Winter School on January 6-8th, 2022
On
Nanoengineering: Fundamentals to Applications

About IIT Bombay

IIT, Bombay is recognized worldwide as a leader in the field of engineering education and research. It is the one of the top public universities of India, which is ranked #177 in QS Global World Rankings in 2022.

About the Course

The aim of this school would be to know the fundamentals of material science, the origin of electrical, optical, and mechanical properties, strategies of tailoring properties, modern techniques of patterning at Nano or micro-scale, characterization techniques, applications of Nano engineering materials.

Learning Objectives

To understand nanomaterials & nanostructure and be able to understand how to engineer their properties

Who should Attend

Undergraduate and postgraduate students of Natural science & Engineering with interest in Nanotechnology

Contact Information

Please contact for more information
international@iitb.ac.in

Faculties of Material Science and Engineering, Mechanical Engineering, Physics & Energy Science and Engineering will be involved to deciphering the Nanocode.

Duration of the Course

3 days (24-26 Hours)
