentation and/or an Oral examination and/or a Colloquium (testate). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module

BSc ETiT, BSc MEC, BSc CE, BSc WI-ETiT

8 Grade bonus compliant to §25 (2)

Module owner
Prof. Dr. Bernt Schiele

1 Teaching content
- Participants independently familiarize themselves with a chosen seminar topic by working with the provided initial scientific papers (usually English-language texts)
- Deeper and/or wider library research originating from the initially provided papers
- Critical discussion of the provided topic
- Preparation of a presentation (written text and slides) about the topic
- Giving a talk in front of a heterogenous (mixed prior knowledge) audience
- Interactive discussion after the presentation
- Medical application areas include oncology, orthopedics and navigated surgery.
Learning about methods related to medical image processing: segmentation, registration, visualization, simulation, navigation, tracking and others.

2 Learning objectives
Successful participation in the course enables students to become acquainted with an unfamiliar topic by working with scientific papers. They recognize the essential aspects of the examined works and are able to concisely present them to an audience with mixed prior knowledge on the subject. They apply a number of presentation techniques in the process. The students are able to actively guide and participate in a scientific discussion on the presented topic.

3 Recommended prerequisites for participation
Bachelor from 4. Semester or Master students.

4 Form of examination
Course related exam:
- [20-00-0468-se] (Study achievement, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

1 Teaching content
Students are able to explain the structure and function of microsystems for common applications (e.g. pressure sensors, accelerometers, biological and chemical sensors, micro-optical systems), calculate design parameters to achieve given specifications, and to judge the impact of scaling on the device performance. They can select appropriate materials, devise basic fabrication process flows, and identify compatibility issues between processes and/or materials.

Prof. Dr. Mario Kupnik

1 Teaching content
The module teaches basic principles of different sensors and the required knowledge for correct application of sensors. With regard to the measurement chain, the focus of the course is on the conversion of any, generally non-electrical quantities into electrically evaluable signals. Resistive, capacitive, inductive, piezoelectric, optical, and magnetic measurement principles are covered in the module to provide knowledge of the measurement of important quantities such as force, torque pressure, acceleration, velocity, displacement, and flow. In addition to a phenomenological description of the principles and a derived technical description, the main elements of primary and secondary electronics for each measurement principle will also be presented and understood. In addition to the measurement principles, the description of errors will be dealt with. In addition to static and dynamic errors, errors in signal processing and error consideration of the entire measurement chain will be discussed. In the exercises the method of peer instruction is utilized.

2 Learning objectives
The students acquire knowledge of the different measuring methods and their advantages and disadvantages. They can understand error in data sheets and descriptions interpret in relation to the application and are thus able to select a suitable sensor for applications in electronics and information, as well process technology and to apply them correctly.

3 Recommended prerequisites for participation
Measuring Technique

4 Form of examination
Module exam:

Prof. Dr.-Ing. Christoph Hoog Antink

1 Teaching content
Within this module, students will work independently in small groups on a given problem from the realm of artificial intelligence (AI) in medicine. The nature of the problem can be the automatic classification or prediction of a disease from medical signals or data, the extraction of a physiological parameter, etc. All groups will be given the same problem but will have to develop their own algorithms, which will be evaluated on a hidden dataset. In the end, a ranking of the best-performing algorithms is provided.

2 Learning objectives
Students can independently apply current AI / machine learning methods to solve medical problems. They have successfully independently developed, optimized and tested code that has withstood external evaluation. Graduates are enabled to apply methodological competencies, such as teamwork, in everyday professional life.

3 Recommended prerequisites for participation
- Basic programming skills in Python
- 18-zo-1030 Fundamentals of Signal Processing

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS) Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

Prof. Dr. habil. Torsten Frosch

1 Teaching content
This module is based on practical work on current, promising and trend-setting topics in biophotonics. We focus on applications of optical spectroscopy and microscopy in medical technology. Students will gain a deeper insight into practical work with lasers, optics, spectrometers, microscopes, etc. Participation in current research projects are possible, depending on the number of participants. The experimental results are evaluated using advanced techniques and methods of data processing and statistics and are documented in reports following scientific standards.

2 Learning objectives
After successful completion of this module, students will be able to analyze and evaluate biophotonic methods and techniques. In addition, they have learned to plan and implement their own projects independently and collaborate in teams. They are able to apply experimental skills and advanced techniques and methods of data analysis. Depending on the task, students learn to independently analyze, improve, or build up optical setups from scratch. In addition, it is possible to program software for controlling devices and to analyze medically relevant samples. Furthermore, the measurement results are evaluated, presented, and interpreted in a scientific context. With the gained knowledge, students are able to critically analyze existing setups or instruments and develop their own approaches. In addition, students gain experience in preparing written reports according to scientific standards. They also practice presenting their work results to a professional or lay audience.

3 Recommended prerequisites for participation
Module Basics of Optics for Biomedical Engineering

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

1 Teaching content
Fuzzy systems: basics, rule based fuzzy logic, design methods, decision making, fuzzy control, pattern recognition, diagnosis; Neural networks: basics, multilayer perceptrons, radial basis functions, pattern recognition, identification, control, interpolation and approximation, Neuro-fuzzy: optimization of fuzzy systems, data driven rule generation; Evolutionary algorithms: optimization problems, evolutionary strategies and their applications, genetic programming and its applications.

2 Learning objectives
After attending the module, a student is capable of:
- recalling the elements and set-up of standardized fuzzy-logic, neural networks and evolutionary algorithms,
- discussing the pros and cons of certain set-ups of systems from computational intelligence for solving a given problem,
- recognizing situations in which tools taken from computational intelligence can be applied for problem solving,
- creating programs from algorithms taught in the lecture, and
- extending the learned standard procedures in order to solve new problems.

1 **Teaching content**
Within this module, students work independently in small project teams on individual tasks from the field of systems of biomedical engineering. The focus is on the development of systems consisting of hardware and software, e.g. for automated diagnosis or therapy.

2 **Learning objectives**
After completing the module, students will be able to independently abstract the technical requirements for a system in the area of biomedical engineering (e.g. for measuring and evaluating or simulating a physiological process). They can independently derive sub-projects from these requirements and create time schedules. They have successfully developed, optimized and tested a system comprising e.g. hardware and software. Graduates are enabled to apply methodological competencies, such as teamwork, in their everyday professional life.

3 **Recommended prerequisites for participation**
Interest in working independently on hardware and software

4 **Form of examination**
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

5 **Prerequisite for the award of credit points**
Passing the final module examination

6 **Grading**
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**
MSc MedTec, BSc/MSc iST

8 **Grade bonus compliant to §25 (2)**

1 Teaching content
theory of biological evolution, introduction to genetics, population genetics, population growth, evolutionary algorithms, applications, DNA computing, artificial life, theory of evolutionary algorithms, optimization algorithms, multi-objective optimization, meta models, co-evolution, genetic coding, representations of evolutionary algorithms, developmental processes, self-adaptation

2 Learning objectives
After attending the module, a student is capable of:

1. understanding the basic principles of evolutionary biology on a systems level,
2. transferring this knowledge to the technical domain (evolutionary algorithms),
3. applying evolutionary algorithms to hard optimization problems,
4. gaining insight into the potentials and challenges of interdisciplinary research (natural and engineering/computer science).

3 Recommended prerequisites for participation
Introductory courses mathematics. Basic computer skills.

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading

### 1 Teaching content
The International Genetically Engineered Machine (IGEM) competition is a yearly international student competition in the domain of synthetic biology, initiated and hosted by the Massachusetts Institute of Technology (MIT), USA since 2004. In the past years teams from TU Darmstadt participated and were very successful in the competition. This seminar provides training for students and prospective IGEM team members in the domain of computational modeling of biomolecular circuits. The seminar aims at computationally inclined students from all background, but in particular from electrical engineering, computer science, physics and mathematics. Seminar participants that are interested to become IGEM team members could later team up with biologists and biochemists for the 2017 IGEM project of TU Darmstadt and be responsible for the computational modeling part of the project.

The seminar will cover basic modeling approaches but will focus on discussing and presenting recent high-impact synthetic biology research results and past IGEM projects in the domain of computational modeling.

### 2 Learning objectives
Students that successfully passed that seminar should be able to perform practical modeling of biomolecular circuits that are based on transcriptional and translational control mechanisms of gene expression as used in synthetic biology. This relies on the understanding of the following topics:

- Differential equation models of biomolecular processes
- Markov chain models of biomolecular processes
- Use of computational tools for the composition of genetic parts into circuits
- Calibration methods of computational models from experimental measurement
- Use of bioinformatics and database tools to select well-characterized genetic parts

### 3 Recommended prerequisites for participation

### 4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)

Report and/or Presentation and/or Colloquium. The type of examination will be announced in the beginning of the lecture.

### 5 Prerequisite for the award of credit points
Passing the final module examination

### 6 Grading
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

### 7 Usability of the module
BSc etit, MSc etit

### 8 Grade bonus compliant to §25 (2)

Teaching content
Signal detection and parameter estimation are fundamental signal processing tasks. In fact, they appear in many common engineering operations under a variety of names. In this course, the theory behind detection and estimation will be presented, allowing a better understanding of how (and why) to design “good” detection and estimation schemes.

These lectures will cover:
- Fundamentals of Detection and Estimation Theory
- Hypothesis Testing:
  - Bayesian/Ideal Observer/Neyman-Pearson Tests
  - Receiver Operating Characteristics
  - Uniformly Most Powerful Tests
  - Matched Filter
- Estimation Theory:
  - Types of Estimators
  - Maximum Likelihood Estimators
  - Sufficiency and the Fisher-Neyman/Factorisation Criterion
  - Unbiasedness and minimum variance
  - Fisher Information and the CRB
  - Asymptotic properties of the MLE

Learning objectives
After successful completion of the module, students know the basics of detection and estimation theory. They can design hypothesis tests and estimators for existing problems and implement them in Matlab on their own. In addition, students will be able to review existing work on detection and estimation independently. They can adequately present the methods and results from existing publications and discuss them scientifically.

Recommended prerequisites for participation
DSP, general interest in signal processing

Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation and/or Colloquium. The type of examination will be announced in the beginning of the lecture.

Prerequisite for the award of credit points
Passing the final module examination

Grading
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

Usability of the module
MSc ETiT, MSc iST, MSc iCE, Wi-ETiT

Grade bonus compliant to §25 (2)

Language: German
Module owner: Prof. Dr. Georgios Sakas

1 Teaching content
- Participants independently familiarize themselves with a chosen seminar topic by working with the provided initial scientific papers (usually English-language texts)
- Deeper and/or wider library research originating from the initially provided papers
- Critical discussion of the provided topic
- Preparation of a presentation (written text and slides) about the topic
- Giving a talk in front of a heterogenous (mixed prior knowledge) audience
- Interactive discussion after the presentation

Learning about methods related to planning and navigation are: segmentation, registration, visualization, simulation, navigation, tracking and others.

2 Learning objectives
Successful participation in the course enables students to become acquainted with an unfamiliar topic by working with scientific papers. They recognize the essential aspects of the examined works and are able to concisely present them to an audience with mixed prior knowledge on the subject. They apply a number of presentation techniques in the process. The students are able to actively guide and participate in a scientific discussion on the presented topic.

3 Recommended prerequisites for participation
Bachelors: >=4th semester
Masters: >=1st semester

4 Form of examination
Course related exam:
- [20-00-0677-se] (Study achievement, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

Prof. Dr. Bernt Schiele

1 Teaching content
The lecture consists of two parts. The first half of the lecture describes how devices that yield medical image data (CT, NMR, PET, SPECT, Ultrasound) work. The second half of the lecture covers various image processing techniques that are typically applied to medical images.

2 Learning objectives
After successfully completing the course, students have an overview over the mechanisms used in and the abilities of modern medical image processing techniques. They are able to solve basic to medium level problems in medical image processing.

3 Recommended prerequisites for participation
Basics within Mathematics are highly recommended. Participation in lecture "Bildverarbeitung".

4 Form of examination
Course related exam:

## 1 Teaching content
Generative Models, Implicit and Explicit Models, Maximum Likelihood, Variational AutoEncoders, Generative Adversarial networks, Numerical Optimization for Generative models, Applications in medical Imaging

## 2 Learning objectives
After students have attended the module, they can
- Explain the structure and operation of Deep Generative Models (DGM)
- Critically scrutinize scientific publications on the topic of DGMs and thus assess them professionally
- independently construct / implement basic DTM in a high-level programming language designed for this purpose
- Transfer the implementation and application of DTM to different applications

## 3 Recommended prerequisites for participation
- Python Programming
- Linear Algebra
- Image Processing/Computer Vision I
- Statistical Machine Learning

## 4 Form of examination
Course related exam:
- [20-00-1035-iv] (Technical examination, Oral/written examination, Default RS)

## 5 Prerequisite for the award of credit points
Pass exam (100%)

## 6 Grading

### 1 Teaching content
Review of the fundamentals of optics, laser technology, light-matter interaction, and spectroscopic systems, covering medical applications such as photodynamic therapy and optical heart rate measurement etc.; spectroscopy and imaging with linear optical processes: IR absorption, Raman spectroscopy, with applications e.g. in breath analysis, drug quality control, as well as detection of biomarkers; laser microscopy, e.g. wide-field microscopy, Raman microscopy and chemical imaging, fluorescence microscopy, with applications e.g. in neurostimulation research; spectroscopy and imaging with nonlinear optical processes: fundamentals of nonlinear optics, multi-photon fluorescence, e.g., with application for in vivo imaging of the brain, coherent nonlinear optical processes such as SHG and CARS, multimodal imaging, e.g. with potential application in intra-operative tumor imaging.

### 2 Learning objectives
Students get to know established and state of the art biophotonic systems in medical technology and understand the underlying concepts. They are familiar with linear and nonlinear optical processes of light-matter interaction and understand the principles of spectroscopy and microscopy based on them. With the help of the gained knowledge, the students will be able to evaluate and compare common biophotonic methods and instruments. Furthermore, they will be able to recommend appropriate techniques and methods for a particular application.

### 3 Recommended prerequisites for participation
Physics for Electrical Engineering and Mathematics I (Electrical Engineering)

### 4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

### 5 Prerequisite for the award of credit points
Passing the final module examination

Language
German

Module owner
Prof. Dr.-Ing. Christoph Hoog Antink

1 Teaching content

- Introduction, terms and delimitations
- Data acquisition and preprocessing
- Feature extraction and visualization methods
- Statistical fundamentals
- Classification methods
  - Linear Regression, Logistic Regression
  - Support Vector Machines
  - Decision Trees, Random Forest, XGBoost
  - Neural Networks
- Overfitting and underfitting with medical data
- Influence of unbalanced data sets
- Evaluation of algorithms
- "Explainable AI"
- Regulatory Requirements

2 Learning objectives

Students have a basic understanding of the terminology of Artificial Intelligence, especially in the medical context. They have learned how features can be extracted from medical data and visualized. The students have an overview of current procedures and know how they work. They are familiar with current application examples from various subfields of medical technology, e.g. signal processing, image processing, spectroscopy, gene sequencing, etc. Students understand the dangers of underfitting, overfitting, and imbalanced (e.g. related to gender ratio) data sets in a medical context. They are aware of the social and ethical responsibility of their future professional activities in relation to Fair AI. Students have an advanced understanding of algorithm evaluation, are familiar with the concept of "Explainable AI" and know the basic regulatory requirements for medical software. They are able to independently develop AI-based solutions to medical technology problems.

3 Recommended prerequisites for participation
18-zo-1030 Fundamentals of Signal Processing

4 Form of examination

Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)

The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 21 students register, the examination will be an oral examination (duration: 20 min.).

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

MSc MedTec, BSc/MSc iST, MSc MEC

8 Grade bonus compliant to §25 (2)
By participating in online tests, a bonus can be acquired for the exam. The following key applies "points achieved at the end of the semester" → "grade improvement": 60% → 0.1; 65% → 0.2; 70% → 0.3; 75% → 0.4; ≥80% → 0.5. The bonus is converted into raw points, i.e. a bonus of 0.5 corresponds to half the points of a whole grade step (e.g. 3.0 to 2.0). Exam B must be passed without a bonus to receive the bonus. The total score is the points achieved + bonus points and is rounded.

Prof. Dr. techn. Heinz Köppl

1 Teaching content

- Biomolecular foundations of high-throughput measurement techniques (Microarrays, RNA-Seq, genome sequencing, protein arrays, mass-spectrometry, flow-cytometry, mass-cytometry, genomics, proteomics, metabolomics)
- Foundations of statistics and machine learning (decision theory, regression, classification and clustering)
- Exact substring search, dynamic programming, algorithms for sequence comparison (PAM, BLAST, BLAST2, etc), alignment of multiple sequences (ClustalW, DAlign, etc)
- Important databases in bioinformatics and their use in medicine and biology (GenBank, Gene Expression Omnibus, Rfam, UniProt, Pfam, KEGG, BRENDA, Pathway Commons)
- Analysis of interaction networks (modularity, graph partitioning, spanning trees, differential network analysis, network motifs, STRING database, PathBLAST)
- Introduction to structural biology, structure prediction for RNA and proteins, Protein Data Bank (PDB)

2 Learning objectives

After successful completion students are aware of frequently used high-throughput methods in molecular biology and are familiar with the resulting data format. They know the most important bioinformatics databases and acquired the necessary background to understand standard bioinformatics algorithms and to implement them from scratch in R or Matlab. Students are familiar with the basics of structural analysis and with structure prediction. With respect to communication skills, students learned to exchange information, ideas, problems and solutions related to bioinformatics with experts and with lay persons.

1 Teaching content
This course covers spatial representations and transformations, manipulator kinematics, vehicle kinematics, velocity kinematics, Jacobian matrix, robot dynamics, robot sensors and actuators, robot control, path planning, localization and navigation of mobile robots, robot autonomy and robot development.

Theoretical and practical assignments as well as programming tasks serve for deepening of the understanding of the course topics.

2 Learning objectives
After successful participation, students possess the basic technical knowledge and methodological skills necessary for fundamental investigations and engineering developments in robotics in the fields of modeling, kinematics, dynamics, control, path planning, navigation, perception and autonomy of robots.

3 Recommended prerequisites for participation
Recommended: basic mathematical knowledge and skills in linear algebra, multi-variable analysis and fundamentals of ordinary differential equations

1 Teaching content
Main topics covered are:

1. Root locus method (construction and application),
2. State space representation of linear systems (representation, time solution, controllability, observability, observer-based controller design)

2 Learning objectives
After attending the module, a student is capable of:

1. constructing and evaluating the root locus of given systems
2. describing the concept and importance of the state space for linear systems
3. defining controllability and observability for linear systems and being able to test given systems with respect to these properties
4. stating controller design methods using the state space, and applying them to given systems
5. applying the method of linearization to non-linear systems with respect to a given operating point

3 Recommended prerequisites for participation
System Dynamics and Control Systems I

1 Teaching content
In this lab tutorial, an introduction to the software tool MatLab/Simulink will be given. The lab is split into two parts. First the fundamentals of programming in Matlab are introduced and their application to different problems is trained. In addition, an introduction to the Control System Toolbox will be given. In the second part, the knowledge gained in the first part is applied to solve a control engineering specific problem with the software tools.

2 Learning objectives
Fundamentals in the handling of Matlab/Simulink and the application to control engineering tasks.

3 Recommended prerequisites for participation
The lab should be attended in parallel or after the lecture “System Dynamics and Control Systems I”

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

1 Teaching content
Using appropriate test benches the students apply controller design methods taught in the basic lecture of control systems. The priority hereby lies in the application of the design methods and the evaluation of the parameters they provide. Additionally, some further topics of the domain of control systems (e.g. automation engineering, data-driven modelling) are presented by practical Experiments.

2 Learning objectives
After completion of this module the students will be able to practically apply the modelling and design techniques for different dynamic systems presented in the module "System dynamics and control systems I" to real lab experiments and to bring them into operation at the lap setup.

3 Recommended prerequisites for participation
System Dynamics and Control Systems I

4 Form of examination
Module exam:
• Module exam (Study achievement, Oral/written examination, p/np RS)
Report (including submission of programming code) and/or Presentation and/or Oral examination (25 minutes) and/or Colloquium (testate), but never more than two out of it. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
• Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
BSc ETiT

8 Grade bonus compliant to §25 (2)

9 References
Lab handouts will be given to students.

1 Teaching content
- guided independent work on a concrete task from development and application of modern robotic systems and, as far as possible, as member of a team of developers
- becoming acquainted with the relevant state of research and technology
- development of a solution approach and its implementation
- application and evaluation based on robot experiments or simulations
- documentation of task, approach, implementation and results in a final report and conduction of a final presentation

2 Learning objectives
Through successful participation students acquire deepened knowledge in selected areas, subsystems and methods of modern robotic systems as well as in-depth skills for development, implementation, and experimental evaluation. They train presentation skills and, as far as possible, team work.

3 Recommended prerequisites for participation
- basic knowledge within Robotics as given in lecture “Grundlagen der Robotik”
- programming skills depending on task

4 Form of examination
Course related exam:
- [20-00-0324-pr] (Study achievement, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:

1 Teaching content
During the laboratory course the following experiments will be conducted: Coupling control of a helicopter, Non-linear control of a gyroscope, Nonlinear multivariable control of an aircraft, Servo control systems, Control of an overhead crane system, Programmable logic control of a stirring process

2 Learning objectives
After attending this module, a student is capable of:

1. recalling the basics of the conducted experiments,
2. organize and comprehend background information for experiments,
3. assemble experimental set-ups based on manuals,
4. judge the relevance of experimental results by comparing them with theoretically predicted outcomes,
5. present the results of the experiments

3 Recommended prerequisites for participation
System Dynamics and Control Systems II, the attendance of the additional lecture “System Dynamics and Control Systems III” is recommended

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)

Report (including submission of programming code) and/or Presentation and/or Oral examination (25 minutes) and/or Colloquium (testate), but never more than two out of it. The type of examination will be announced in the beginning of the lecture.

Module owner
Prof. Dr.-Ing. Gerd Griepentrog

1 Teaching content
Control structures for drives; Design of controllers for drives; VSIs for drives; Space Vectors as basis of modelling AC-machines; Reference frames for description of AC-machines; Control oriented block diagram for DC-drive; Structure and design of the controllers; Control oriented block diagram for Permanent Magnet Synchronous Machine (PMSM); Control oriented block diagram for Induction machine (IM); Torque control for AC-machines using linear or switching controllers. Field Oriented Control and Direct Torque Control for PMSM and IM. Models and observers for rotor flux of IM Speed control, including oscillatory load. Resolver and Encoder. Problem of Motion control

2 Learning objectives
Upon successful completion of the module, students will be able to:

1. develop the control-oriented block diagrams for the DC-machine operating in base speed range as well as in field weakening range.
2. design the control loops for 1.) concerning the structure and the control parameters.
3. Understand and apply space vectors and master their application in different rotating frames of reference.
4. Develop the dynamic equations of the permanent exited synchronous machine and the induction machine and to simplify these equations by help of suitable rotating reference frames and represent these equations as non-linear control-oriented block diagram.
5. Design the control loops according to 4.) especially the field-oriented control concerning the structure of the control loops and the control parameters.
6. Understand the deduction of equations given in the literature for machine types, which are not discussed in this lecture, e.g. for the doubly fed induction machine.
7. Derive the models and the observers for the rotor flux for the induction machine in different frames of reference and to apprise the benefits and drawbacks of the different solutions.
8. Design the control loops for the super-imposed speed controls even for mechanically oscillating loads.

3 Recommended prerequisites for participation
BSc ETiT or equivalent, especially Control Theory and Electrical Machines / Drives

4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

Module owner
Prof. Dr.-Ing. Rolf Findeisen

1 Teaching content
The lab is split into the two parts Simulink and Control Engineering II. First the fundamentals of the simulation tool Simulink are introduced and their application to problems from different fields of application is trained. In the second part, the knowledge gained in the first part is applied to autonomously solve several control design problems as well as simulation tasks.

2 Learning objectives
The students will be able to work with the tool MatLab/Simulink on their own and can solve tasks from the areas of control engineering and numerical simulation. The students will know the different design methods of the control system toolbox and the fundamental concepts of the simulation tool Simulink. They can practically apply the knowledge gathered in the lectures “System Dynamics and Control Systems I and II” and “Modelling and Simulation”.

3 Recommended prerequisites for participation
The lab should be attended in parallel or after the lectures “System Dynamics and Control Systems II” and “Modelling and Simulation”.

4 Form of examination
Module exam:
• Module exam (Study achievement, Oral/written examination, Default RS)
Report (including submission of programming code) and/or Presentation and/or Oral examination (25 minutes) and/or Colloquium (testate), but never more than two out of it. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

Module owner
Prof. Dr.-Ing. Rolf Findeisen

Teaching content
- Basics (MIMO systems, SVD, system norms)
- Controller design for multivariable systems
- H2 and H8 Control design in the frequency domain
- Robust Control (uncertainty description, robustness analysis, robust controller design)

Learning objectives
The students are able to formulate, analyse, and design controllers for multivariable systems. They are able to express control tasks as H2 and H8 optimization problems, to represent uncertainties of a system in a suitable form and to design a controller which ensures robust stability and robust performance.

Recommended prerequisites for participation
System Dynamics and Automatic Control Systems I and II

Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)
The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 25 students register, the examination will be an oral examination (duration: 25 min.). The type of examination will be announced in the beginning of the lecture.

Prerequisite for the award of credit points
Passing the final module examination

Grading
Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

Usability of the module

Grade bonus compliant to §25 (2)

Prof. Dr.-Ing. Rolf Findeisen

Teaching content
Physics-based modeling, modeling of distributed parameter systems, model simplification, linearization, model reduction, numerical integration methods, static and dynamic optimization, parameter optimization, data-driven modeling, machine learning supported modeling.

Learning objectives
The students are familiar with different modeling approaches for dynamical systems and can apply those to various fields of applications. They acquire the ability to simulate the dynamical behavior of the modeled systems. They can select and use suitable integration methods. They can perform a model reduction and decompose dynamical systems. They acquire the fundamental knowledge of static and dynamic optimization of systems. They obtain a perspective on data-driven and machine learning supported modeling.

Recommended prerequisites for participation
Basic concepts of control theory. Fundamentals of linear algebra.

Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 120 Min., Default RS)

The examination takes place in form of a written exam (duration: 120 minutes). If one can estimate that less than 25 students register, the examination will be an oral examination (duration: 25 min.). The type of examination will be announced in the beginning of the lecture.

Prerequisite for the award of credit points
Passing the final module examination

1 Teaching content
Topics covered are:
1. basic properties of non-linear systems,
2. limit cycles and stability criteria,
3. non-linear control of linear systems,
4. non-linear control of non-linear systems,
5. observer design for non-linear systems

2 Learning objectives
After attending the module, a student is capable of:
1. explaining the fundamental differences between linear and non-linear systems,
2. testing non-linear systems for limit cycles,
3. stating different definitions of stability and testing the stability of equilibria,
4. recalling the pros and cons of non-linear controllers for linear systems,
5. recalling and applying different techniques for controller design for non-linear systems,
6. designing observers for non-linear systems

3 Recommended prerequisites for participation

1 Teaching content
Teams of 2 - 4 students work on different control engineering projects under the guidance of a project coordinator from the institute. The projects mainly cover the following subject areas:
- Modelling, analysis and design of multivariable control systems
- Modelling, analysis and design of distributed parameter systems
- Robust control design
- System analysis, supervision and fault diagnosis
- Modelling and identification
Application areas are machine tools, production lines, test benches, process control, automobiles.

2 Learning objectives
After completing of this module the students will be familiar with the individual steps of investigating a control engineering project. This includes in particular the compilation of a system specification as well as critical discussions and systematic selection of appropriate control engineering solutions and their real technical implementation. Doing so the students learn the practical application of control engineering methods taught in the module “System Dynamics and Control Systems I” to real world problems. Additionally, in this module the students are supposed to improve their professional skills. These skills include e.g. teamwork, presentation techniques and systematic information retrieval.

3 Recommended prerequisites for participation
Lecture “System Dynamics and Control Systems I”

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
- Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:

1 Teaching content
The following topics are taught in the lecture:

**Industrial robots**

1. Types and applications
2. Geometry and kinematics
3. Dynamic model
4. Control of industrial robots

**Mobile robots**

1. Types and applications
2. Sensors
3. Environmental maps and map building
4. Trajectory planning

Group projects are arranged in parallel to the lectures in order to apply the taught material in practical exercises.

2 Learning objectives
Upon successful completion of the module, students are capable of:

1. recalling the basic elements of industrial robots,
2. recalling the dynamic equations of industrial robots and be able to apply them to describe the dynamics of a given robot,
3. stating model problems and solutions to standard problems in mobile robotics,
4. planning a small project,
5. organizing the work load in a project team,
6. searching for additional background information on a given project,
7. creating ideas on how to solve problems arising in the project,
8. writing a scientific report about the outcome of the project,
9. presenting the results of the project.

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)

1 Teaching content
The purpose of this laboratory is gaining extended knowledge about realization and behaviour of drive systems.
An introduction in measurement problems concerning drives is given. The contents of the laboratory is setting drives to work and investigating drive systems under laboratory conditions. Special attention is paid to inverter-fed AC drives. The laboratory experiments are individually coordinated with the previous knowledge of the respective courses (ETiT or MEC).

2 Learning objectives
The students get the ability of measurement for electrical motors, generators and transformers.

3 Recommended prerequisites for participation
Bachelor of Science in Electrical Engineering, Power Engineering or similar

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report (including submission of programming code) and/or Presentation and/or Oral examination (25 minutes) and/or Colloquium (testate), but never more than two out of it. The type of examination will be announced in the beginning of the lecture.

Module owner
Prof. Dr.-Ing. Rolf Findeisen

1 Teaching content
Description and classification of dynamic systems; Linearization around an equilibrium point; Stability of dynamic systems; Frequency response; Linear time-invariant closed-loop systems; Controller design; Control structure optimization

2 Learning objectives
Students will know how to describe and classify different dynamic systems. They will be able to analyse the dynamic behaviour in time and frequency domain. The students will be able to design controllers for linear time invariant systems.

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module

8 Grade bonus compliant to §25 (2)

Module owner
Prof. Dr. Mario Kupnik

1 Teaching content
The module includes theoretical discussion and practical application of the measuring chain in detail on example the electrical variables (current, voltage, impedance, power) and selected non-electrical variables (frequency, time, force, pressure and acceleration).
In the lecture the following chapter will be thematically treated measuring signals and measuring equipment (oscilloscope, laboratory testing equipment), static measurement error and disturbance variables (especially temperature), basic measurement circuits, AD conversion principles and filtering, measurement method non-electrical variables and the statistics of measurements (distributions, statistic safe tests).
The topics of the lecture are discussed in the exercise of the module. Examples are analyzed and their application in measurement scenarios are practiced.
The practicum of the module consists of five experiments which are time closely matched in time to the lecture:
- Measuring of signals in the time range with digital storage oscilloscope, trigger conditions
- Measuring of signals in the frequency range with digital storage oscilloscope, error of measurement (aliasing / subsampling, leakage) and window functions
- Measuring of mechanical dimensions with suitable primary sensors, sensor electronics / amplifier circuits
- Computer-based measuring
- Importing of sensor signals, whose processing and the resulting automated control of a process using a programmable logic controller (PLC)

2 Learning objectives
The students know the structure of the measuring chain and the specific properties of the corresponding elements. They know the structure of electronic measuring instruments and basic measuring circuits for electrical and selected non-electrical variables and can apply them. They know the basics of capturing, processing, transferring and storage of measurement data and can describe error sources and quantifying their influences.
In the practicum, the students deepen the basis of the measurements with the oscilloscope, the understanding of the relationship between time and frequency range. Methodically they are able to document and evaluate the data during laboratory measuring.

3 Recommended prerequisites for participation
Basics of EIT I-III, Math I-III, Electronic

4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)
Course related exam:
- [18-kn-1011-pr] (Study achievement, Optional, Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:

German

## Module owner
Prof. Dr. Mario Kupnik

## Teaching content
Structure and design methods of electromechanical systems, mechanical, acoustical and thermal networks, transducers between mechanical and acoustical networks. Design and devices of electromechanical transducers.

## Learning objectives
The module provides the following competencies upon successful completion: Comprehension, description, calculation and application of the most relevant electromechanical transducers, comprising electrostatic transducer (e.g. microphone and accelerometer), piezoelectric transducers (e.g micro motors, micro sensors), electrodynamic transducer (loudspeaker, shaker), piezomagnetic transducer (e.g. ultrasonic source). Design of complex electromechanical systems like sensors and actuators and their applications by applying the discrete element network method.

## Recommended prerequisites for participation
Electrical Engineering and Information Technology I

## Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

Module owner
Prof. Dr.-Ing. Herbert De Gersem

Teaching content
Vector calculus, orthogonal coordinate systems, Maxwell's equations, interface and boundary conditions, layered media, electrostatics, scalar potential, Coulomb integral, separation of variables, method of image charges, magnetostatics, vector potential, Biot-Savart law, stationary current fields, fields in matter, energy flow, skin effect, plane waves, polarization, TEM waves, reflection and multi-layer problems, multi conductor transmission lines (capacitance, inductance, and conductance matrix), velocity definitions, basics of rectangular waveguides.

Learning objectives
Students will be familiar with Maxwell's equations in integral and differential form for static and dynamic field problems. They will have a mental picture of wave phenomena in free space. They are able to recognize and interpret wave effects in the different areas of electrical engineering. They are able to derive the wave effects from Maxwell's equations and have a good understanding of the necessary mathematical tools.

Recommended prerequisites for participation
Lecture notes. Further literature recommendations are given in the course.

Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 120 Min., Default RS)

Prerequisite for the award of credit points
Passing the final module examination

Grading
Module exam:
- Module exam (Technical examination, Examination, Weighting: 100 %)

Usability of the module
BSc ETiT, BSc Wi-ETiT

Grade bonus compliant to §25 (2)
Improvement by up to 0.4 due to bonus points which can be acquired by means of e-learning online tests.

References
Lecture notes. Further literature recommendations are given in the course.

Module owner
Prof. Dr.-Ing. Yves Burkhardt

1 Teaching content
From the comprehensive and interdisciplinary domain of the railway technology (vehicle technology, signal and safety technology, construction engineering and railway operating technology) the module picks out the domain of the automotive engineering with the emphasis of the mechanical part. It offers an interrelated introduction into selected chapters of the rail vehicle engineering with special emphasis in the railway-specific technical solutions and procedures. Theoretical basics as well as essential components of the rail vehicle are taught in depth.

2 Learning objectives
After completing the module, students will have developed an understanding of the mechanical and mechanical engineering principles of modern rail vehicles.

3 Recommended prerequisites for participation
Bachelor in Electrical Engineering, Mechatronics or Mechanical Engineering

4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 60 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module
MSc ETiT, MSc MEC, MSc EPE, MSc WI-ETiT

Module owner
Prof. Dr.-Ing. Rolf Findeisen

1 Teaching content

- Important topics of signal processing and stochastics
- Disturbance and excitation signals
- Identification of linear systems
  - Non-parametric identification (Frequency response estimation)
  - Parametric identification (Characteristic values, Output error and equation error minimization, Subspace method, Kalman filter)
  - Recursive methods
- Closed loop identification
- Basics of data-driven modelling of non-linear systems

2 Learning objectives
The students are taught the fundamental methods of data-driven modelling (identification). Based on assumptions on the system and constraints imposed by the measurements, the students are able to select, parametrize and apply appropriate methods to generate non-parametric and parametric models from the measurement data.

3 Recommended prerequisites for participation
Basics in the field of control engineering (e.g. lecture System Dynamics and Automatic Control Systems I)

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Default RS)
The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 25 students register, the examination will be an oral examination (duration: 25 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
MSc etit, MSc MEC

8 Grade bonus compliant to §25 (2)

Prof. Dr.-Ing. Yves Burkhardt

1 Teaching content
Goal: The application of new technologies, i.e. super conduction, magnetic levitation techniques and magneto-hydrodynamic converter principles, are introduced to the students. The physical operation mode in principle, implemented prototypes and the current state of the development are described in detail.

Content:
Application of the superconductors for electrical energy converters:
• rotating electrical machines (motors and generators),
• solenoid coils for the fusion research,
• locomotive- and railway transformers,
• magnetic bearings.
Active magnetic bearings (“magnetic levitation”):
• basics of the magnetic levitation technique,
• magnetic bearings for high speed drives in kW to MW range,
• application for high-speed trains with linear drives.
Magneto-hydrodynamic energy conversion:
• physical principle,
• state of the art and perspectives.
Fusion research:
• magnetic field arrangements for contactless plasma inclusion,
• state of the current research.

2 Learning objectives
After completion of the module students have basic knowledge of application of superconductivity in energy systems as well as magnetic levitation, magnetohydrodynamics and fusion technology.

3 Recommended prerequisites for participation
Physics, Electrical Machines and Drives, Electrical Power Engineering

4 Form of examination
Module exam:
• Module exam (Technical examination, Examination, Duration: 60 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
• Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module

1. **Teaching content**
Introduction to Finite Element Method (FEM), Basic examples of electromagnetic devices designed in 2D with FEM, 2D electromagnetic Design of transformers, AC machines, permanent magnet devices; eddy current applications such as squirrel-cage machines (Example: Wind generator); Cooling systems and thermal design: Calculation of temperature distribution within power devices

2. **Learning objectives**
Upon completion of the module, students will have a good knowledge in applying FEMAG and ANSYS software package to basic field problems.

3. **Recommended prerequisites for participation**
Strongly recommended is the attendance of lecture and active co-operation in the tutorial "Energy Converters - CAD and System Dynamics"

4. **Form of examination**
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation and/or Colloquium. The type of examination will be announced in the beginning of the lecture.

1 Teaching content
Safety instructions; Practical experiments about electrical drive systems and mechatronic actuators:
• Report preparation (one for each group) for each experiment
• Individual review of the students’ knowledge (individual performance) during and/or at the end of the semester
• The grading consists of the evaluation of the group performance and the individual performance.

2 Learning objectives
On completion of the module students will have trained the use of mechanical actors and acquired knowledge in using the actors and measuring them.

3 Recommended prerequisites for participation
Lecture "Elektrische Maschinen und Antriebe" and "Maschinenelemente und Mechatronik 1"

4 Form of examination
Module exam:
• Module exam (Study achievement, Oral/written examination, Default RS)
The examination has the form of a Report (including submission of programming code) and/or Presentation and/or Oral examination (25 minutes) and/or Colloquium (testate), but never more than two out of it. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading

### 1 Teaching content

**Content of the lecture part:** Mono- and hybrid drive concepts, motor technology, DC and AC machines, drive systems, car dynamic, energy storage;

**Content of the seminary work:** simulation of car with electric drive train, presentation of seminary work

### 2 Learning objectives

After completing the module, students have acquired knowledge of the basic design procedures for electric drives in hybrid and electric cars.

### 3 Recommended prerequisites for participation

Bachelor in Electrical Engineering or Mechatronics, "Electrical Drives and Machines" and "Power electronics"

### 4 Form of examination

Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)

Report and/or Presentation and/or Colloquium. The type of examination will be announced in the beginning of the lecture.

Prof. Dr.-Ing. Jürgen Adamy

1 Teaching content
In a small project group under the guidance of a scientific assistant, individual projects from a subject area of automation technology are worked on.

2 Learning objectives
After attending the module, a student is capable of:

1. planning a small project,
2. organizing the work within a project team,
3. searching for scientific background information on a given project,
4. creating ideas on how to solve problems arising in the project,
5. presenting the results in a scientific report, and
6. giving a talk on the results of the project.

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:

Module owner
Prof. Dr.-Ing. Rolf Findeisen

1 Teaching content
Teams of 2-4 students work on different mechatronic projects under the guidance of a project coordinator from the institute. The projects mainly cover the following subject areas:
• Modeling, analysis, and design of mechatronic systems
• Robust control design
• System analysis, supervision and fault diagnosis
• Modeling and identification
Application areas are mechatronic actuators, machine tools, production lines, test benches, automobiles, quadrocopters.

2 Learning objectives
After completing the project, the students will be familiar with the individual steps of investigating a mechatronic project. This includes in particular the compilation of a system specification as well as critical discussions and systematic selection of appropriate mechatronic solutions and their real technical implementation. Doing so, the students learn the practical application of mechatronic methods taught in the lectures to real-world problems. Additionally, in this project course, the students are supposed to improve their professional skills. These skills include e.g. teamwork, presentation techniques and systematic information retrieval.

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
• Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
• Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
MSc etit, MSc MEC, MSc iST

8 Grade bonus compliant to §25 (2)

9 References
Handouts will be distributed at start of the project (e.g. hints for writing project documentation, etc.)

Teaching content

Learning objectives
Students learn the theoretical basis of advanced simulation techniques for time dependent electromagnetic fields. Furthermore, the lecture mediates practical skills for the implementation, analysis and application of simulation codes for common problems of Electrical Engineering.

Recommended prerequisites for participation

Form of examination
Module exam:
- Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)

Prerequisite for the award of credit points
Passing the final module examination

Grading
Module exam:
- Module exam (Technical examination, Oral examination, Weighting: 100 %)

Usability of the module
MSc ETIT

Grade bonus compliant to §25 (2)

Prof. Dr.-Ing. Jürgen Adamy

1 Teaching content
- Concepts of machine learning
- Linear methods
- Support vector machines
- Trees and ensembles
- Training and assessment
- Unsupervised learning
- Neural networks and deep learning
- Convolutional neuronal networks (CNNs)
- CNN applications
- Recurrent neural networks (RNNs)

2 Learning objectives
Upon completion of the module, students will have a broad and practical view on the field of machine learning. First, the most relevant algorithm classes of supervised and unsupervised learning are discussed. After that, the course addresses deep neural networks, which enable many of today's applications in image and signal processing. The fundamental characteristics of all algorithms are compiled and demonstrated by programming examples. Students will be able to assess the methods and apply them to practical tasks.

3 Recommended prerequisites for participation
Fundamental knowledge in linear algebra and statistics
Preferred: Lecture “Fuzzy logic, neural networks and evolutionary algorithms”

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)
The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 7 students register, the examination will be an oral examination (duration: 30 min.). The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

8 Grade bonus compliant to §25 (2)

1 Teaching content
In "Robot Learning: Integrated Project, Part 1", students will pose a current research problem in the domain of robot learning with assistance of their advisor. The students will select a robot learning topic to fit their research interests, on which they will pursue in-depth literature studies. Using these results, they will develop a plan for their project, try out the algorithms of interest and implement a prototype in simulation.

2 Learning objectives
Upon successful completion of this course, students will be able to independently develop small research projects in the domain of robot learning and test first research ideas in simulation.

3 Recommended prerequisites for participation
Previous or concurrent participation in the lecture "Robot Learning".

4 Form of examination
Course related exam:
- [20-00-0753-pj] (Study achievement, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading

1 Teaching content
In "Robot Learning: Integrated Project, Part 2", students will complete their approach to the research problem from Part 1 and apply it to a real robot. A scientific article on the research problem, methods and results will be written and potentially submitted to a national or international scientific venue.

2 Learning objectives
Upon successful completion of this course, students will be able to independently develop small research projects in the domain of robot learning and test first research ideas in simulation.

3 Recommended prerequisites for participation
Previous or concurrent participation in the lecture "Robot Learning".

1 **Teaching content**
   - Foundations of modelling and simulation
   - Problem specification and system description for computational engineering
   - Model generation for the example of mechanical systems
   - Model analysis for the example of mechanical systems
   - Implementations of simulations for the example of robots and other systems
   - Interpretation and validation using measurement data
   - Applications in simulation and control of robots as well as in physically based animation and computer games

2 **Learning objectives**
   Upon successful completion of this class, students will be able to develop first models and simulations and can perform first simulation studies within robotics. They know the necessary key steps needed to construct simulations (problem specification, model generation, model analysis, implementation, and validation) and can use them to construct first simulations to meet the specification requirements.

3 **Recommended prerequisites for participation**

4 **Form of examination**
   Course related exam:
   - [20-00-0011-iv] (Technical examination, Oral/written examination, Default RS)

5 **Prerequisite for the award of credit points**
   Pass exam (100%)

6 **Grading**

1 Teaching content
Statics: force, moment (torque), free body diagram, equilibrium equations, center of gravity, truss, beams, adhesion and friction.
Mechanics of elastic bodies: stress and deformation, tension, torsion, bending.
Kinematics: point and rigid body movement.
Kinetics: dynamic force and moment equilibrium equations, energy and work, linear oscillators, momentum and angular momentum conservation laws, impact.

2 Learning objectives
In this course the students will learn the basic concepts of technical mechanics. They should be able to analyze the statics of simple statically determinate planar systems, to carry out elementary elastomechanical calculations of statically determinate and statically indeterminate structures, to describe and analyze movements, and to solve planar motion problems, oscillation and shock phenomena with the laws of kinetics.

3 Recommended prerequisites for participation

1. **Teaching content**
   - Foundations from robotics and machine learning for robot learning
   - Learning of forward models
   - Representation of a policy, hierarchical abstraction with movement primitives
   - Imitation learning
   - Optimal control with learned forward models
   - Reinforcement learning and policy search
   - Inverse reinforcement learning

2. **Learning objectives**
   Upon successful completion of this course, students are able to understand the relevant foundations of machine learning and robotics. They will be able to use machine learning approaches to empower robots to learn new tasks. They will understand the foundations of optimal decision making and reinforcement learning and can apply reinforcement learning algorithms to let a robot learn from interaction with its environment. Students will understand the difference between Imitation Learning, Reinforcement Learning, Policy Search and Inverse Reinforcement Learning and can apply each of this approaches in the appropriate scenario.

3. **Recommended prerequisites for participation**
   Good programming in Matlab
   Lecture Machine Learning 1 - Statistical Approaches is helpful but not mandatory.

4. **Form of examination**

1 Teaching content
optimization for static systems:
- unconstrained and constrained nonlinear optimization, optimality conditions
- numerical Newton type and SQP methods
- nonlinear least squares
- gradient free optimization methods
- practical aspects like problem formulation, approximation of derivatives, method specific parameters, assessment of a computed solution

optimization for dynamic systems:
- parameter optimization and estimation problems
- optimal control problem
- maximum principle and optimality conditions
- numerical methods for computing optimal trajectories
- optimal feedback control
- linear quadratic regulator

applications and case studies from engineering sciences and robotics

theoretical and practical assignments as well as programming tasks for deepening of knowledge and methodological skills

2 Learning objectives
Through successful participation students acquire fundamental knowledge and methodological skills in concepts, techniques and computational methods of optimization for static and dynamic systems and their application for optimization problems in engineering sciences.

3 Recommended prerequisites for participation
grundlegende mathematische Kenntnisse und Fähigkeiten in Linearer Algebra, Analysis mehrerer Veränderlicher und Grundlagen gewöhnlicher Differentialgleichungen

1 Teaching content
Parametric 3D CAD systems, PDM systems, 3D hand sketching, geometric models, design of single parts with geometric elements, features and parametrics, assembly modeling, bill of materials, tolerances and surface fits, technical product documentation, drawing standards, product development in teams.

2 Learning objectives
On successful completion of this module, students should be able to:
1. Understand and apply parametric 3D CAD and PDM systems.
2. Design parametric single parts and complex assemblies.
3. Create engineering drawings for documentation.
5. Work on and solve advanced tasks in virtual product development in teams.

3 Recommended prerequisites for participation

4 Form of examination
Module exam:
- Module exam (Technical examination, Special form, Default RS)
Product modelling project (continuous assessment procedure: Reports on component modeling, assembly.

Prof. Dr.-Ing. Jürgen Beyer

1 Teaching content
Navigation principles, Earth models, Coordinate systems, Radio navigation, Basics and instruments (ADF, VOR, DME, ILS), dead reckoning, functional principles and error analysis, satellite navigation, Introduction into GPS, signal description and measurement principles, Dilution of Precision (DoP), Differential GPS, Augmentation systems (RAIM, GIC, WAAS, LAAS, EGNOS).

2 Learning objectives
On successful completion of this module, students should be able to:
1. Explain the physics associated with the navigation of the earth.
2. Classify common coordinate systems and map projections.
3. Judge the methods of radio, coupling, and satellite navigation with respect to performance and applications.

3 Recommended prerequisites for participation
Recommended: Control Engineering

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral examination, Duration: 20 Min., Default RS)
Oral exam (in a group with 3 students) 60 min: 20 min per participant

5 Prerequisite for the award of credit points
Passing the examination

6 Grading
Module exam:
- Module exam (Technical examination, Oral examination, Weighting: 100 %)

**Module owner**
Prof. Dr.-Ing. Dipl-Wirt.-Ing. Benjamin Schleich

1 **Teaching content**
Students gain knowledge of advanced CA Methods through the analysis of recent industrial examples. This course builds on the basic course ‘Einführung in das rechnerunterstützte Konstruieren (CAD)’.

2 **Learning objectives**
The students will be familiar with advanced CA Methods. They are able to recognise, execute and plan the generic workflow of CA Processes. Furthermore they are able to transfer their theoretical knowledge into industrial practice.

3 **Recommended prerequisites for participation**
Einführung in das rechnergestützte Konstruieren (CAD)
Virtuelle Produktentwicklung A, B, C

4 **Form of examination**
Module exam:
• Module exam (Technical examination, Special form, Default RS)

5 **Prerequisite for the award of credit points**
Passing the final module examination

6 **Grading**
Module exam:
• Module exam (Technical examination, Special form, Weighting: 100 %)

1 Teaching content
You might have previously heard of or even tried out virtual/augmented reality, 3D printing, wearable or tangible user interfaces. The area of Human-Computer Interaction covers all these exciting topics and offers an opportunity to build new prototypes and try them out with people in the user studies. If you would like to better connect theory and practice in the area of Human-Computer Interaction (HCI), then the course of Hands-On Human-Computer Interaction (Hands-On HCI) is for you. The goal of the class is to walk you through the whole research cycle in HCI. It can play a great preparation role for your future bachelor/master thesis in HCI or lay a first brick in your academic path after finishing your studies.

2 Learning objectives
After completing the module, students can
- differentiate between and apply three approaches to HCI research.
- distinguish three types of empirical research.
- effectively read a scientific publication.
- differentiate between types of HCI contributions.
- Formulate and define research questions, hypotheses and experimental variables.
- create a suitable study design based on the previously developed research questions.
- conduct a study using quantitative and qualitative methods to collect data.
- Analyze, evaluate and interpret quantitative data on the basis of statistical methods.
- Analyze and interpret qualitative data on the basis of grounded theory.
- Understand the peer review process and write reviews for a scientific publication.
- Understand and apply evaluation techniques with and without users.
- Write the knowledge gained as a scientific publication and present it to a specialist audience.

3 Recommended prerequisites for participation
Recommended: Human-Computer Interaction (TK2)

4 Form of examination
Course related exam:
- [20-00-1116-iv] (Technical examination, Oral/written examination, Default RS)
The form of the examination will be announced at the beginning of the course. One or a combination of max. two of the following forms is possible.
Written exam (duration 60 or 90 or 120 minutes), oral exam (duration 15 or 30 minutes), homework (optional: including tests).

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:
- [20-00-1116-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
B.Sc. Informatik
M.Sc. Informatik
May be used in other degree programs.

### Language
English

### Module owner
Prof. Dr.-Ing. Rolf Findeisen

### 1 Teaching content

#### Lecture:
Introduction and basics of optimal control, Linear Quadratic Regulator (LQR) in discrete and continuous time, basics of model predictive control (cost functions, constraints, receding horizon), nominal model predictive control for linear systems, robust and stochastic model predictive control, model predictive control of nonlinear systems, combination of machine learning and model predictive control.

#### Group work:
In a group project, the students will apply the learned. The group project evolves a review of state of the art for the selected task, the selection of suitable model predictive control approach, and the implementation using python/Matlab. It includes a project report and is concluded by a project presentation.

### 2 Learning objectives
The students will understand the basics concepts of model predictive control. Furthermore, they are familiarized with machine learning approaches that can support model predictive controllers and possibly enhance the controller performance. This entails knowledge about theoretical questions such as stability in the nominal case, as well as extensions to the case of uncertain and disturbed systems. The students are enabled to design and implement model predictive controllers based on first principle/physical or data-based/machine learning based models. This entails the setup and design of the control structure as well as the tuning and identification of suitable parameters and cost functions of the controller.

### 3 Recommended prerequisites for participation
Basic concepts of control theory. Fundamentals of linear algebra, differential, and difference equations. Knowledge in Python and/or Matlab.

### 4 Form of examination

#### Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)
The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 25 students register, the examination will be an oral examination (duration: 25 min.). The type of examination will be announced in the beginning of the lecture.

### 5 Prerequisite for the award of credit points
Passing the final module examination

### 6 Grading

#### Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

### 7 Usability of the module

### 8 Grade bonus compliant to §25 (2)
Yes. Possibility to improve the grade by a group work/exercise.

### 9 References

1 Teaching content
Selected concepts of IT-Security (cryptography, security models, authentication, access control, security in networks; trusted computing, security engineering, privacy, web and browser security, information security management, IT forensic, cloud computing)

2 Learning objectives
After successful participation in the course, students are versant in common mechanisms and protocols to increase security in modern it-systems. Students have broad knowledge of it-security, data protection and privacy on the Internet.
Students are familiar with modern information technology security concepts from the field of cryptography, identity management, web, browser and network security. Students are able to identify attack vectors in it-systems and develop countermeasures.

3 Recommended prerequisites for participation
Participation of lecture Trusted Systems

## 1 Teaching content

Physical layer security techniques promise information theoretic security on the physical layer for wireless communication. This integrated course discusses the theory and practice of physical layer security. The underlying theory is introduced and the application of these fundamentals towards practical solutions is discussed. Attacks against (practical) physical layer security techniques are presented. Theoretical and practical exercises as well as the presentation of selected recent research results by seminar talks of students further deepen the understanding of the subject matter.

**Course contents:**
- Properties of the physical layer
- Fundamentals of information theoretic security and delineation from cryptography
- Physical layer security techniques (such as cooperative jamming, orthogonal blinding, zero-forcing, interference alignment, key extraction)
- Practical aspects of physical layer security techniques
- Practical implementations of physical layer security techniques using software-defined radios
- Selected current approaches to physical layer security

## 2 Learning objectives

After successfully attending the course, students have a basic theoretical knowledge and an in-deep practical knowledge in the area of physical layer security. They are able to describe the most important information-theoretic basics as well as theory and practice of physical layer security techniques. They are able to analyze practical physical layer security techniques and describe their weaknesses. Students have competencies in the practical realization of physical layer security techniques using software-defined radios. They can independently acquire the current state of research on physical layer security and present the acquired knowledge in a comprehensible fashion.

1 Teaching content
The integrated course Secure Mobile Systems covers the topic area of security in wireless and mobile networks and communication systems. Fundamental topics will be enriched by current research.

Course contents:
- Security analysis and modelling of security threats in mobile and wireless systems
- Selected attacks and security mechanisms specific to mobile and wireless systems
- Security in wireless sensor networks
- Security in wireless mesh networks
- Threats against privacy and privacy-preserving mechanisms in mobile and wireless systems
- Security in cellular networks (GSM, UMTS, LTE)
- Security on the physical layer in mobile and wireless systems
- Selected research topics in mobile and wireless systems

2 Learning objectives
After successfully attending the course, students have a specialized knowledge in the domain of security with emphasis on mobile, distributed, wireless communication networks. Students are able to apply and transfer the most important fundamentals from IT security, cryptography and traditional network security to the field of mobile systems.

Students obtain a thorough understanding of security mechanisms on the different network layers (application layer, transport layer, network layer, link layer, physical layer). As a result, they are able to thoroughly discuss the characteristics and principles in the area of mobile system security and exhibit detailed theoretical and practical knowledge in this field.

3 Recommended prerequisites for participation
Grundlagen der Netzsicherheit und der Mobilen Netze

1. **Teaching content**
   The Lab Exercise on Secure Mobile Networking covers the applied software development as well as hardware-software development. Topic areas covered are communication networks, IT security, mobile networks and wireless communications as well as the combination of these. Goal is the solving of a given problem by implementation in software or hardware/software in a team.

   Course contents:
   - Solving of a problem in the area of communication networks, IT security, mobile networks and wireless communications
   - Survey on solution alternatives and discussion of pros and cons
   - Conception of a software architecture or a combined hardware-software architecture
   - Software/hardware design for the target platform
   - Prototypical realization on the target platform
   - Evaluation of the system with respect to performance aspects
   - Documentation of the implemented solution

2. **Learning objectives**
   After successfully attending the course, students have acquired the ability to solve problems in the area of secure mobile networking using software technology. The students have gained insight into the design/implementation of complex protocols or applications in one/multiple of the areas of communication networks, IT security, mobile networks and wireless communications. They are able to implement the chosen protocols and application, and to test the functionality as well as to evaluate the performance. Students are able to document the developed software artefacts and to present the project progress and outcomes.

3. **Recommended prerequisites for participation**
   Successfull participation in an lecture of SEEMOO.

4. **Form of examination**
   Course related exam:
   - [20-00-0552-pr] (Study achievement, Oral/written examination, Default RS)

1 Teaching content
The Project on Secure Mobile Networking covers the applied software development as well as hardware-software development. Topic areas covered are communication networks, IT security, mobile networks and wireless communications as well as the combination of these. Goal is to independently carry out a development project in a team.

Course contents:
- Independent solving of a development project in the area of communication networks, IT security, mobile networks and wireless communications
- Project planning and project management
- Survey on solution alternatives and discussion of pros and cons
- Conception of a software architecture or a combined hardware-software architecture
- Software/hardware design for the target platform
- Prototypical realization on the target platform
- Evaluation of the system with respect to performance aspects
- Documentation of the implemented solution as well as extensive documentation of the project management

2 Learning objectives
After successfully attending the course, students have acquired the ability to solve complex problems in the area of secure mobile networking using software technology. To this end, the students are able to independently define, manage and carry out a project.

The students have gained insight into the design/implementation of complex protocols or applications in one/multiple of the areas of communication networks, IT security, mobile networks and wireless communications. They are able to implement the chosen protocols and application, and to test the functionality as well as to evaluate the performance. The students are able to document the project planning and management, the developed software artefacts and to present the project progress and outcomes.

1 Teaching content
Mathematical basic principles:
• Calculations in congruence and residue class rings
Basic principles of encryption:
• Symmetric vs. asymmetric cryptosystems
• Block and stream ciphers, AES, DES
• Cryptanalysis
• Probability and perfect security
• Public-key encryption
• RSA, Diffie-Hellman, ElGamal
• Factoring large numbers
• Discrete logarithms
• Cryptographic hash functions
• Digital signatures
• Identification

2 Learning objectives
After successful completion of the module students
• understood the mathematical foundations of cryptography such as calculations in congruence and residue class rings, factoring large numbers, probability theory and perfect security
• understood the principles of public and secret key encryption and relevant schemes including their security and efficiency
• understood the principles of digital signatures and the relevant schemes including their security and efficiency

3 Recommended prerequisites for participation
Recommended:
• Linear Algebra for Computer Science
• Funktionale und Objektorientierte Programmierkonzepte

4 Form of examination
Course related exam:
• [20-00-0085-iv] (Technical examination, Oral/written examination, Default RS)
The form of the examination will be announced at the beginning of the course. One or a combination of max. two of the following forms is possible.

Written exam (duration 60 or 90 or 120 minutes), oral exam (duration 15 or 30 minutes), homework (optional: including tests).

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading

1 Teaching content
During the course of this seminar advanced theories and subjects from the field of "Science and Technology for Peace and Security" (PEASEC) will be developed. Based on the introduction and repetition of the principles in scientific research, contemporary project topics which are related to PEASEC research will be offered by us and addressed by students applying scientific methods. During the semester scientific articles ("papers") will be developed and presented. As usual in scientific work, students will constructively review each other's work in a peer-review process. Subsequently, the papers will be revised for the finalization and submission.

EXEMPLARY THEMATIC AREAS
- Safety-critical human-computer interaction, social media and collaborative technologies in conflict and crisis situations, usable security and privacy
- Information technology for peace and security, information warfare, manipulation of opinions, fake news, cyber war, cyber peace, dual-use in computer science, conscientious digitalization, computer science and society
- Resilient IT-based (critical) infrastructures, particularly communication, agriculture, energy

Topics for the current semester are available at www.peasec.de/lehre

PROCEDURE:
- Technical introduction including the presentation and assignment of topics
- Writing and submitting a short exposé
- Methodological lecture
- Short presentation of the own topic and constructive feedback
- Submission of a first complete version of the paper
- Assessment within a students' peer-review process
- Final submission of the paper
- Grading

A mandatory introduction ("kick-off") is the first date, the mandatory methodological lecture is the second date. The assignment of topics and formation of groups will take place collaboratively during the kickoff and, if necessary, in the following week.

2 Learning objectives
- Autonomous familiarization with a topic in the field of peace, conflict and security research from the perspective of computer science
- Further autonomous literature research, interpretation and classification
- Preparation and presentation of the topic to a heterogenous audience and subsequent expert discussion
- Writing a scientific article
- Assessment of scientific articles ("peer-review") with constructive feedback
- Knowledge of the procedures of academic research and publication

3 Recommended prerequisites for participation
Principles in one of the subjects: Computer Science, IT-Security, Human-Computer-Interaction or Peace and Conflict Studies; basic knowledge in the topics of PEASEC

4 Form of examination
Course related exam:
- [20-00-1019-se] (Study achievement, Oral/written examination, Default RS)

1 **Teaching content**
Technological and scientific progress, especially the rapid development in information technology (IT), plays a crucial role regarding questions of peace and security. This course addresses the significance, potentials and challenges of IT for peace and security. For this purpose, the course offers an introduction to peace, conflict, and security research, thereby focusing on natural-science, technical and computer science perspectives. It thereby sheds light on cyber conflicts, war and peace, cyber arms control, cyber attribution and infra-structures as well as culture and interaction before an outlook is given.

**CONTENT:**
- Introduction to Natural-Science/Technical Peace Research and IT Perspectives of Peace, Conflict, and Security Research
- Cyber War, Espionage, Defense, Darknets, Critical Infrastructures, Cultural Violence
- Cyber Peace, Dual-Use, Confidence and Security Building Measures, Arms Control, Unmanned Systems, Verification, Attribution

**STRUCTURE:**
- Part II: Cyber War and Conflict (Information Warfare, Cyber Espionage and Cyber Defense, Darknets as Tools for Cyber Warfare)
- Part III: Cyber Peace (From Cyberwar to Cyberpeace, Dual-Use and Dilemmas of Cybersecurity, Confidence and Security Building Measures for Cyber Forces)
- Part IV: Cyber Arms Control (Arms Control and its Applicability to Cyberspace, Unmanned Systems: The Robotic Revolution, Verification in Cyberspace)
- Part V: Cyber Attribution and Infrastructures (Attribution of Cyber Attacks, Resilient Critical Infrastructures, Security of Critical Information Infrastructures)
- Part VI: Social Interaction (Safety and Security, Cultural Violence, Social Media and ICT Usage in Conflict Areas)
- Part VII: Outlook (The Future of IT in Peace and Security)

Characteristics for the current semester are available at www.peasec.de/lehre

2 **Learning objectives**
- Knowledge of basics of computer science for peace, conflict and security research
- Assessment of IT to promote or prevent peace and security
- Knowledge in the design and development of IT for peace

3 **Recommended prerequisites for participation**
Principles in one of the subjects: Computer Science, IT-Security, Human-Computer-Interaction or Peace and Conflict Studies

4 **Form of examination**
Course related exam:
- [20-00-1026-iv] (Technical examination, Oral/written examination, Default RS)

5 **Prerequisite for the award of credit points**
Pass exam (100%)
### Grading

Computer Security

Module nr. 20-00-0018
Credit points 5 CP
Workload 150 h
Self-study 105 h
Module duration 1 Term
Module cycle Winter term

Language German
Module owner Prof. Dr. phil. nat. Marc Fischlin

1 Teaching content
Part I: Cryptography
• Background in mathematics for cryptography
• Security objectives: Confidentiality, Integrity, Authenticity
• Symmetric and asymmetric cryptography
• Hash functions and digital signatures
• Protocols for key distribution
Part II: IT-Security and Dependability
• Basic concepts of IT security
• Authentication
• Access control models and mechanisms
• Basic concepts of network security
• Basic concepts of software security
• Basic concepts of web security
• Dependable systems: error tolerance, redundancy, availability

2 Learning objectives
After successfully attending the course, students are familiar with the basic concepts, methods and models in the areas of cryptography and computer security. They understand the most important methods that allow to secure software and hardware systems against attackers and are able to apply this knowledge to concrete application scenarios.

3 Recommended prerequisites for participation

4 Form of examination
Course related exam:
• [20-00-0018-iv] (Technical examination, Oral/written examination, Default RS)
Written Exam (90 min.)

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:
• [20-00-0018-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

</tbody>
</table>

### Language
English

### Module owner
Prof. Dr.-Ing. Heiko Mantel

### Teaching content
- formal modeling of security-critical systems in predicate logic
- theoretical foundations of access control and information-flow control
- formal modeling of security properties in predicate logic
- distinction between qualitative and quantitative security properties
- decidability and complexity results for security properties
- verification of security guarantees in distributed systems
- impact of stepwise composition and refinement on security guarantees
- formal languages for specifying security policies and their semantics
- certification of security-critical systems

### Learning objectives
After successfully participating in this course, students know relevant formal security models and analysis techniques. They understand the fundamental differences between various classes of security properties and the interplay between stepwise software development and security guarantees. They are able to model systems and security requirements formally and to analyze security aspects rigorously based on formal specifications.

### Recommended prerequisites for participation
Knowledge within Computer Science and Mathematics according 1-4 semester of B.Sc. Computer Science.

### Form of examination
Course related exam:
- [20-00-0362-iv] (Technical examination, Oral/written examination, Default RS)

### Prerequisite for the award of credit points
Pass exam (100%)

### Grading
Course related exam:
- [20-00-0362-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

### Usability of the module
- B.Sc. Informatik
- M.Sc. Informatik
- M.Sc. Wirtschaftsinformatik
- B.Sc. Psychologie in IT
- Joint B.A. Informatik
- B.Sc. Sportwissenschaft und Informatik

Can be used in other degree programs.

### Grade bonus compliant to §25 (2)

1 **Teaching content**

The integrated course Network Security covers the principles and practice of computer and telecommunication network security with particular emphasis on Internet security. After transferring the fundamentals of IT security and cryptography to the networking domain, we follow a top-down approach to network security. Starting with the application layer, the course provides a detailed discussion of network security principles and protocols. In addition to well known mechanisms, selected recent developments in the area of network security will be examined.

Course contents:
- Network security: introduction, motivation, and challenges
- Fundamentals: a reference model for network security, security standards for networks and the Internet, security threats, attacks, services, and mechanisms
- Cryptographic foundations for networking security: symmetric crypto and its use in networks, public-key crypto and its use in networks, support functions to implement network security
- Application layer security
- Transport layer security
- Network layer security
- Link layer security
- Physical layer security and physical security
- Operational network security: firewalls, intrusion detection systems
- Selected topics in network security

2 **Learning objectives**

After successfully attending the course, students have acquired an in-depth knowledge in the domain of communication network security with emphasis on Internet security. Students are able to apply and transfer the most important fundamentals from IT security and cryptography to the field of communication networks. Students are able to distinguish the most important basic techniques for securing communication networks. They have a thorough understanding of security mechanisms on the different network layers (application layer, transport layer, network layer, link layer, physical layer). As a result, they are able to thoroughly discuss the characteristics and principles in the area of network security and exhibit detailed theoretical and practical knowledge in this field. Additionally, students are able to describe recent developments in the area of network security (e.g. peer-to-peer security, mobile network security, etc.). The exercise deepens the theoretical foundations by means of exercises, which consist of literature, calculation as well as practical implementation/application examples.

3 **Recommended prerequisites for participation**

Knowledge in the area IT Security, Introduction to Cryptography and Communication Networks

4 **Form of examination**

Course related exam:
- [20-00-0512-iv] (Technical examination, Oral/written examination, Default RS)

5 **Prerequisite for the award of credit points**

Pass exam (100%)

6 **Grading**

Course related exam:
- [20-00-0512-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**
Can be used in other degree programs.

8 Grade bonus compliant to §25 (2)
In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.

10. Trust Center
    1. Registration Authority (registration protocols, proof-of-possession, extended validation certificates)
    2. Certification Authority
11. Certification Paths and Protocols
    1. Construction
    2. LDAP and other methods
    3. SCVP
2 Learning objectives
After completion of the module Public Key Infrastructures, the students are able to
• understand the IT security goals and the cryptographic primitives to realize these goals.
• understand and explain the foundations of Public Key Infrastructures, in particular the different components (e.g., private keys, certificates, policies), actors (e.g., Trust centers, key owners) and processes (e.g., certificate request, certificate issuance, validation of certificates, revocation).
• understand, explain and apply the underlying theoretical models (e.g., trust models, validity models.
• use Public Key Infrastructures in practice (e.g., for Email signing and encryption, validation of the authenticity of web sites).

3 Recommended prerequisites for participation

4 Form of examination
Course related exam:
• [20-00-0063-iv] (Technical examination, Oral/written examination, Default RS)
The form of the examination will be announced at the beginning of the course. One or a combination of max. two of the following forms is possible.

Written exam (duration 60 or 90 or 120 minutes), oral exam (duration 15 or 30 minutes), homework (optional: including tests).

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:
• [20-00-0063-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
B. Sc. Informatik
M. Sc. Informatik
M. Sc. IT Sicherheit

May be used in other degree programs.

1 Teaching content
Critical infrastructures are organisations or institutions of major importance to the state community, their failure or impairment would result in long-term supply shortages, significant disruption to public security or other dramatic consequences (BMI, 2009).

The lecture focuses on different critical infrastructures and their security challenges. After an introduction into some basics, speakers from research institutions, companies, authorities or operators of critical infrastructures are lecturing on specific facets of the topic. A self-study of selected articles complements the lectures.

In the past years, speakers from the German Bundestag, the Federal Office of Civil Protection and Disaster Assistance (BBK), the Federal Office for Information Security (BSI), the German Federal Agency for Technical Relief (BBK), the Hessen Cyber Competence Center (Hessen 3C), Siemens AG, Deutsche Bahn, Deutsche Börse, German Air Traffic Control, as well as from universities and research institutions have given lectures.

2 Learning objectives
After successfully attending the course, students are familiar with the most important IT security problems in critical infrastructures. They understand techniques that allow to secure critical infrastructures and are able to apply them in different sectors (such as the smart grid, the transportation or the telecommunications sectors).

3 Recommended prerequisites for participation
Computersystemssicherheit

4 Form of examination

1 Teaching content
The Seminar on Networking, Security, Mobility, and Wireless Communications covers current research in the given topic areas. Under supervision of the tutors, the seminar includes studying, critically analyzing and discussing, summarizing, and presenting selected research articles. Deliverables are a short presentation, a final presentation, and a seminar paper.

Course contents:
- Independent exploration of a topic in the area of networking, security, mobility, and wireless communications (typically in English)
- Own, enhanced literature study, guided by tutor
- Interpretation and classification of the literature study, guided by tutor
- Preparation of an introductory talk as well as a final talk including presentation slides, guided by tutor
- Presentation of both talks for a heterogeneous audience (experts/non-experts)
- Technical discussion after the talks
- Feedback to the speakers and the talks (including presentation skills) and technical content

2 Learning objectives
After successfully attending the course, students are able to work in a scientific manner under guidance. They know the fundamental techniques for scientific literature work and can apply them to a well-defined topic area. They have acquired intermediate knowledge on selected mechanisms, methodologies as well as applications for the investigated topic area. Students can present this acquired knowledge to a heterogeneous audience and explain the technical details of the investigated topic.

3 Recommended prerequisites for participation
Successfull participation in a lecture of SEEMOO.

### 1 Teaching content
The students will gain an insight into the challenges of multimedia security and the established solution approaches. These include concepts such as media integrity, confidentiality and authenticity. The students already know the procedures used in digital watermarking, robust hashing, partial encryption, multimedia forensics and DRM. Choosing the appropriate solution from a full panoply of solution mechanisms they will be able to respond optimally to the multimedia security challenges depending on the respective requirements.

- Partial encoding procedures for video and audio to ensure confidentiality and authenticity
- Digital watermarks for images and audio - areas of application, methods and procedures
- Digital Rights Management and Copyright protection procedures
- Visual cryptography

Besides discussing different algorithms, i.e. their possibilities, limitations and weaknesses, the commercial and societal aspects of protective measures will also be part of the lecture.

### 2 Learning objectives
After successful completion of the module students got an overview of the challenges posed by multimedia security as well as known solutions. This includes concepts of digital watermarks, robust hashes, partial encryption, multimedia forensics, and DRM. The students are able to address challenges of multimedia security by applying appropriate solutions.

### 3 Recommended prerequisites for participation
Recommended: Basic knowledge in Multimedia-Formats and IT Security.

### 4 Form of examination
Course related exam:
- [20-00-0093-vl] (Technical examination, Oral/written examination, Default RS)

The form of the examination will be announced at the beginning of the course. One or a combination of max. two of the following forms is possible.

Written exam (duration 60 or 90 or 120 minutes), oral exam (duration 15 or 30 minutes), homework (optional: including tests).

### 5 Prerequisite for the award of credit points
Pass exam (100%)

### 6 Grading
Course related exam:
- [20-00-0093-vl] (Technical examination, Oral/written examination, Weighting: 100 %)

### 7 Usability of the module
B. Sc. Informatik
M. Sc. Informatik
M. Sc. IT Sicherheit
M.Sc. IT Security

May be used in other degree programs.

### 8 Grade bonus compliant to §25 (2)

1. **Teaching content**
   - Key derivation, key exchange, secure communication, credentials, crypto currencies (TLS, SSH, IPSec, Bitcoin, ...).

2. **Learning objectives**
   - After successful completion the participants understand the design choices and security guarantees of real-world cryptographic protocols, used in our daily lives. They learn to judge the significance and limitations of security models and security proofs for practical purposes.

3. **Recommended prerequisites for participation**
   - Einführung in die Kryptographie

4. **Form of examination**
   - Course related exam:

## 1 Teaching content
In this practical course, the students deal with different aspects of smartphone security. The project tasks specifically target the open-source Android OS and comprise the following areas:
- Design and implementation of selected software attacks (ethical hacking)
- Design and implementation of secure user apps
- Modifications of the Android Middleware and Kernel to build security architectures
- System programming in general

## 2 Learning objectives
After successfully completing this lab students will have gained knowledge and hands-on experience with security mechanisms in modern smartphone operating systems. Furthermore, they gain experience in system programming in general.

## 3 Recommended prerequisites for participation
- Basics operating systems
- Knowledge in C++ and Java

## 4 Form of examination
Course related exam:
- [20-00-0615-pr] (Study achievement, Oral/written examination, Default RS)

## 5 Prerequisite for the award of credit points
Pass exam (100%)

## 6 Grading
Course related exam:
- [20-00-0615-pr] (Study achievement, Oral/written examination, Weighting: 100 %)

## 7 Usability of the module
- B.Sc. Informatik
- M.Sc. Informatik
- M.Sc. Wirtschaftsinformatik
- B.Sc. Psychologie in IT
- Joint B.A. Informatik
- B.Sc. Sportwissenschaft und Informatik

Can be used in other degree programs.

## 8 Grade bonus compliant to §25 (2)

1 Teaching content
In this lab we will learn the basic and advanced aspects of network security. We will review the foundational protocols, such as BGP and DNS, infrastructure modules, such as routers, switches and firewalls, and will also discuss applications security. We will discuss and demonstrate attacks and defences. Each of the students will receive a specific topic on which they will work during the semester, and on which they will be guided.

2 Learning objectives
At the end of the course the students will acquire a good knowledge in Network security, and in particular in topics on which they will prepare projects. The grade is based on the quality of the submitted project.

3 Recommended prerequisites for participation
The students should have a background in networking and in operating systems - these are prerequisite courses.

4 Form of examination
Course related exam:
- [20-00-1018-pr] (Study achievement, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

1. **Teaching content**
   - Protection in Networked Systems: background, motivation, challenges
   - Trust (Computational Trust): models and mechanisms
   - Trust (Computational Trust): application in PKI, Cloud Computing, Reputation Systems, and Web Services
   - Trust: regret management and device comfort
   - Privacy: privacy definitions, models, data anonymity, communication anonymity
   - Privacy & Trust: privacy-preserving trust models, mechanisms, and application to IDM
   - Security & Economics
   - Resilience: models, network intrusion detection systems, collaborative intrusion detection systems, honeypots
   - Resilient networks

2. **Learning objectives**
The integrated lecture Protection in Networked Systems - Trust, Resilience, and Privacy covers the topics of computational trust, resilient and anonymous networks, and collaborative defense mechanisms. By attending this course, the students will be able to understand the problems and solutions in the context of networked systems. The course content will consider the concept of End-to-End systems emphasizing on users, devices, networks, and applications or services.

3. **Recommended prerequisites for participation**
   - Selected book chapters and scientific publications

4. **Form of examination**
   Course related exam:

## 1 Teaching content
The lab course offers development projects relevant to the current research of the research group “Science and Technology for Peace and Security” (PEASEC). In addition to a broad overview, students will gain insight in a specific area of development. These topics are linked to the specializations of the members of the re-search group and provide the students with technical and scientific insight. The topics will be worked on in small groups.

Examples for topics are available at www.peasec.de/lehre

## 2 Learning objectives
Acquiring the qualification for solving a practical task in a team or by oneself and presenting the results, such as:
- Resolution of an issue in the domain of peace, security and crisis informatics
- Requirements engineering and empirical studies
- Research of solution alternatives and assessment of their (dis)advantages
- Design, prototypical implementation and maintenance of innovative applications
- Evaluation of existing applications with regard to different assessment criteria
- Documentation of the developed solution

## 3 Recommended prerequisites for participation
Foundations of Computer Science/Functional and Object-oriented Programming Concepts

## 4 Form of examination
Course related exam:
- [20-00-1020-pr] (Study achievement, Oral/written examination, Default RS)

## 5 Prerequisite for the award of credit points
Pass exam (100%)

1. **Teaching content**
   In this seminar different security aspects of mobile devices (especially smartphone) will be analyzed and discussed. Students will process, summarize and evaluate a number of current scientific publications for a certain topic in form of an essay. Additionally, each student will present his work in front of the group at the end of the semester.

   Possible topics include:
   - Security models of current smartphone operating systems (e.g. Android, iOS, Windows Phone, MeeGo, Symbian, RIM)
   - Security analysis and comparison of current app store models
   - Usage of mobile devices in enterprises
   - Security extensions for Android
   - Kernel security
   - Application security (e.g. mobile malware and runtime attacks)
   - Privacy aspects in mobile devices
   - Security of mobile networks

2. **Learning objectives**
   This seminar covers several topics in the area of mobile security with the focus on smartphone security. Through this course students will gain detailed knowledge on the security and privacy aspects of mobile operating systems, devices, infrastructures and end-user applications. Moreover, they learn to examine current research in this area, to dive into a scientific topic and present their results in a short paper as well as an oral presentation.

3. **Recommended prerequisites for participation**
   Grundlagen der Informatik

4. **Form of examination**
   Course related exam:

1 **Teaching content**

Cryptographic protocols allow parties with potentially conflicting interests to jointly perform certain tasks. This course covers basic and advanced constructions for cryptographic protocols and their applications, including Commitments, Secure Coin Flipping, Zero-Knowledge Proofs, Mixnets, Anonymous Credentials, Private Information Retrieval, Secure Multiparty Computation, and Hardware-assisted Cryptographic Protocols.

2 **Learning objectives**

Students know basic and advanced cryptographic protocols, can assess and compare their efficiency and security, and know their basic applications.

3 **Recommended prerequisites for participation**

Basic knowledge in applied cryptography is strongly recommended, e.g., by successfully completing the course "Computer Security" or "Introduction to Cryptography".

4 **Form of examination**

Course related exam:
- [20-00-1032-iv] (Technical examination, Oral/written examination, Default RS)

1 Teaching content
The Seminar on Protection in Infrastructures and Networks is a cycle of seminars where students are given the chance to read, analyze and summarize current scientific publications. The topics are related to the areas of:
- Trust
- Privacy
- Resilience
in the domain of infrastructures and networks.

2 Learning objectives
Students participating in the seminar will have the opportunity to learn and conduct research in the direction of these topics.
Your task will be to understand state-of-the-art scientific publications in order to explain their contributions. Furthermore, you are expected to write a survey in relation to the topic assigned to you.

3 Recommended prerequisites for participation
Basic knowledge about it-security and distributed systems.

Lectures:
- Computersystemsicherheit (CSS)
- Computer-Netzwerke und verteilte Systeme (CNuvS)

4 Form of examination
Course related exam:
- [20-00-1022-se] (Study achievement, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:

1 **Teaching content**
This course is aimed at students who have attended the lecture Cryptocurrencies and want to understand and examine some aspects of this topic in more detail. It provides a platform to check novel applications based on Blockchain technology for their feasibility and usefulness. Complex cryptographic systems and ideas from the lecture Cryptocurrencies should be understood in team work and implemented in a decentralized system. The students are asked to develop a project plan and outline, which should be implemented over the course of the semester. The students get first experiences with the implementation of a more complex development project.

2 **Learning objectives**
Participants of this course will learn about the technical and practical implications of distributed cryptographic systems. These include first hands-on experiences in the following areas:
- Development of smart contracts and distributed applications
- Communication of systems through decentral peer-to-peer networks
- Development of software using cryptographic building blocks
- Security and anonymity of users of cryptographic currencies
- Possible attacks on smart contracts and cryptocurrencies

3 **Recommended prerequisites for participation**
This course is directed at students that finished the cryptocurrencies lecture with good marks and programming skills.

4 **Form of examination**
Course related exam:
- [20-00-1031-pr] (Study achievement, Oral/written examination, Default RS)

5 **Prerequisite for the award of credit points**
Pass exam (100%)

1. **Teaching content**
This course provides a sound and practice-oriented introduction and an overview of the foundations, methods, and applications of human-computer-interaction (HCI) in the context of security, emergencies, crises, disasters, war, and peace. Addressing this, interactive, mobile, ubiquitous and cooperative technologies, as well as social media, are presented. Here, classical topics such as usable (IT) security, industry 4.0, civil protection, medicine, and automotive, as well as augmented reality, crowdsourcing, shitstorm management, social media analytics and cyberwar all find their place. Methodologically, the spectrum from usable safety to usable security engineering is covered from analysis through design to evaluation.

CONTENT:
- Foundations and Methods (Usable Safety; Usable Security; Analysis, Design, Implementation, Evaluation; Law, Ethics and Culture)
- Safety-critical Cooperative Systems (Social Media, Cooperative Systems, Voluntary Participation, Peace and Security)

STRUCTURE:
Part I: Introduction and Overview
Part II: Foundations and Methods
- Law, Ethics and Culture (Selected Legal Implications for Safety-critical IT, Ethical, Legal and Social Implications (ELSI), International and Intercultural Aspects of Safety-critical Systems)
Part III: Safety-critical Interactive Systems
- Crisis Management and Medical Engineering (IT-Support of Standard and Exceptional Operations of Emergency Services, Safety-critical Human-Machine-Interaction in Medical Technology, Warnings of the Population in Disaster Situations)
- Warning Systems and Assistance Systems (Human Factors in the Development of Driver Assistance Systems, From Driver Information to Driver Assistance and Autonomous Driving)
Part IV: Safety-critical Cooperative Systems
- Social Media (Social Media in Emergency Situations, Crises and Catastrophes, Social Media Analytics for Companies and Authorities, Corporate Shitstorm Management: Confrontations in Social Media)
- Cooperative Systems for Mission Situations (Resilience through Cooperative Technologies, IT-based Pro cess Support for Safety of Major Events, Situational Awareness in Augmented and Virtual Reality Simulation Games)
- Technology for Voluntary Participation (Humanitarian Aid and Concepts of Digital Aid, Involvement of Emergent Volunteers for the Mastery of Loss Events, Mobiles Crowdsourcing for the Integration of Volunteers)
- Peace and Security (Computer Science for Peace and Security, Social Media in Political Conflict Situations)
Part V: Outlook: The Future of Safety-critical Human-Computer-Interaction
Details for the current semester can be found at www.peasec.de/lehre
- Understanding of safety-critical HCI and the underlying disciplines HCI as well as crisis and security management
- Overview of selected basics and methods of safety-critical HCI (usable safety, usable security, analysis, design, implementation, evaluation, law, ethics, and culture)
- Orientation in application domains and fields
- Knowledge about safety-critical interactive systems (business information systems, crisis management systems, medical engineering, warning and assistance systems)
- Knowledge about safety-critical cooperative systems (social media, cooperation systems, voluntary participation, peace, and security)

3 Recommended prerequisites for participation
Principles in one of the subjects: Computer Science, IT-Security, Human-Computer-Interaction or Peace and Conflict Studies

4 Form of examination
Course related exam:
- [20-00-1025-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:

1 Teaching content
In the lecture, an exemplary, fictitious organization is used to demonstrate how information security is established in all processes of the organization.

The following topics are considered, among others:
- Maturity level assessment regarding information security of the organization
- Capability Maturity Model Integration (CMMI) Framework
- Establishment of a Cyber Security Strategy
- Information Security Governance
- Establishment of an Information Security Management System (ISMS) according to ISO/IEC 27001:2013 and IT-Grundschutz
- Security Awareness within the organization
- Key Performance Indicator to measure information security
- Asset Management, information networks and process analyses
- Protection requirement analyses and business impact analyses
- Qualitative and quantitative risk management
- Risk analysis, treatment and monitoring processes
- Vulnerability Management (dealing with IT vulnerabilities in own and outsourced systems)
- Business Continuity Management (BCM)
- Business Continuity Planning (BCP)
- Secure IT operations, securing operational processes
- Secure development
- Securing cloud services
- Management of service providers
- Incident Management: securing, detecting and responding to security incidents
- Audit Management
- Review of compliance and governance

2 Learning objectives
The main objective of this module is to learn how IT and information security is managed in an organization, focusing on management rather than technical or formal IT security.
- Knowledge, contents and structures of an Information Security Management System (ISMS)
- Overview of common procedures regarding information security management, e.g. ISO 27001, IT-Grundschutz, NIST Cybersecurity Framework.
- Identification and protection requirement analysis of assets in the organization
- Knowledge of common risk management procedures
- Systematic assessment of information security in the organization using metrics
- Establishment of processes relevant to information security such as vulnerability management, BCM processes, incident management and audit management

3 Recommended prerequisites for participation
Attendance of the course "Computer Security" is recommended.

4 Form of examination
Course related exam:
• [20-00-1123-vl] (Technical examination, Oral/written examination, Default RS)
The form of the examination will be announced at the beginning of the course. One or a combination of max. two of the following forms is possible.
Written exam (duration 60 or 90 or 120 minutes), oral exam (duration 15 or 30 minutes), homework (optional: including tests).

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Course related exam:
• [20-00-1123-vl] (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
B.Sc. Informatik
M.Sc. Informatik
May be used in other degree programs.

8 Grade bonus compliant to §25 (2)

### Language
English

### Module owner
Prof. Ph.D. Sebastian Faust

### Teaching content
Cryptographic schemes are classically secure against black-box attacks, where an attacker exploits weaknesses of the underlying cryptographic algorithm. When cryptography is implemented in practice, so-called side-channel attacks are a further threat to their security. Most of cryptography can be broken by side-channel attacks and countless examples illustrate that almost all the devices that are in use today are affected by them. Starting in the late 1990s, when Kocher showed that smart cards can be broken using timing or power analysis attacks, there has been a plethora of different side-channel attacks been discovered. Most recently, examples such as Foreshadow illustrate that even advanced computing machinery is vulnerable to side-channel attacks.
Leakage resilient cryptography is the discipline that formalises these practical attacks in order to use formal methods for demonstrating security against them. In particular, it defines new security models, so-called leakage models, that incorporate side-channel attacks into the classical security models, and design cryptographic schemes that are provable secure within them.

### Learning objectives
Upon successful completion of the module, students will be familiar with the most influential papers on side-channel attacks and leakage resilient cryptography in order to:

- Present and understand popular side channel attacks (e.g., power analysis attacks, timing attacks, foreshadow etc.)
- Present and understand common countermeasures against side-channel attacks (e.g., constant time cryptography, randomized execution, masking schemes, algorithmic countermeasures, etc.)
- Present security models in leakage resilient cryptography and the formal security analysis of side channel countermeasures (e.g., memory leakage models and computation leakage models)

### Recommended prerequisites for participation
Recommended:
The seminar is aimed at master students. Basic lecture IT security or basic knowledge in cryptography are recommended, but not mandatory.

### Form of examination
Course related exam:
• [20-00-1088-se] (Study achievement, Oral/written examination, Default RS)
The form of the examination will be announced at the beginning of the course. One or a combination of max. two of the following forms is possible:
Colloquium (optional: including presentation), Term Paper.

### Prerequisite for the award of credit points
Pass exam (100%)

### Grading
Course related exam:
• [20-00-1088-se] (Study achievement, Oral/written examination, Weighting: 100 %)

### Usability of the module
B.Sc. Informatik
M.Sc. Informatik
May be used in other degree programs.

### Grade bonus compliant to §25 (2)

1 **Teaching content**
Introduction to basic principles of computer graphics, in particular input and output devices, rendering using OpenGL, ray tracing, illumination modelling, ongoing development in computer graphics.

2 **Learning objectives**
After successful completion of the module, students are able to understand all components of the graphic pipeline and change variable parts (Vertex-Shader, Fragment-Shader, etc.). They are able to arrange, change and effectively store objects in the 3D-space, as well as appropriately choose the camera and the perspective, and utilize various shading-techniques and lighting-models to adapt all steps on the way to the displayed 2D-Image.

3 **Recommended prerequisites for participation**
Recommended:
- Programming
- Basic algorithm and data structure
- Linear algebra
- Analysis
- Topics of lecture Visual Computing

4 **Form of examination**
Course related exam:
- [20-00-0040-iv] (Technical examination, Oral/written examination, Default RS)
The form of the examination will be announced at the beginning of the course. One or a combination of max. two of the following forms is possible.

Written exam (duration 60 or 90 or 120 minutes), oral exam (duration 15 or 30 minutes), homework (optional: including tests).

5 **Prerequisite for the award of credit points**
Pass exam (100%).

6 **Grading**
Course related exam:
- [20-00-0040-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**
B. Sc. Informatik
M. Sc. Informatik
M. Sc. Computer Science
M. Sc. Autonome Systeme und Robotik
M. Sc. IT Sicherheit

May be used in other degree programs.

8 **Grade bonus compliant to §25 (2)**
In this course a crediting of lecture-accompanying achievements takes place, which can lead to a grade improvement of up to 1.0 according to 25(2) of the 6th amendment of the General Examination Regulations of the TU Darmstadt and the crediting rules decided by the Department of Computer Science on July 14, 2022.

## 1 Teaching content
- Basics of perception
- Basic Fourier transformation
- Images, filtering, compression & processing
- Basic object recognition
- Geometric transformations
- Basic 3D reconstruction
- Surface and scene representations
- Rendering algorithms
- Color: Perception, spaces & models
- Basic visualization

## 2 Learning objectives
After successful participation in the course students are able to describe the foundational concepts as well as the basic models and methods of visual computing. They explain important approaches for image synthesis (computer graphics & visualization) and analysis (computer vision) and can solve basic image synthesis and analysis tasks.

## 3 Recommended prerequisites for participation
Recommended:
Participation of lecture “Mathematik I/II/III”.

## 4 Form of examination
Course related exam:
- [20-00-0014-iv] (Technical examination, Oral/written examination, Default RS)

## 5 Prerequisite for the award of credit points
Pass exam (100%)

## 6 Grading
Course related exam:
- [20-00-0014-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

## 7 Usability of the module
- B.Sc. Informatik
- B.Sc. Wirtschaftsinformatik
- B.Sc. Psychologie in IT
- Joint B.A. Informatik
- B.Sc. Sportwissenschaft und Informatik
- M.Sc. Sportwissenschaft und Informatik
- B.Sc. Computational Engineering
- B.Sc. Informationssystemtechnik

May be used in other degree programs.

## 8 Grade bonus compliant to §25 (2)
In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.

1. **Teaching content**
   - Fundamentals of image processing:
     - Image properties
     - Image transformations
     - Simple and complex filtering
     - Image compression,
     - Segmentation
     - Classification

2. **Learning objectives**
   After successfully completing the course, students have an overview over the mechanisms used in and the abilities of modern image processing techniques. They are able to solve basic to medium level problems in image processing.

3. **Recommended prerequisites for participation**

4. **Form of examination**
   Course related exam:
   - [20-00-0155-iv] (Technical examination, Oral/written examination, Default RS)

1 Teaching content
- Basics of image formation
- Linear and (simple) nonlinear image filtering
- Foundations of multi-view geometry
- Camera calibration and pose estimation
- Foundations of 3D reconstruction
- Foundations of motion estimation from video
- Template and subspace methods for object recognition
- Object classification with bag of words
- Object detection
- Basics of image segmentation

2 Learning objectives
After successfully attending the course, students are familiar with the basics of computer vision. They understand fundamental techniques for the analysis of images and videos, can name their assumptions and mathematical formulations, as well as describe the resulting algorithms. They are able to implement these techniques in order to solve basic image analysis tasks on realistic imagery.

3 Recommended prerequisites for participation
Participation of lecture Visual Computing is recommended.

4 Form of examination
Course related exam:
- [20-00-0157-iv] (Technical examination, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

---

1 Teaching content
- Computer vision as (probabilistic) inference
- Robust estimation and modeling
- Foundations of Bayesian networks and Markov random fields
- Basic inference and learning methods in computer vision
- Image restoration
- Stereo
- Optical flow
- Bayesian tracking of (articulated) objects
- Semantic segmentation
- Current research topics

2 Learning objectives
After successfully attending the course, students have developed a more in-depth understanding of computer vision. They formulate image and video analysis tasks as inference problems, taking challenges of real applications into account, e.g. regarding robustness. They solve the inference problem using discrete or continuous inference algorithms, and apply these to realistic imagery. They quantitatively evaluate the application specific results.

3 Recommended prerequisites for participation
Participation of lecture Visual Computing and Computer Vision I is recommended.

4 Form of examination
Course related exam:
• [20-00-0401-iv] (Technical examination, Oral/written examination, Default RS)

### 1 Teaching content
- Basics of physically based simulation and animation
- Equations of motion and modeling of rigid bodies, mass-spring systems, deformable bodies and fluids
- Approximate numerical methods for the efficient solution of ordinary and partial differential equations
- Parallel computing for physically based simulations
- Collision detection and resolution

### 2 Learning objectives
After completing the module successfully, the students can
- Describe requirements for methods of physically based simulations for computer animation
- Apply concepts of physically based simulations
- Transfer learned concepts to other simulation applications
- Evaluate the suitability of algorithms and numerical methods for physically based simulation
- Describe open research questions in physics-based simulation and animation

### 3 Recommended prerequisites for participation
- Basic knowledge of numerical computing, algorithms and data structures, computer graphics

### 4 Form of examination
Course related exam:
- [20-00-0682-iv] (Technical examination, Oral/written examination, Default RS)

### 5 Prerequisite for the award of credit points

PD Dr.-Ing. Stefan Göbel

1 Teaching content
In this project the students will design concepts and implement prototypes in the field of serious games (e.g. in education, health and sports).

The topics relate to current research questions in the field, partly in cooperation with partners from the games industry and/or Serious Games users.

2 Learning objectives
After successfully attending the course, the students can conceptualize and prototypically implement practical tasks in the context of “Serious Games”. Additionally they acquire practical knowledge in the area of project management, which they can apply to their own topic as well as transfer it to future projects. Besides, the students are able to present their findings in front of an audience applying a number of different presentation techniques and to actively participate in a scientific discussion on their topic.

3 Recommended prerequisites for participation
Programming skills (the language will depended on the topic and may be chosen at will for certain topics).

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Pass exam (100%)

6 Grading
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
B.Sc. Informatik
M.Sc. Informatik
B.Sc. Computational Engineering
M.Sc. Computational Engineering
M.Sc. Wirtschaftsinformatik
B.Sc. Psychologie in IT
Joint B.A. Informatik
B.Sc. Sportwissenschaft und Informatik
M.Sc. Sportwissenschaft und Informatik

Can be used in other degree programs.

8 Grade bonus compliant to §25 (2)

1. **Teaching content**
   In this seminar the students will analyze and discuss the current state of the art for serious games (e.g. in education, health and sports).
   The topics relate to current research questions in the field, partly in cooperation with partners from the games industry and/or Serious Games users.

2. **Learning objectives**
   After successfully completing this course the students are able to become acquainted with an unfamiliar subject in the field of “Serious Games”. They are familiar with library research techniques for scientific papers and industry sources. The techniques and results mentioned in these references can be summarized, assessed and compared to each other. Besides, the students are able to present their findings in front of an audience applying a number of different presentation techniques and to actively participate in a scientific discussion on their topic.

3. **Recommended prerequisites for participation**

4. **Form of examination**
   Course related exam:
   - [20-00-0328-se] (Study achievement, Oral/written examination, Default RS)

5. **Prerequisite for the award of credit points**
   Pass exam (100%)

6. **Grading**
   Course related exam:
   - [20-00-0328-se] (Study achievement, Oral/written examination, Weighting: 100 %)

7. **Usability of the module**
   B.Sc. Informatik  
   M.Sc. Informatik

1 **Teaching content**
   Introduction to the topic of "Serious Games": scientific and technical foundations, application areas and trends. Individual lectures include:
   - Introduction to Serious Games
   - Game Development, Game Design
   - Game Technology, Tools and Engines
   - Personalization and Adaptation
   - Interactive Digital Storytelling
   - Authoring and Content Generation
   - Multiplayer Games
   - Game Interfaces and Sensor Technology
   - Effects, Affects and User Experience
   - Mobile Games
   - Serious Games Application Domains and Best Practice Examples

   The exercise consists of theoretical and practical parts. Students are taught how to use a Game Engine.

2 **Learning objectives**
   After successfully completing this course the students are able to explain the concept of “Serious Games” and can transfer it to different application domains (like education or health). They can describe the general approach for developing computer games and can apply basic principles of game design, personalisation / adaptation and interactive digital storytelling. Aside from that students are able to sketch out other current research questions regarding Serious Games as well as their solutions.

3 **Recommended prerequisites for participation**

4 **Form of examination**
   Module exam:
   - Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)
   The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 8 students register, the examination will be an oral examination (duration: 30 min.). The type of examination will be announced in the beginning of the lecture.

5 **Prerequisite for the award of credit points**
   Pass exam (100%)

6 **Grading**
   Module exam:
   - Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

## 1 Teaching content

### A Basics
- Scene Representation 2D and 3D Geometry
- Image Acquisition
  - Geometric Projections Camera Calibration
- Objective and Illumination
- Discrete 2D signals
  - Separability, Sampling
  - Transformation, Interpolation
  - Convolution, Correlation
  - Discrete Fourier Transformation

### B Basics of Image Analysis
- Filtering
  - Basics 2D Filter Design
  - Linear Filtering
  - Nonlinear Filtering
- Image Decompositions
  - Multi-scale Representation
  - Pyramids
  - Filter Banks
- Image Features
  - Structure
  - Moments, Histograms

## 2 Learning objectives
After successful completion, the module teaches mathematical basics needed to solve computer vision problems in the field of engineering. The focus is on methods that are relevant for measuring and control tasks. Applications range from visual quality inspection, visual robotics, photogrammetry, visual odometry up to visually guided driver assistance etc.

The students should obtain a good understanding for the relations between the three-dimensional world and its two-dimensional projection onto the image plane of a camera. They also should learn about methods that exist to infer knowledge from the world given image data. They should develop some feeling for the different kinds of problems that arise in computer vision and how to choose an efficient solution in terms of algorithms.

## 3 Recommended prerequisites for participation

## 4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)
The examination takes place in form of a written exam (duration: 90 minutes). If one can estimate that less than 10 students register, the examination will be an oral examination (duration: 30 min.). The type of examination will be announced in the beginning of the lecture.

## 5 Prerequisite for the award of credit points
Passing the final module examination

## 6 Grading
Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
MSc ETIT, MSc iST, MSc CE, MSc iST

8 Grade bonus compliant to §25 (2)

1 Teaching content
This course covers a broad range of techniques to capture and model our world with a focus on application in computer graphics and computer vision. This includes:
- basic tools and calibration techniques required in capturing applications
- capturing and modeling techniques for various object properties (such as geometry and reflectance)
- basic set of relevant mathematical modeling and optimization techniques
- implementation and practical application of several techniques

2 Learning objectives
After successful completion of the course, students are able to analyze digitization and modeling problems for objects and scenes in computer graphics and computer vision as well as the underlying techniques. They are able to develop new setups, perform experiments and evaluate the results.

3 Recommended prerequisites for participation
Recommended:
Participation in lecture Graphische Datenverarbeitung I or Computer Vision I
Basic knowledge in C/C++

4 Form of examination
Course related exam:
- [20-00-0489-iv] (Technical examination, Oral/written examination, Default RS)

1 **Teaching content**
- parametric curve models
- parametric surface models
- topology and volumetric CAD models
- CAD operations on surfaces
- tessellation
- approximation of curves and surfaces
- finite element method and computational fluid dynamics
- various applications from the area of CAD

2 **Learning objectives**
After successfully attending the course, students understand the foundations of computer-aided methods for geometric modelling and simulation. They understand multiple parametric representations for curves and surfaces and are able to analyze and compare them. They know classical data structures and algorithms from computer aided design (CAD). They can use the presented techniques to model and visualize 3D geometry.

3 **Recommended prerequisites for participation**
Basic knowledge in Computer Science.

4 **Form of examination**
Course related exam:
- [20-00-0140-iv] (Technical examination, Oral/written examination, Default RS)

1 **Teaching content**
- foundations of massively parallel processors with a focus on modern accelerator hardware
- parallel algorithms
- efficient programming of massively parallel systems
- practical programming projects co-advised by domain scientists

2 **Learning objectives**
After successful completion of the course, students are able to analyze problems in the context of massively parallel systems. They can develop novel applications and systematically improve their performance. They understand basic parallel algorithms and are able to independently understand and analyze current literature.

3 **Recommended prerequisites for participation**

1 **Teaching content**
   Students work in this lab on selected advanced topics in the area of visual computing. Project results will be presented in a talk at the end of the course. The specific topics addressed in the lab change every semester and should be discussed directly with one of the instructors.

2 **Learning objectives**
   After successful completion of this course, the students will be able to independently analyze and solve an advanced problem in the area of visual computing and to evaluate the results.

3 **Recommended prerequisites for participation**
   - Programming skills, e.g. Java, C++
   - Basic knowledge in Visual Computing
   - Participation in at least one basic lecture and one lab in the area of Visual Computing.

4 **Form of examination**
   Course related exam:
   - [20-00-0537-pr] (Study achievement, Oral/written examination, Default RS)

5 **Prerequisite for the award of credit points**
   Pass exam (100%)

6 **Grading**

## 1 Teaching content
This course starts to detail the principal concepts of Augmented and Virtual Reality in relation to Computer Graphics and Computer Vision. Starting from here basic principles, methods, algorithms as well as relevant standards are discussed. This includes
- VR/AR specific requirements and interfaces
- Interaction technologies (e.g. interaction with range camera technologies)
- Rendering technologies (in particular real-time rendering)
- Web-based VR and AR
- Computer-Vision-based Tracking
- Augmented Reality with range camera technologies
- Augmented Reality on smartphone platforms

The technologies will be illustrated and discussed with the results of actual research projects including in application fields „AR-maintenance support“ and „AR/VR based Cultural Heritage presentation“.

## 2 Learning objectives
After successfully attending the course, students are familiar with the challenges and the requirements of Virtual and Augmented reality applications. They know the standards used for the specification of VR/AR-applications. In particular, the students understand the potential of Computer Vision based tracking and they can decide which methods can be applied in with environment.

## 3 Recommended prerequisites for participation
Grundlagen der Graphischen Datenverarbeitung (GDV)

## 4 Form of examination
Course related exam:
- [20-00-0160-iv] (Technical examination, Oral/written examination, Default RS)

## 5 Prerequisite for the award of credit points
Pass exam (100%)

## 6 Grading
Course related exam:
- [20-00-0160-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

## 7 Usability of the module
B.Sc. Informatik
M.Sc. Informatik
B.Sc. Computational Engineering
M.Sc. Computational Engineering
M.Sc. Wirtschaftsinformatik
B.Sc. Psychologie in IT
Joint B.A. Informatik
B.Sc. Sportwissenschaft und Informatik
M.Sc. Sportwissenschaft und Informatik

May be used in other degree programs.

## 8 Grade bonus compliant to §25 (2)

Prof. Dr. Bernt Schiele

1 Teaching content
This seminar focuses on current research topics and the latest results in the areas of physically-based simulation, animation, real-time rendering and visualization.
- participants independently familiarize themselves with the assigned seminar topic by working with the provided scientific papers (usually texts written in English)
- classification and interpretation of the gathered research results
- preparation of a textual summary and a slide-based presentation on the subject
- presentation in front of an audience with mixed prior knowledge on the topic and discussion

2 Learning objectives
Successful participation in the course enables students to get expertise by working with scientific papers. They can extract the essential aspects of the examined works and are able to concisely present them as textual form and presentation, targeting an audience with mixed prior experience on the subject. The students are able to actively participate in a scientific discussion on the presented topics.

3 Recommended prerequisites for participation
GDV I, (GDV II)

4 Form of examination
Course related exam:
• [20-00-0216-se] (Study achievement, Oral/written examination, Default RS)

5 Prerequisite for the award of credit points
Pass exam (100%)

Module name
Ambient Intelligence

Module nr. 20-00-0390
Credit points 6 CP
Workload 180 h
Self-study 120 h
Module duration 1 Term
Module cycle Every 2. Semester

Language German
Module owner Prof. Dr. Bernt Schiele

1 Teaching content
The course will provide an overview of a new vision for Human-Computer-Interaction (HCI) in which people are surrounded by intelligent and intuitive interfaces embedded in the everyday objects around them. In specific the course addresses the emergence of Ambient Mobility and the ubiquitous, pervasive information access, retrieval and display on mobile devices. It will focus on understanding enabling technologies and studying applications and experiments, and, to lesser extent, it will adress the sociocultural impact. Additional topics of the lecture include system architectures for distributed systems, context awareness and management, user models and their implications, sensing and interaction in smart environments. The lecture discusses recent topics and research projects in the domain of Ambient Intelligence.

2 Learning objectives
After successfully attending the lecture, the students will be able to describe technology trends and research results in the domain of Ambient Intelligence. The most important concepts to create smart environments - intelligent networks and objects, technologies for mobile, augmented reality, ubiquitous and pervasive information spaces, nomadic communications, real-time communication and related middle ware, embedded systems, sensor networks and wearable computing - can be discussed and classified. After completing the practical part, students will be able to plan and realize the different project phases required to develop an Ambient-Intelligence solution.

3 Recommended prerequisites for participation
Master-Students Participation in lecture "Visual Computing“ and „Multimodale Interaktion mit intelligenten Umgebungen“

4 Form of examination
Course related exam:
• [20-00-0390-iv] (Technical examination, Oral/written examination, Default RS)

1. **Teaching content**
   Foundations of the various object- and surface-representations in computer graphics. Curves and surfaces (polynomials, splines, RBF) Interpolation and approximation, display techniques, algorithms: de Casteljau, de Boor, Oslo, etc. Volumes and implicit surfaces. Visualization techniques, iso-surfaces, MLS, surface rendering, marching cubes. Meshes, mesh compression, mesh simplification, multiscale expansion, subdivision. Pointclouds: rendering techniques, surface reconstruction, voronoi-diagram and delaunay-triangulation.

2. **Learning objectives**
   After successful completion of the module, students are able to handle various object- and surface-representations, i.e., to use, adapt, display (render), and effectively store these objects. This includes mathematical polynomial representations, iso-surfaces, volume representations, implicite surfaces, meshes, subdivision control meshes and pointclouds.

3. **Recommended prerequisites for participation**
   Recommended:
   - Algorithmen und Datenstrukturen
   - Grundlagen aus der Höheren Mathematik
   - Graphische Datenverarbeitung I
   - C / C++

4. **Form of examination**
   Course related exam:
   - [20-00-0041-iv] (Technical examination, Oral/written examination, Default RS)
   The form of the examination will be announced at the beginning of the course. One or a combination of max. two of the following forms is possible.
   Written exam (duration 60 or 90 or 120 minutes), oral exam (duration 15 or 30 minutes), homework (optional: including tests).

5. **Prerequisite for the award of credit points**
   Pass exam (100%)

6. **Grading**
   Course related exam:
   - [20-00-0041-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

7. **Usability of the module**
   B. Sc. Informatik
   M. Sc. Informatik
   M. Sc. Computer Science
   M.Sc. IT Sicherheit
   May be used in other degree programs.

8. **Grade bonus compliant to §25 (2)**
   In this course a crediting of lecture-accompanying achievements takes place, which can lead to a grade improvement of up to 1.0 according to 25(2) of the 6th amendment of the General Examination Regulations of the TU Darmstadt and the crediting rules decided by the Department of Computer Science on July 14, 2022.

**Module owner**
Prof. Ph. D. Stefan Roth

### Teaching content
- Refresher of probability & Bayesian decision theory
- Directed and undirected models and their properties
- Inference in tree graphs
- Approximate inference in general graphs: Message passing and mean field
- Learning of directed and undirected models
- Sampling methods for learning and inference
- Modeling in example applications, including topic models
- Deep networks
- Semi-supervised learning

### Learning objectives
After successfully attending the course, students have developed an in-depth understanding of probabilistic graphical models. They describe and analyze properties of graphical models, and formulate suitable models for concrete estimation and learning tasks. They understand inference algorithms, judge their suitability and apply them to graphical models in relevant applications. Moreover, they determine which learning algorithms are suitable to estimate the model parameters from example data, and apply these.

### Recommended prerequisites for participation
Recommended: Participation in “Statistisches Maschinelles Lernen”.

### Form of examination
Course related exam:
- [20-00-0449-iv] (Technical examination, Oral/written examination, Default RS)

### Prerequisite for the award of credit points
Pass exam (100%)

1. **Teaching content**
   Students work in this lab on selected topics in the area of visual computing. Project results will be presented in a talk at the end of the course. The specific topics addressed in the lab change every semester and should be discussed directly with one of the instructors.

2. **Learning objectives**
   After successful completion of this course, the students will be able to independently analyze and solve a problem in the area of visual computing and to evaluate the results.

3. **Recommended prerequisites for participation**
   - Practical programming skills, e.g. Java, C++
   - Basic knowledge or interest within Visual Computing
   - Participation in one basic lecture within Visual Computing

4. **Form of examination**
   Course related exam:

1 Teaching content
Image analysis & processing deals with the investigation of images and the application of specific tasks on them, like enhancement, denoising, deblurring, and segmentation. In this course, mathematical methods that are commonly used are presented and discussed. The focus will be on the axiomatic choice for the models, their mathematical properties, and their practical use.
Some key words:
- Filtering (Edge detection, enhancement, Wiener, Fourier, ...)
- Images & Observations: Scale space, regularisation, distributions
- Objects: Differential structure, invariants, feature detection
- Deep structure: Catastrophes & multi-scale hierarchy
- Variational Methods & Partial Differential Methods: Perona Malik, anisotropic diffusion, total variation, Mumford-Shah, Chan-Vese, geometric PDEs, level sets
- Curve Evolution: Normal motion, mean curvature motion, Euclidean shortening flow.

2 Learning objectives
After successful participation in the course students are able to describe the foundational mathematical concepts as well as the basic models and methods of image analysis and processing. They explain important approaches for scale space and PDE methods and can evaluate, transfer, and explain representative technical papers.

3 Recommended prerequisites for participation

4 Form of examination

#### 1 Teaching content
This seminar is targeted at computer science students with an interest in information visualization, in particular the visualization of extremely large data. Students will analyze and present a topic from visual analytics. They will also write a paper about this topic.

#### 2 Learning objectives
After successfully completing the course, students are able to analyze and understand a scientific problem based on the literature. Students are able to present and discuss the topic.

#### 3 Recommended prerequisites for participation
Interesse sich mit einer graphisch-analytischen Fragestellung bzw. Anwendung aus der aktuellen Fachliteratur zu befassen. Vorkenntnisse in Graphischer Datenverarbeitung, Informationssysteme oder Informationsvisualisierung

#### 4 Form of examination
Course related exam:
- [20-00-0268-se] (Study achievement, Oral/written examination, Default RS)

#### 5 Prerequisite for the award of credit points
Pass exam (100%)

#### 6 Grading

1. **Teaching content**
   The students will be enabled to create animations of algorithms and data structures to enhance the learning process. The contents will be usable for studying the topics covered and can be used in the ICS / GdI 2 lecture. The competencies gained especially include:

   * Becoming familiar with a complex software system for animating algorithms and data structures
   * Familiarization with a scripting language, a Java-based API and a framework for generators for creating animations.
   * Design and implementation of at least two generators for algorithm or data structure animations
   * Learning criteria for determining if animations support learning processes
   * Creation and provision of contents ready for use in teaching and self-study
   * Competent use of the CS learning platform for submitting feedback and finished tasks

2. **Learning objectives**
   After taking part in this lab, students will be able to...
   - use the provided API for animating algorithms.
   - analyze a given algorithm with regard to its central elements.
   - construct one visualization each for the central elements of two chosen algorithms.
   - generalize the generated visualizations by an appropriate support of adjustable parameters.
   - critically reflect whether the created visualization will support the learning process of the viewer.

3. **Recommended prerequisites for participation**
   Participants need good Java programming skills and should be familiar with the algorithms and data structures taught in ICS 2.

4. **Form of examination**
   Course related exam:
   - [20-00-0344-pr] (Study achievement, Oral/written examination, Default RS)

5. **Prerequisite for the award of credit points**
   Pass exam (100%)

6. **Grading**

## 1 Teaching content
Developing user-centered software leads to a more efficient usage and increases the acceptance by the human user. The higher acceptance leads to a better dissemination and exploitation of the developed solutions. The lecture “User Centered Design in Visual Computing” aims at enabling students from the department of computer science to acquire knowledge about models, methods, and techniques for user-centered development of visualizations and interactive visual representations. This course will introduce methods that lead to designing more efficient solutions with higher acceptance. Furthermore, the lecture will explain evaluation methods that allow measuring acceptance and efficiency. User Centered Design introduces the mentioned topics with a special focus on visual computing and graphical user interfaces.

Content:
- Usability
- User experience
- Task analysis
- User interfaces
- Interaction design
- Prototyping
- Graphics design and information visualization
- Evaluation during and after software development
- Applications and examples

## 2 Learning objectives
After a successful participation, students will be able to:
- Identify and argue about adequate methods for developing user-centered software
- Apply techniques for user-centered visual interfaces
- Identify and choose adequate evaluation methods for the chosen techniques in the different stages of software development
- Recommend improvements for information acquisition and navigation based on studies and evaluations

## 3 Recommended prerequisites for participation
- Basics of visual computing, as e.g. taught in the introductory course HCS and in the course GDV I

## 4 Form of examination
Course related exam:
- [20-00-0793-iv] (Technical examination, Oral/written examination, Default RS)

## 5 Prerequisite for the award of credit points
Pass exam (100%)  

## 6 Grading
Course related exam:
- [20-00-0793-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

## 7 Usability of the module
B.Sc. Informatik
M.Sc. Informatik
M.Sc. Wirtschaftsinformatik
B.Sc. Psychologie in IT
M.Sc. Psychologie in IT
Joint B.A. Informatik
B.Sc. Sportwissenschaft und Informatik
M.Sc. Sportwissenschaft und Informatik

Can be used in other degree programs.

8 Grade bonus compliant to §25 (2)
In dieser Vorlesung findet eine Anrechnung von vorlesungsbegleitenden Leistungen statt, die lt. 25 (2) der 5. Novelle der APB und den vom FB 20 am 30.3.2017 beschlossenen Anrechnungsregeln zu einer Notenverbesserung um bis zu 1.0 führen kann.

#### Teaching content
You might have previously heard of or even tried out virtual/augmented reality, 3D printing, wearable or tangible user interfaces. The area of Human-Computer Interaction covers all these exciting topics and offers an opportunity to build new prototypes and try them out with people in the user studies. If you would like to better connect theory and practice in the area of Human-Computer Interaction (HCI), then the course of Hands-On Human-Computer Interaction (Hands-On HCI) is for you. The goal of the class is to walk you through the whole research cycle in HCI. It can play a great preparation role for your future bachelor/master thesis in HCI or lay a first brick in your academic path after finishing your studies.

#### Learning objectives
After completing the module, students can
- differentiate between and apply three approaches to HCI research.
- distinguish three types of empirical research.
- effectively read a scientific publication.
- differentiate between types of HCI contributions.
- Formulate and define research questions, hypotheses and experimental variables.
- create a suitable study design based on the previously developed research questions.
- conduct a study using quantitative and qualitative methods to collect data.
- Analyze, evaluate and interpret quantitative data on the basis of statistical methods.
- Analyze and interpret qualitative data on the basis of grounded theory.
- Understand the peer review process and write reviews for a scientific publication.
- Understand and apply evaluation techniques with and without users.
- Write the knowledge gained as a scientific publication and present it to a specialist audience.

#### Recommended prerequisites for participation
Recommended: Human-Computer Interaction (TK2)

#### Form of examination
Course related exam:
- [20-00-1116-iv] (Technical examination, Oral/written examination, Default RS)
The form of the examination will be announced at the beginning of the course. One or a combination of max. two of the following forms is possible.
Written exam (duration 60 or 90 or 120 minutes), oral exam (duration 15 or 30 minutes), homework (optional: including tests).

#### Prerequisite for the award of credit points
Pass exam (100%)

#### Grading
Course related exam:
- [20-00-1116-iv] (Technical examination, Oral/written examination, Weighting: 100 %)

#### Usability of the module
B.Sc. Informatik
M.Sc. Informatik
May be used in other degree programs.

#### 1 Teaching content
This course serves as an introduction into studies of business administration for students of other sciences. The course will provide a broad spectrum of knowledge from the "birth" of business administration as an university science field until its fragmentation into many specialized disciplines. Core topics will include basics of business administration (definitions and German legal forms), some Marketing concepts, introduction into Production Management (business process optimization and quality management), basic knowledge of organisational and personnel related topics, fundamental concepts of finance and investment as well as internal and external reporting standards.

#### 2 Learning objectives
The course encourages students who have not been confronted with business studies before to think economically. Furthermore, it should enable students to better understand actions of managers and corporations in general.

After the course students are able to
- comprehend the development in the history of business administration,
- apply essential marketing concepts,
- use fundamental methods in production management,
- economically valuate investment alternatives and
- understand important interrelations in financial accounting.

#### 3 Recommended prerequisites for participation
None

#### 4 Form of examination
Module exam:
- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

#### 5 Prerequisite for the award of credit points
Passing the examination

#### 6 Grading
Module exam:
- Module exam (Technical examination, Examination, Weighting: 100 %)

#### 7 Usability of the module

#### 8 Grade bonus compliant to §25 (2)

#### 9 References

Further literature will be announced in the lecture.

### 1 Teaching content
Financial Accounting: Fundamentals of accounting and bookkeeping, inventory, balance sheet, recording of assets and debt, recording of expenses and revenues, selected transactions (sales and purchases, non-current assets, current assets, accruals, wage and salary, distribution of earnings), annual closing entry.

### 2 Learning objectives
After the course students are able to
- understand the core principles of bookkeeping, inventory and preparation of the balance sheet
- book stocks and profit
- solve specific bookkeeping problems in the fields of sales and purchases, non-current and current assets, accruals, wage and salary, distribution of earnings
- understand of the steps prior to the preparation of annual financial statements according to the German Commercial Code (HGB)
- analyze of the recognition and measurement of assets and liabilities
- understand of Income statements, notes and management reports
- solve accounting cases in the context of the German Commercial Code (HGB)

### 3 Recommended prerequisites for participation
Prerequisites: none
Previous Knowledge: see initial skills

### 4 Form of examination
Module exam:
- Module exam (Technical examination, Written examination, Duration: 90 Min., Default RS)
- Module exam (Study achievement, Oral/written examination, Duration: 45 Min., Default RS)

Supplement to Assessment Methods:
The academic achievement needs to be passed to take part in the module exam.

### 5 Prerequisite for the award of credit points
Passing the Examination

### 6 Grading
Module exam:
- Module exam (Technical examination, Written examination, Weighting: 2)
- Module exam (Study achievement, Oral/written examination, Weighting: 1)

### 7 Usability of the module
B.Sc. Wirtschaftsingenieurwesen, B.Sc. Wirtschaftsinformatik

### 8 Grade bonus compliant to §25 (2)

Prof. Dr. rer. pol. Andreas Pfnür

### Teaching content
Basic concepts, project organisation, planning a work breakdown structure, quantity and cost estimation, time, cost and capacity planning, project control, project risk management, financial planning of projects, selected problems of project leadership, Selected applications and case studies from project management

### Learning objectives
After the course students are able to
- understand the basic tasks and challenges of project management,
- know different alternatives of the organization of the project management and to evaluate their specific advantages and disadvantages,
- demonstrate the various ways in which project committees can be set up and how they can be integrated into a company's organisation,
- understand and develop a project structure plan,
- understand and evaluate the procedures for estimating quantities and project costs,
- apply and evaluate state-of-the-art models and procedures for time, cost and resource planning,
- carry out in-depth procedures of project controlling and to learn how to apply them in specific situations.
- understand the basics of financial planning of a project.
- understand selected problems of project management.

### Recommended prerequisites for participation
Prerequisites: none
Previous Knowledge: see initial skills

### Form of examination
Module exam:

1 Teaching content  
The lecture Technology and Innovation Management is designed for the students to learn about the challenges of managing innovation. Organizational change and innovation are the basic requirements for competitiveness and success of businesses. However, in most industries innovation is often paired with organizational challenges and barriers. In this lecture, students get to know the fundamental concepts and design of Innovation Management and the innovation process (form initiative to implementation), as well as the interaction of central actors. Furthermore, this lecture provides insights into the specialisations Innovation Behaviour and Strategic Technology and Innovation Management.

2 Learning objectives  
After the course the students are able to  
• identify and evaluate problems emerging from managing innovation.  
• explain, evaluate and apply theories of Technology and Innovation Management.  
• evaluate fundamental design factors of corporate innovation systems.  
• derive improvement procedures for innovation processes in firms.  
• apply tools of technology management.  
• make relevant recommendations for corporate practice.

3 Recommended prerequisites for participation  
Prerequisites: none  
Previous Knowledge: see initial skills

4 Form of examination  
Module exam:  
• Module exam (Technical examination, Oral/written examination, Default RS)  
Supplement to Assessment Methods  
Oral/written: Type and duration of exam are announced by the beginning of the course  
Written: exam (duration 60 - 90 minutes)  
Oral: team or individual exam (duration 15 - 20 minutes per participant)

5 Prerequisite for the award of credit points  
Passing the Examination

6 Grading  
Module exam:  
• Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module  

8 Grade bonus compliant to §25 (2)

#### Module owner
Prof. Dr. Alexander Kock

## Teaching content
The lecture offers students an introduction to the topic of innovation management in companies. In times of disruptive and radical innovations, well-founded knowledge in innovation management is an elementary core competence of companies in order to stay competitive. After learning the conceptual basics, students learn about managing the different stages of the innovation process, from initiative to the adoption of an innovation. In addition, strategic aspects and the human side of innovation management will be introduced. The lecture thus forms an excellent thematic orientation and introduction for undergraduate students for the advanced courses of the master studies.

## Learning objectives
After the course students are able to
- give an overview of the components of the innovation process and management.
- identify and evaluate problems that arise in the management of innovations.
- explain, evaluate and apply theories of technology and innovation management.
- assess the basic design factors of a firm's innovation system.
- derive actions to improve innovation processes in companies.
- apply the concepts to practice-relevant questions.

#### Recommended prerequisites for participation
**Prerequisites:** none
**Previous Knowledge:** see initial skills and basics in business administration

## Form of examination
Module exam:
- Module exam (Technical examination, Written examination, Duration: 90 Min., Default RS)

## Prerequisite for the award of credit points
Passing the Examination

Module owner
Prof. Dr. Dr. Ruth Stock-Homburg

1 Teaching content
Leadership:
- Central approaches and theories of employee and team leadership
- Methods of leadership research
- Success factors of employee leadership
- Leadership of the future
- Special application areas of leadership (e.g. regional distributed or virtual leadership)

Future of Work:
- Influence of new technologies and digitization on the world of work
- Future development and design approaches in human resources management
- Approaches to measuring the sustainability of companies and individuals
- Special challenges of the future of work (e.g. telework/well-being, electronic accessibility, new technologies)

2 Learning objectives
After the course students are able to,
- explain, compare and contrast the key theoretical concepts of employee and team leadership.
- apply the instruments and tools available for leading employees and teams.
- assess the challenges of leading employees and teams in an international environment.
- explain important theories, techniques, and concepts about the future of work.
- interpret and reflect on important parameters for the Future Fitness of employees, leaders, and companies.
- better assess where they personally stand in terms of their individual Future Fitness and face the future of work with curiosity.
- reflect on challenges in the future of work.
- apply learned concepts and instruments in case studies.
- connect their knowledge to business cases in presentations of experienced practitioners.

3 Recommended prerequisites for participation
Sufficient English skills to follow the lecture in English and to understand and answer the English-language written exam.

4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Default RS)

Supplement to Assessment Methods
Oral/written: Type and duration of exam are announced by the beginning of the course
Written: exam (duration 60 - 90 minutes)
Oral: team or individual exam (duration 15 - 20 minutes per participant)

5 Prerequisite for the award of credit points
Passing the Examination

Module owner: Prof. Dr. Alexander Kock

1 Teaching content
The lecture offers students an introduction to the topic of innovation management in companies. In times of disruptive and radical innovations, well-founded knowledge in innovation management is an elementary core competence of companies in order to stay competitive. After learning the conceptual basics, students learn about managing the different stages of the innovation process, from initiative to the adoption of an innovation. In addition, strategic aspects and the human side of innovation management will be introduced. The lecture thus forms an excellent thematic orientation and introduction for undergraduate students for the advanced courses of the master studies.

2 Learning objectives
After the course students are able to
• give an overview of the components of the innovation process and management.
• identify and evaluate problems that arise in the management of innovations.
• explain, evaluate and apply theories of technology and innovation management.
• assess the basic design factors of a firm's innovation system.
• derive actions to improve innovation processes in companies.
• apply the concepts to practice-relevant questions.

3 Recommended prerequisites for participation
Prerequisites: none
Previous Knowledge: see initial skills and basics in business administration

4 Form of examination
Module exam:
• Module exam (Technical examination, Written examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points
Passing the Examination

6 Grading
Module exam:
• Module exam (Technical examination, Written examination, Weighting: 100 %)

7 Usability of the module
B.Sc. Wirtschaftsingenieurwesen, B.Sc. Wirtschaftsinformatik

8 Grade bonus compliant to §25 (2)

1 Teaching content
The HIGHEST lecture series introduces students to the process of founding a startup. The aim of the lecture is to raise students' awareness of startup-related topics and entrepreneurial thinking. Various topics of the multi-layered start-up process are discussed and underpinned by numerous exciting examples from practice. The aim is to convey contents that are helpful for a successful founding process and enable entrepreneurial action.

Exemplary topics are:
- writing a business plan, financing, grants and funding programs, founder skills, founder teams,
- idea generation, innovations, investors, creative techniques, marketing and sales in startups,
- ecosystems and networks, legal, social entrepreneurship and more.

Among other things, the lecture series will address these questions:
- What is innovation, and what are the paths to commercialization?
- How does an innovation become a business idea and ultimately a company?
- How do I know I'm a founder?
- What skills and competencies does a founding team need? Who do I involve and who not?
- How do I build a business?
- How do I lead a team?
- How do I get customers?
- How do I do business with other companies?
- What (legal) measures are there to protect my idea or research result?
- What financing options, funding programs or support services are available?
- What should I look out for when approaching financiers and Venture Capitalists?
- How do I negotiate conditions skillfully?
- What are positive examples, pioneers or unicorns and what can I learn from them?

Numerous speakers will be integrated into the lectures to share their experience and ensure a high level of practical relevance.

2 Learning objectives
Through the course, students are better able to assess their own abilities as founders. Students know the opportunities and challenges of the startup process. Students know the individual steps of a startup process and are supported and motivated to pursue their own startups. Students know the network and environment of the TU Darmstadt and know where they can get which support.

3 Recommended prerequisites for participation
The lecture series is suitable for all students (Bachelor/Master) and does not require any special knowledge.

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, p/np RS)

Supplement to Assessment Methods:
Oral/written: Type and duration of exam are announced by the beginning of the course
Written: exam (duration 60 - 90 minutes)
Oral: team or individual exam (duration 15 - 20 minutes per participant)

5 Prerequisite for the award of credit points
Passing the examination

6 Grading
Module exam:
  • Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
General Catalogue of the Department of Law and Economics

8 Grade bonus compliant to §25 (2)

Prof. Dr. rer. pol. Carolin Bock

1 Teaching content
The course "Grundlagen des Entrepreneurship" (Introduction to Entrepreneurship), being part of the module "Grundlagen Entrepreneurship" introduces concepts of entrepreneurship relying on basic concepts and definitions. Hereby, a global and international perspective is taken. The course includes the topics: actions of entrepreneurs, their motivations and idea generating processes, effectuation and causation, their decision-making, and entrepreneurial failure. Concerning entrepreneurial businesses, business planning, growth models, strategic alliances of young ventures, and human and social capital of entrepreneurs are discussed. Further, special types of entrepreneurship are taught. In addition, workshops will give students an insight into practical methods such as design thinking and the implementation and identification of opportunities.

2 Learning objectives
After the course students are able to
- define and describe basic concepts towards entrepreneurship,
- understand the psychologically-related concepts of being an entrepreneur,
- understand and describe the evolution from small firms to multinational enterprises,
- describe special types of entrepreneurship,
- understand basic concepts of entrepreneurial thinking towards idea- and business model creation,
- realize business opportunities and build sustainable business models,
- evaluate chances and risks of national and international markets as well choosing among various market entry strategies,
- incorporate stakeholder feedback into the business model.

3 Recommended prerequisites for participation
Prerequisites: none
Previous Knowledge: see initial skills and basics in business administration

4 Form of examination
Module exam:
- Module exam (Technical examination, Written examination, Duration: 60 Min., Default RS)

Module owner
Prof. Dr. jur. Janine Wendt

1 Teaching content
The lecture is divided into two parts: The first part is an introduction to commercial law. The aim is to understand the importance of contract drafting in a company and to take into account the main aspects of commercial law regulations. The second part is devoted to company law, in particular the law of commercial partnerships and corporations. It also deals with the basic issues of good corporate governance and the importance of compliance. European company law will also be introduced.

Recitation: This course discusses practical cases concerning commercial law and general company law. In preparation for the exam, sample cases will be discussed.

2 Learning objectives
After the course students are able to

- recognise the conditions for the application of commercial law.
- distinguish between the different commercial intermediaries.
- understand the basic structures of the most important forms of partnerships and corporations as legal entities for companies.
- understand the importance of good corporate governance and the importance of compliance for companies.
- deal with different legal texts.
- understand the significance of European legal developments for German law and in particular for the protection of investors.
- understand the context of legal regulations (e.g. sales law + commercial law + company law).
- work on simple facts of the German commercial and company law, as well as the financial market law by applying a legal approach and to compile answers to simple legal questions independently.
- generally recognise, assess and respond to the possibilities and risks of liability in legal matters.

3 Recommended prerequisites for participation
Prerequisites: none
Previous Knowledge: see initial skills and contract law

4 Form of examination
Module exam:
- Module exam (Technical examination, Written examination, Duration: 90 Min., Default RS)

1 Teaching content
The lecture provides a broad insight into the most important legal fields of daily life - e.g.:
- The law of sales contracts
- Tenancy law
- Family law
- Employment law
- Corporate law etc.
These will be illustrated by means of practical cases. Important points of how to frame a contract will be discussed.

2 Learning objectives
The students will acquire knowledge of the basic principles of German civil law.

3 Recommended prerequisites for participation
None

1 **Teaching content**
Digital Product and Service Marketing: Selected topics in the context of digital marketing: including micro and macro environment, digital marketing strategies, the digital marketing mix, digital relationship marketing, communication strategies and channels for digital customers, and evaluation of approaches.

Digital Innovation Marketing: Selected topics in the context of digital innovation marketing, including basic information about innovation, key innovation strategies; important theoretical concepts of innovation management; customer integration in the innovation process; and new innovation types, such as user innovation.

2 **Learning objectives**
After the course students are able to
- recognize the role of digitization for marketing and to estimate potentials.
- evaluate approaches in the context of digital marketing.
- explain different phases and tools for digital marketing.
- explain the process and the organizational design elements of a holistic and customer-oriented innovation management.
- recognize the potential of user innovations and co-opetition
- critically reflect on ethical aspects of marketing.
- apply the concepts and instruments dealt with to practice-oriented questions using specific examples.
- transfer the learned contents to business practice through guest lectures.

3 **Recommended prerequisites for participation**
Marketing

Sufficient English skills to follow the lecture in English and to understand and answer the English-language written exam.

4 **Form of examination**
Module exam:
- Module exam (Technical examination, Oral/written examination, Default RS)

Supplement to Assessment Methods
Oral/written: Type and duration of exam are announced by the beginning of the course
Written: exam (duration 60 - 90 minutes)
Oral: team or individual exam (duration 15 - 20 minutes per participant)

1 Teaching content
The students get an overview of the management of value-added networks. The fundamentals and theories of international management will be covered as well as strategy and strategy design (strategy design at company and business level, strategic analysis, strategic management in multinational companies). Furthermore, fundamentals of organization and organizational design (structural and procedural organization, organization of international networks) are discussed. Regarding methodological knowledge for the management of value-added networks, the fundamentals of planning and decision-making (decision theories and decision techniques) as well as an introduction to simulation modeling is provided to the students.

2 Learning objectives
After the course students are able to
- reproduce basic knowledge on the management of value-added networks
- apply basic knowledge for the management of value-creating networks in practical situations
- apply different decision techniques in real-world examples establish links between the basic knowledge on the management of value-added networks and further courses in business economics
- reproduce the concepts of strategy design conveyed at different levels and to apply them in the context of practice
- understand and reproduce different models for structural and procedural organization

Prof. Dr. jur. Janine Wendt

#### 1 Teaching content
Sustainability and corporate law - definitions and implications of sustainability: conceptualisation through the Brundtland Report as well as the Rio Earth Summit and follow-up summits; conceptual consolidation and Agenda 2030; central features of the concept of sustainability - corporate law as an obstacle or promoter of sustainability - significance of the corporate governance discussion - the shareholder value model: criticism and alternative models - corporate law promotion of sustainability: sustainability and executive remuneration; social responsibility (CSR), supply chain legislation in Germany and Europe; climate change litigation; sustainable finance and social entrepreneurship

#### 2 Learning objectives
After the course students are able to
- distinguish and derive different definitions and conceptualisations of sustainability,
- assess whether corporate law can be judged as an obstacle or a promoter of sustainability,
- present criticism and alternative models of the shareholder value model,
- present different approaches to corporate law promotion of sustainability, including regulation of executive remuneration, social responsibility (CSR) and supply chain legislation in Germany and Europe,
- discuss the main features of climate change litigation,
- classify Sustainable Finance and Social Entrepreneurship,
- understand the tasks, objectives and problems of sustainability management in companies
- assess the design, opportunities and challenges of management systems
- assess the possibilities and limitations of the different instruments of quality and environmental management
- critically analyze approaches from business practice

#### 3 Recommended prerequisites for participation
Prerequisites: none
Previous Knowledge: see initial skills

#### 4 Form of examination
Module exam:
- Module exam (Technical examination, Oral/written examination, Default RS)

Supplement to Assessment Methods
Oral/written: Type and duration of exam are announced by the beginning of the course
Written: exam (duration 60 - 90 minutes)
Oral: team or individual exam (duration 15 - 20 minutes per participant)

#### 5 Prerequisite for the award of credit points
Passing the Examination

#### 6 Grading
Module exam:
• Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module

8 Grade bonus compliant to §25 (2)

9 References
Mittwoch, Nachhaltigkeit und Unternehmensrecht (2022)

Further literature will be announced in the lecture.

Prof. Dr. rer. nat. Sascha Preu

1 Teaching content

1. Introduction: Semiconductor Devices & Microelectronic
2. Semiconductor: Materials, Physics & Technology
3. PN-Junction
4. Metal-Oxide-Semiconductor Capacity
5. Schottky Contact
6. MOS-Field-Effect-Transistor (MOSFET)
7. CMOS: Digital Applications
8. MOS-Memory
9. Bipolar-Junction-Transistor
10. Outlook: Scaling Limits & SET, ...

2 Learning objectives

Upon completion of the module, students will have developed an understanding of
- the physical properties and processes in semiconductor devices and materials
- the operation of basic semiconductor devices like diode, MOS-Transistor and bipolar transistor
- the functionality of basic circuits like rectifier circuit and 1-transistor amplifier from the device point of view

Goal: Understand state-of-the art semiconductor devices and circuits as a basis for a successful engineering career

3 Recommended prerequisites for participation

Electrical Engineering and Information Technology I, Electrical Engineering and Information Technology II, Laboratory ETiT, Laboratory Electronics, Mathematics I, Mathematics II, Physics

4 Form of examination

Module exam:
- Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

5 Prerequisite for the award of credit points

Passing the final module examination

6 Grading

Module exam:
- Module exam (Technical examination, Examination, Weighting: 100 %)

7 Usability of the module

BSc ETiT

8 Grade bonus compliant to §25 (2)

Yes

1 **Teaching content**
Practical experience in the methods used for the development of technical products. Work in a project team.

2 **Learning objectives**
After successful completion of the modul, students are able to apply development methodologies to a concrete development project in a team. They can create a schedule, analyze the state of the art, write a list of requirements, abstract a task and work out sub-problems. They can search for solutions using different solution methods, develop optimal solutions using evaluation methods and derive a reasonable overall concept. The students have learned to derive the required parameters needed by calculation and modeling. They can create manufacturing documentation with all necessary documents such as parts lists, technical drawings and circuit diagrams, carry out the construction and examination of a laboratory sample and reflect retrospectively on the development carried out.

3 **Recommended prerequisites for participation**

4 **Form of examination**
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

5 **Prerequisite for the award of credit points**
Passing the final module examination

6 **Grading**
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**
BSc ETiT, BSc WI-ETiT

Prof. Ph.D. Thomas Burg

1 **Teaching content**

Precision engineering enables the repeatable integration of microelectronic and mechanical components with sensors and actuators to create dense and complex electromechanical systems. The applications range from mass products such as smartphones or cars to precision prototypes in medical technology, spaceflight, and scientific instrumentation. The course introduces the principles of design and manufacturing for precision with critical dimensions in the micrometer to millimeter range. Manufacturing methods including casting, molding, sintering, 3D printing, forming, cutting, etching, and joining will be explained. The properties, composition, and modifications of materials (metals and alloys, ceramics, polymers, composites) will be discussed in the context of key manufacturing processes.

2 **Learning objectives**

To be able to classify and explain the most important manufacturing technologies, and to critically assess their respective advantages and disadvantages. To select suitable manufacturing technologies and to design for their application. To make quantitative estimates of the limitations of a given process and to evaluate the potential of new developments based on your knowledge of physical principles and materials.

3 **Recommended prerequisites for participation**

4 **Form of examination**

Module exam:
- Module exam (Technical examination, Oral/written examination, Duration: 90 Min., Default RS)

The examination takes place in form of a written exam (duration: 90 minutes). If enrollment is expected to be less than 6 students, the examination will be an oral examination (duration: 30 min.). The type of examination will be announced at the beginning of the course.

5 **Prerequisite for the award of credit points**

Passing the final module examination

6 **Grading**

Module exam:
- Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 **Usability of the module**

BSc ETIT, MSc MEC, MSc WI-ETIT

8 **Grade bonus compliant to §25 (2)**

Module owner
Prof. Dr. Mario Kupnik

1 Teaching content
The module teaches basic principles of different sensors and the required knowledge for correct application of sensors. With regard to the measurement chain, the focus of the course is on the conversion of any, generally non-electrical quantities into electrically evaluable signals. Resistive, capacitive, inductive, piezoelectric, optical, and magnetic measurement principles are covered in the module to provide knowledge of the measurement of important quantities such as force, torque pressure, acceleration, velocity, displacement, and flow. In addition to a phenomenological description of the principles and a derived technical description, the main elements of primary and secondary electronics for each measurement principle will also be presented and understood. In addition to the measurement principles, the description of errors will be dealt with. In addition to static and dynamic errors, errors in signal processing and error consideration of the entire measurement chain will be discussed. In the exercises the method of peer instruction is utilized.

2 Learning objectives
The students acquire knowledge of the different measuring methods and their advantages and disadvantages. They can understand error in data sheets and descriptions interpret in relation to the application and are thus able to select a suitable sensor for applications in electronics and information, as well process technology and to apply them correctly.

3 Recommended prerequisites for participation
Measuring Technique

4 Form of examination
Module exam:
  • Module exam (Technical examination, Examination, Duration: 90 Min., Default RS)

Prof. Dr. Edgar Dörsam

1 Teaching content
Terminology, process chains, process types, industrial technologies, materials, design, engineering strength, data workflow and data models, potential

2 Learning objectives
On successful completion of this module, students should be able to:
1. Explain all terms of 3D-Printing and Additive Manufacturing.
2. Follow through with a systematic comparison of alternative production methods.
3. Analyze the influence of the materials on the quality of products.
4. Explain the design demands of 3D-parts.
5. Distinguish important aspects of CAD models and voxel models.
6. Show and discuss the potentials of Additive Manufacturing.

3 Recommended prerequisites for participation
Recommended modules are: 16-09-5010 Production Technology, 16-08-3241/5251 Material Science & Engineering I and II, 16-07-3011 Information and Communication Technology in Mechanical Engineering and 16-07-5020 Computer Aided Design.

4 Form of examination
Module exam:
• Module exam (Technical examination, Oral/written examination, Default RS)
Facultative (written 90 min or oral exam 30 min)
Will be announced at the beginning of the term depending on the circumstances (number of students, pandemic etc.).

5 Prerequisite for the award of credit points
Passing the examination

6 Grading
Module exam:
• Module exam (Technical examination, Oral/written examination, Weighting: 100 %)

7 Usability of the module
WP Bachelor MB

8 Grade bonus compliant to §25 (2)

9 References

1. **Teaching content**
   - Structure and functionality of the human eye, terms and unit in lighting technology, photometry, radiometric and photometric properties of materials, filters, physiology of vision, colour theory, lighting, light sources.
   - Measurement of luminous flux, luminous intensity, illuminance, luminance, determination of the spectral responsivity function of the human eye, colorimetry colour rendering, colour as traffic signals, measuring of optical material characteristics, LED properties

2. **Learning objectives**
   - On completion of the module students will have learned the following:
     - To list and connect terms, units and radiometric and photometric properties of materials in lighting technology
     - To describe and understand structure and functionality of the human eye and the physiology of vision
     - To illustrate basics of lighting, measuring methods and application.
   - They are able to measure base items in lighting technology, applying knowledge of lighting and enhance them with experiments and have developed a better understanding for light and color.

3. **Recommended prerequisites for participation**
   - MSc ETiT, MSc Wi-ETiT, MSc MEC

4. **Form of examination**
   - Module exam (Technical examination, Oral examination, Duration: 30 Min., Default RS)

5. **Prerequisite for the award of credit points**

### 1 Teaching content
Classification of 3D printing in manufacturing technology; requirements; selection; workflow; independent realization of products; justification of approach and chosen production process

### 2 Learning objectives
On successful completion of this module, students should be able to:
1. Identify application areas for 3D printing.
2. Choose a suitable 3D printing production process to manufacture parts.
3. Modify part geometry regarding the specific production process.
4. Use common software from the 3D printing workflow.
5. Analyze typical printing errors and modify print parameters.
6. Justify the chosen approach in written form.

### 3 Recommended prerequisites for participation
Participation of lecture „Introduction 3D-Printing and Additive Manufacturing“

### 4 Form of examination
Module exam:
- Module exam (Technical examination, Special form, Default RS)

### 5 Prerequisite for the award of credit points
Passing the final module examination

### 6 Grading
Module exam:
- Module exam (Technical examination, Special form, Weighting: 100 %)

### 7 Usability of the module

### 8 Grade bonus compliant to §25 (2)

### 9 References

German/English

Module owner
Prof. Dr. rer. nat. Markus Meinert

1 Teaching content
In the project seminar, students have the opportunity to deal with various aspects of spintronic devices. These range from the development of measurement systems for the characterization of spintronic devices, to the fabrication and characterization of functional thin film systems, to the lithographic preparation of spintronic sensor devices or memory cell (MRAM) prototypes. Students gain valuable insights into the entire chain of device fabrication from the deposition of atomically thin film systems to their basic characterization and lithography under clean room conditions.

2 Learning objectives
Students learn the basics of fabrication and application of spintronic devices as sensors or magnetic memory cells. Individual projects are carried out in small groups. The students deepen the material learned in the lectures in the form of a project work and learn and deepen their knowledge in the application of electronic measurement technology to answer concrete questions from research and development.

3 Recommended prerequisites for participation
- Introduction to Spintronics (desirable)
- Materials of Electrical Engineering (desirable)

4 Form of examination
Module exam:
- Module exam (Study achievement, Oral/written examination, Default RS)
Report and/or Presentation. The type of examination will be announced in the beginning of the lecture.

5 Prerequisite for the award of credit points
Passing the final module examination

6 Grading
Module exam:
- Module exam (Study achievement, Oral/written examination, Weighting: 100 %)

7 Usability of the module
MSc etit, MSc iCE, BSc/iST, MSc iST

8 Grade bonus compliant to §25 (2)

9 References
Lecture notes Introduction to Spintronics (Meinert), subject-specific literature and publications.
